*A>for "one that works".

Subject: HTX202 NOT MODIFIABLE

Greetings HTX-202 Fans:

It seems that human nature dictates that every major item we purchase be "hot rodded" into something other than what the manufacturer intended. Our first car, our first radio, and now: the HTX-202. Regardless of the total lack of necessity for most owners, everyone wants to broad-band the 202.

Perhaps in our evolution, there is a little CB radio mentality left under the surface. Who knows? But hopefully, I can answer a few questions which have yet to be answered to the ham community.

The HTX-202 is based on the ICOM 02AT with certain design modifications besed on Tandy's specs. These variations include encode/decode, additional memories, and a full width LCD display. Contrary to rumor, no part of the radio is Kenwood or Yaesu! ICOM sold the rights to their design to Tandy to do with what they would.

Whan Tandy sought to produce the unit, they went to their usual Korean source for cheap gadgetry: MAXON. Maxon then built the 202 for Tandy, under license from Icom. The HTX-202 is surprisingly sturdy, and well constructed, considering that Maxon has the worst quality control in the industry.

Be that as it may, before Tandy would produce the 202, certain specs had to be met. Foremost, after the repercussions from their 10-meter rig, Tandy insisted that the 202 NOT BE CAPABLE OF MODIFICATION! Period.

This worked out well, as the tighter bandpass gives the 202 it's exceptional selectivity and immunity to intermod. When you brag to your friends about your tight front-end, just remember that the cost of this important function, is the lask of ability to kerchunk your local police department's repeater. Why complain anyway?

Most 202's will not take a BP-7 Icom pack. The BP-8 usually works well. If the Zener diode in the bottom-feed circuit is bad, only a 9.6-vdc pack or less will work. A minor headache at the very least.

ALWAYS: Slide off your NiCad pack when using external DC power from your vehicle or a power supply! Leaving the pack on while mobile puts too much burden on the Zener diodes, and generates heat at twice the normal rate. Save your radio... Take off the pack!

Unlike it's Icom brother, the 202 will not top charge an Icom pack while on external DC power. Refer to the warning above!

HIDDEN FUNCTION: Holding the <F>unction button while depressing the <L>ight button will cause the display lighting to remain on until the <L>ight button is pressed again.

HELPFUL HINT: Discard your belt clip... Install a commercial H.T. "D-swivel" available at any FM 2-way Business Radio dealer. Add the mount to your belt, and VOILA... No more dropped radios.

WARNING: DO NOT ATTEMPT TO BOTTOM-CHARGE THE STOCK NICAD PACK IN AN ICOM BC-35 OR CLONE CHARGER. NEVER, NEVER, NEVER!

DESIGN FLAW: Some early production (S/N 2500 and down) radios had the NiCad Zener Diode located too close to the finals, causing final transistor failure when used on external DC with the pack in place. This was remedied in production, and Tandy will remedy under warranty.

Hopefully, this will address all remaining questions and rumors in regard to the HTX-202. It can't be modified. Big deal! It is a sturdy, well-built, dependable radio and a bargain at the price. Be happy with a great deal on a great radio. My HTX-202 got me through in an emergency situation, where my 800-MHz commercial trunked radio failed... That's more than enough for me!

----- 73 de Jim. N9PEK @ WB9SLE.IL.USA.NA

P.S.: TNX Tandy... For once, I'm a happy customer!

Dan:

I own an '88 Camry (4 cy.) and I've been running a 50 watt Kenwood 2m OK for the past 6 years. The antenna is a mag-mount located on the trunk lid. Be sure you run the DC leads _directly_ from the rig to the 12v battery terminals and fuse both lines (don't use the car chassis as a ground return).

Just voice? Does this imply that such actions are ok in the CW/Digital portions of the bands?

Do you really want to invoke the name of your father and grandfather in all of this?

I'm trying to figure out who is doing all the "sniviling" here.

Got a bad toe? Cut off the leg! Perfect solution. STUPID solution. About as stupid as banning bulletins below 30Mhz. Apparently K1MAN doesn't own a frequency but you have some sort of "land grant" rights to one yourself handed down through generations of hams.

I don't approve of K1MAN's tactics, and find his actions distateful. But this effort by W5YI and others to pursue personal vendetta through rule making that impacts ALL amateurs is equally distateful... no, its even worse. MAN negatively impacts a few hams on a few frequencies. Your position unlitaterally and unfairly impacts the entire amateur population.

1196. ICOM 751 HF rig problem

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-18 00:00:00 UTC
From: "Alistair S. Fairweather" <fairweather@taz.dra.hmg.gb>
Message-ID: <3n0iau$tsa@trog.dra.hmg.gb>
Source record: 248338

Hi All,

I have an ICOM 751 that has developed a problem with its display, in that after it has been switched on for a couple of minutes most of the frequency digits disappear. This can be cured for a couple of minitues by switching the rig off and on again. I seem to remember reading somthing a while back that this was a common problem with ICOM electro-luminescent displays and was caused by some electrolytic capacitors in the ELD HV inverter drying up. Can anyone confirm if this is the case?. And if so what are the circuit designations of the capacitors that need replacing?.

Does ICOM have an E-mail address where I can contact them direct?

regards

Alistair (G7GAR) QTHR

Mike you miss the point!

I don't really care if the Shack is in or out of the Ham
business. The point was the wishful rumor mongering that the
HTX-212 was a Motorola or Yaesu or Kenwood; take your choice
all theories had been promoted.

The radio good, bad or indifferent is not any of the above;
and all the Ratophile whining will not change this fact.

It is another Korean knock off "Custom manufactured for Radio Shack"
This is the truth of the matter can we now end the speculation.

1201. Where is KR1S

In reference to the "racket on 40meters", the noise is most likely over the horizon back-scatter radar.

Gee, hams operate non-type accepted unlicensed tranmsitters every day.

The Zappers are more fun too. The funniest thing I ever saw was a yuppie scumbag in a BMW spill a can of Budweiser onto his shirt as he passed me doing about 100 when I Zapped him as he took a sip.

Are you *sure* Motorola makes the HTX-212? I'll bet $1 that
Maxon makes the HTX-212, just like *Maxon* makes the HTX-202.

Don't be fooled by the presence of the MC3371 and MC145170 chips
in the HTX-202; though these parts are made by Motorola, the radio is
made by Maxon.

Greetings:

I am interested in experimenting in the 10 GHz area, but do not have the resources to purchase decent equipment. I read in this month's QST magazine about people using transverters and modifying radar detectors and other things to work on in this range. Can anyone reference me to any information? Thanks.

I just took the Extra exam on March 19 and I had the same problem (severe writer's cramp by the end of the exam). I practiced using script rather than block letters and that helped a lot on the writing speed.

Fortunately, it's a multiple choice exam and if you're confident that you won't have to resort to the "one minute of perfect copy", then you can abbreviate common words ("t" for "the", "a" for "and", "r" for "rig", etc.) which will help the situation. Also, knowing the basic content of the text you're copying (it's a simulated QSO), the words used are seldom complex, unless you get a bizarre name for a QTH or handle. So you can just write down the key points. For example, if you copy in your head "I am located in Silver Springs, Maryland", just jot down "Silver Springs, MD" verbatim. That way, you will be able to pick it out of a list of four on the answer sheet.

I would recommend these techniques for someone who gets writer's cramp (like me) because I found that the farther I got through the exam, the more my hand shook. Not because I was nervous (you get less nervous as you get into it), but because my hand hurt like hell. My handwriting was nearly illegible at the end.

But it turned out OK and I received my license in the mail 15 days after I took the exam.

Good luck to you,

Jim Johnson WA6SII

Source record: 248353

Once again, thanks to all that sent me suggestions!!!

The final chapter went as follows:
I received several note from folks suggesting I ground the tailpipe and decided to give this a try. During my lunch hour, I dug through my "junk" box at work and came up with some ground braid and a few big hose clamps (amazing what you find in the junk box of a mainframe service rep!!). Armed with these, I went to work on my tailpipe out in the parking lot. The security guard stopped, looked at what I was doing and was about to ask something, but then he said "never mind" and drove off. He knows I'm a Ham! Anyway, I finished my work, and started up the engine. Well, maybe it was a little better, but not much. Just to be sure, I opened the back window so I could hear the radio and then I went back and removed the braid from the tailpipe. Yeah, maybe a tiny bit better. I sat down on the bumper to think about it and as I did the noise dropped several db! The braid, still in my hand, was touching the rear bumper! I loosened one of the bolts on the rear bumper and wrapped the braid around it and then tightened it back up. Sure enough, this dropped the noise on 40M about 6 S units, although other bands were still pretty noisy. Now, this did confuse me a bit since the rear bumper is bolted to the chassis with 6 BIG bolts! You would think at least one of them would provide some grounding. Still not satisfied with the noise on the other bands, I continued researching. The answer came from Charlie King downunder (although he was answering someone else's query). I guess folks downunder understand these 4WD and HF problems. He suggested that 4WD vehicles mount the body to the chassis on rubber cushion blocks, thereby leaving the chassis electrically isolated from the body. Sure enough, the S10 body is mounted on rubber.
My ground braid was bonding the chassis, not just the bumper! Last night I installed large ground braids between the chassis and the body at the 4 body mounting points. The noise is now down to about S1-3 and the noise blanker easily takes it out completely. Not only that, but 20M was open last night when I finished, and I spent several hours out in the car working DX!!!

Regards, DE N6ECN, mobile.

Yes, just voice, it seems a sensible compromise, it doesn't ban
what glen does,
let him send them digitally. I think the real point is missed. The real
point is whether your going to stand up to incredible bullying. There
comes a time when turning the other cheek is unacceptable. Now mind you
I am not a member of DonDon's lil group. But I will tell you that Glen
personally threatened me with arrest and told me to change the disaster
plan for the State within two hours or face his arrest affidavit. On the
night last summer when flash flooding was immenent through about half our
state, the Georgia Emergency Management Agency requested our assistance,
I phoned Glen and asked him if we could have a clear frequency. We have
spent years training our folks that 3975 is the place to go for an
emergency net. This was not a discussion of whether we could change
in the future, this was here and now. He agreed to leave his 8:00 P.M.
broadcast off the air and informed me that the 10:00 would be back on
the air and we had until then to change our emergency plan or I would
face an arrest warrant. I am simply not going to be bullied in this way.

The matter was resolved about 11:00 P.M. when the FCC declared a
communications emergency and ordered Baxter off the air. He complied.
Since the termination of the emergency Baxter has waged war by increasing
his schedule, sending out hundreds and hundreds of "FELONY AFFIDAVIT
REPORT FORMS" I got calls from hundreds of people. I offered (and the

offer still stands) that I will represent, free of charge, anyone charged with a crime, in the state of Georgia, resulting from Glen's affidavits.

I am not going to be bullied in this way, nor will I allow my volunteers to be bullied in this manner!

Now I agree that first on frequency is entitled to a clear frequency for that qso and if glen or anyone else is there first at any given time then he's the one to have the frequency, subject to shifting propogation etc. Emergency communication always take priority.

I think that there is legitimate room for discussion without "land grants" being or amutations being involved.
I think declaring war on the air is, also, the wrong way to do it. FCC enforcement appears unavailable/nonexistant, therefore a regulatory change seems the only possible solution. I don't to create a situation for W5YI to make money from it, nor do I want to affect digital bulletins, which seem to exist without generating wars. But voice bulletins, below 30 Mhz have gone beyond rational control and need adjustment. None of the positive benefits of the digital bulletins would be affected. Nor would the shuttle transmissions. (Sorry Gary, but I just can't see a solution other than fine surgery on the regulations)

The Yaesu FT-530 allows you to plug in a 12v supply and trickle
charge your battery while operating. I personally am looking for
a simple way to defeat this operation so I can leave the battery
pack on. I want to run off 12v, then without taking the unit
out of my carry case, pull the plug and operate off the nicads.

If anyone knows the operation of this trickle charger, and the 3rd
battery terminal (can I just block this terminal to defeat the
charger?) I'd love to know it.

It seems you missed the gentleman's point...

I don't what the type acceptance requirements are for X, K, or Ka radar units. But I don't operate "unlicensed transmitters everyday". I have a license. As for type acceptance, it doesn't apply to operations IAW part 97 - us "licensed operators" are required to keep our "licensed stations" operating with certain technical standards.

I wonder if any other HT brands have the same limitation?

Do any HT's allow one connection that will operate the radio and
charge the battery from the 12v power cord. I am aware that this can
be done from a desk charger and to some degree from a trickle charger.
I am after full power operation and simultaneous charging (trickle charging
is OK). A common cell-phone can do it but my Alinco DJ-160s can not.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 18/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 18 APRIL AND FORECAST FOR 19 APRIL - 21 APRIL

1A. SOLAR SUMMARY
Activity: NA

Flares: NA

Observed 10.7 cm flux/Equivalent Sunspot Number : NA

GOES satellite data for 17 Apr
Daily Proton Fluence >1 MeV: 9.3E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 2.1E+08 (moderate)
X-ray background: A9.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
19 Apr 20 Apr 21 Apr
Activity Low Low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 19 Apr: 85/27

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 17 Apr
Learmonth 9 3223 2222
Fredericksburg NA NA
Planetary NA NA

Observed Kp for 17 Apr: 2112 1112
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
19 Apr 5 Quiet
20 Apr 5 Quiet
21 Apr 10 Quiet
COMMENT: Active conditions expected for interval 22-23 April, due to
coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
18 Apr normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
19 Apr normal normal normal
20 Apr normal normal normal
21 Apr normal normal fair
COMMENT: Degraded HF comms are probable for mid-high latitude circuits
during interval 22-23 April.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
18 Apr 38 slightly above predicted monthly values

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
19 Apr 35 About 10% above predicted monthly values
20 Apr 35 About 10% above predicted monthly values
21 Apr 35 About 10% above predicted monthly values
COMMENT: MUFs at Townsville and Hobart were near predicted monthly
values. Mild Spread F observed during local night hours at Hobart.
Degraded HF conditions expected during interval April 22-23.

>I'd like to get a BP8 for my HTX-202 but Tucker's wants about $90.
>Is there a good source for these batteries or a generic type?

The last time I needed an Icom BP-8, I bought the same size Jabro
clone instead from Amateur Electronics Supply, Milwaukee,
WI. (tel. (800)558-0411).

Jabro, located close by in Illinois, set a high price when
I told them it was for personal use. Guess they didn't
want to undercut their distributors. That's why I bought from AES.

The Jabro battery is model J/CM-8F and rated at 8.4V @ 850 mAH.
I use it perhaps once per week and it has been working reliably
for a couple of years. I use the Icom BC-35 to recharge it.

> emergency net.

Don't you have plans for a secondary frequency should you be unable to use
3975? ...But this is beside the point...

> This was not a discussion of whether we could change
> in the future, this was here and now. He agreed to leave his 8:00 P.M.
> broadcast off the air and informed me that the 10:00 would be back on

> face an arrest warrant.

I hope that I'm not being overly naive, but an arrest warrant for what?
And enforceable by whom?

> Since the termination of the emergency Baxter has waged war by increasing
> his schedule, sending out hundreds and hundreds of "FELONY AFFIDAVIT
> REPORT FORMS" I got calls from hundreds of people. I offered (and the
> offer still stands) that I will represent, free of charge, anyone charged
> with a crime, in the state of Georgia, resulting from Glen's affidavits.

This is all mighty fine of you and I applaud you for such a generous offer.
What is the basis for these felony affidavit forms? Exactly what is
Glen's basis for these? I just don't get it. Wouldn't the FCC be the
authority involved if Glen is claiming interference?

Ken

1221. RE: HTX-202 Blues

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-18 00:00:00 UTC
From: richard@j51.com
Message-ID: <3n0p6c$frd@tzlink.j51.com>
Source record: 248363

Hello,

I have had all of the same problems that you all are having with the service. I have had my HTX-202 In the repair shop almost 10 times in a year an half! For the same two problems! Finnaly I have just given up on it and went out and got me a NEW Radio! I would NOT recommend an HTX-202 to anyone because of the problems I have had! I think it was a poor design and have been VERY upset with the product since day one.

73, Jon N2XFZ

1224. 2M/440 HT's

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-18 00:00:00 UTC
From: clint.bradford@woodybbs.com
Message-ID: <93.30567.7585.0NFB9F64@woodybbs.com>
Source record: 248366

Subject: 2M/440 HT's

>>How about the HTX-202???

On sale this month for less that 190.00.

The HTX-202 has 12 independently-programmable memory channels, plus one calling and three priority channels. It comes with continuous tone squelch encode -AND- decode. Power output is 5 watts minimum (7w typical) with 12 VDC supply, 3 watts @ 9 VDC or 2 watts @ 7.5 VDC. Low power setting provides 1 watt output. A power saver circuit with programmable 1/2, 1/4, 1/8, or 1/16-second duty cycle. Batteries are compatible with larger ICOM (IC-2AT/IC-32AT) series HTs.

Repeater offset can be adjusted from 0 to 4 MHz in steps as set by the scan frequency step selection (5, 10, 20, 25, 50 or 100 KHz). Memories store any offset, and any combination of continuous tone frequencies.

Supplied with Nicad battery, charger, 6-cell alkaline battery case, antenna, wrist strap and belt clip. Features include:

* True FM modulation (not phase modulation) for outstanding transmit audio and best performance in packet service.
* Continuous tone squelch transmit and receive tones are independently programmable.
* In addition to DTMF dialing, there is 5-digit DTMF selective paging (DTMF squelch).
* A five-number memory dialer that stores 15-digit sequences for autopatch use or DTMF paging.
* Scan for either active -- or vacant -- channels, with programmable scanning step of 5, 10, 20, 25, 50 or 100 KHz, and upper and lower scan limits (for VFO scan.)
* FAST, 25 channels/second scanning.
* Selectable priority channel scan interval, every 4, 8, 12 or 16 seconds.
* Multi-function scanning lets you scan standard memories, priority freq. memories, or a frequency range. Resume can be after 10 seconds, when carrier drops, or remain on channel (don't resume.)
* Transmit timeout - if you frequently time-out your local repeater, this circuit will stop transmitting after a preset delay (30, 60 or 120 sec.) and sound a beep. In effect, it forces you to reset the repeater before the repeater times out. Of course you can disable the timeout circuit.
* The HTX-202 carries a 1-year parts and labor warranty.

Subjectively, this HT has exceptionally strong, un-distorted receive audio you'll really appreciate when walking around the local (noisy) hamfest. You won't believe the sound is coming from an HT! Transmit audio is crisp, clear and strong.

From an Owner: "I put a 5/8-wave mag mount on my car, and used the 202 in the very intermod-rich downtown Ft. Worth, TX area. I've never been able to use an HT on an outside antenna within 2 miles of downtown Ft. Worth before. This one performed magnificently. My ICOM 2400 dual-band mobile gets less intermod than any other radio I've used in this environment, and the HT stayed with it, toe-to-toe. When the ICOM heard intermod, the 202 heard it, but when the ICOM was quiet, SO WAS THE HT!"

Even more impressive, the HTX-202 heard signals through the intermod, when the IC-2400 could not pull 'em out! Reason is probably because the HTX-202 is purposely limited in coverage to ham band ONLY! It can't be modified for out-of-band receive. The design objective was to build a specialized ham radio product that does the best possible job on the ham bands, and that includes the tightest, most intermod-free front end RS could design into an HT! The published spec says intermod attenuation is 60db minimum. Spurious response and adjacent channel rejection are also 60db.

The HTX-202 is based on the ICOM 02AT with certain design modifications based on Tandy's specs. These variations include the encode/decode, additional memories, and a full width LCD display. Contrary to rumor, no part of the radio is Kenwood or Yaesu! ICOM sold the rights to their design to Tandy to do with what they would.

Whan Tandy sought to produce the unit, they went to MAXON, a Korean entity. MAXON built the HTX-202 for Tandy, under license from Icom. The HTX-202 is sturdy and well constructed.

MISCELLANEOUS NOTES: Some HTX-202s will not take a BP-7 Icom pack. The BP-8 usually works well.

ALWAYS: Slide off your NiCad pack when using external DC power from your vehicle or a power supply! Leaving the pack on while mobile puts too much burden on the Zener diodes, and generates heat at twice the normal rate. Save your radio and take off the pack!

Unlike it's Icom brother, the 202 will not top charge an Icom pack while on external DC power. Refer to the warning above!

WARNING: DO NOT ATTEMPT TO BOTTOM-CHARGE THE STOCK NICAD PACK IN AN ICOM BC-35 OR CLONE CHARGER.

---

1225. New Web & ftp addresses for Kentrol -- new version too!!

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-18 00:00:00 UTC
From: Brian Gilhuly VE3BGB <brian@kentrol.synapse.net>
Message-ID: <3mv09r$q4n@sentinel.synapse.net>
Source record: 248367
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.shortwave

Kentrol's net addresses -- for the Web page and the ftp archive --
have changed. Now to reach the leading edge in rig control software
with these URLs:

World Wide Web http://www.synapse.net/~kentrol/

From there you can read the documentation and preview the interfaces
of Kentrol and SkedMan, as well as download the latest shareware
versions from the archive at ftp://ftp.synapse.net/private/k/kentrol.
Even if you don't have Web access, you can obtain both programs
by anonymous ftp from:

ftp.synapse.net/private/k/kentrol

New enhanced version 5.1 is now available via either route!!

Kentrol is a Windows 3x control program for Kenwood HF transceivers
and the R-5000 receiver, which has built-in logging and memory
management capabilities. Since its introduction in 1991, Kentrol has
set the standard for Windows-based rig automation and new features
continue to be added regularly. SkedMan is an automated sked manager
for Kentrol. Enter schedule data, set alarms and when an alarm goes
off, SkedMan uses - even launches - Kentrol to tune it in.

Kentrol and SkedMan are shareware, so if you haven't tried them you
are most welcome to do so.

Kentrol is also available from major radio-related ftp archives
worldwide and on CompuServe, and there are linkds to the Kentrol Web
page from all the best ham & swl pages.

Try it; you'll like it!

1226. callsign server rewrite

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-18 00:00:00 UTC
From: devon@olsen.ch
Message-ID: <D78Knu.FG6@olsen.ch>
Source record: 248368

Well, I've been talking about it for years. Those of you that have talked with me via e-mail know that. But this time I've actually started on my rewrite of the callsign server in Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to database from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Look for the new server in two or three months. Until then you can access the current one with:

telnet callsign.cs.buffalo.edu 2000

Enjoy...

This message was originally addressed to ALL
and a blind carbon copy was sent to you.
---------------------------------------
I am looking to buy the Icom Ic-2000H or Kenwood Tm-241A 2 meter mobile
radios. What are your suggestions? I never owned a 2 meter mobile rig
but right now both of these are relatively reasonably priced. Please
help me make the right choice. Any and all help is appreciated.
Thanks.

To all radio amateurs

SB QST ARL ARLB040
ARLB040 FCC data on Internet

FCC data on Internet

The Federal Communications Commission is now offering the complete
amateur service database on the Internet, via the FCC's file
transfer protocol (ftp) site.

This new service marks the beginning of electronic granting of
licenses at the FCC's Wireless Telecommunications Bureau. As soon
as the data for a new license appears in the database, the license
is effective and all privileges of that license may be exercised by
the licensee.

Licensees will no longer need to wait to receive a license document
in the mail; they may use the database as proof of licensing and go
on the air immediately.

The database will be updated every Monday by noon (Eastern Time).

Information may be retrieved using the following procedure:

Access: anonymous ftp.fcc.gov
Directory: pub/XFS AlphaTest/amateur
Documentation: readme.txt

The FCC's Consumer Staff in Gettysburg, Pennsylvania, can answer
questions at 800-322-1117 or 717-337-1212.

Well, yes and no. This is about HALF true. K1MAN has used the same
frequencies for years, but he has GREATLY EXPANDED his hours of operation
in the last year. He used to be on only for 3 or 4 hours a day, and is
now on over 70 hours a week. And yes he does come up on top of nets.

1232. Callsign Server based on FCC Database -- Reprise

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-19 00:00:00 UTC
From: jsbour@ualr.edu
Message-ID: <1995Apr19.231142@ualr.edu>
Source record: 248130

The callsign server software at CALLSIGN.UALR.EDU, port 2000 has undergone furious modification (primarily in the form of bug fixes) the last few days; those of you who have tried it and had problems (immediate disconnects or aborts during certain search types) may wish to try again now. The reports from those of you indicating problems have been MOST welcome; I would encourage any of you still encountering problems or wishing to suggest changes to contact us; your comments will be gratefully received.

We now have the Club/RACES/Military database and the Alien database loaded; clubs are now properly displayed (we hope). We hope to get the alien info presented in the output soon (next day or so).

Coming soon is a WWW interface; watch this space!

>

You are correct Gary, I believe the Radio Shack salespeople make minimum wages.

There is a problem with thinking that a minimum wage RS employee should not know anything about electronics.

I believe the Radio Shack sales person gets paid a minimum wage or a commission of his sales, whichever is the greater amount. It would certainly benefit the Radio Shack salesperson to know a little bit about electronics so they could make a commission and not stay at minimum wage scale. If the person chooses to be lazy and not learn about the items that he/she is selling, then they deserve minimum wages, or less.

Secondly, I believe that the Radio Shack store manager gets paid basically minimum wages, plus a percentage of the store profits. At least that is what I have been told in the past. It that is the case, then it would certainly benefit the manager to know something about electronics and the items that is being sold in his/her store.

That being the case, I would think it would benefit the store manager to know what is in the Radio Shack catalog. If I were a manager, I would insure that each employee under me read through the catalog and knew what was in it, and basically what those items did and how they were used.

However, they don't seem to know what they are selling at Radio Shack. I remember recently waiting in line to pay for a small item while the manager was busy telling a customer that they did not sell a small tape recorder that

was voice acuated. After the customer left, and while I was paying for my item, I politely said, "excuse me, but I thought that you had a voice actuated recorder. I thought that was what this VOX Operated meant on this recorder". I pointed to a recorder that had "VOX Operated" written on it. The manager said "no, that means something else". I just let it go at that, I refuse to argue with them. The problem is that everyone lost. The company lost a sale, and profit. The manager lost a percentage of the profit. The customer lost, because he had to go to some other store to find the item that was sitting right under his nose at Radio Shack.

I firmly believe that each Radio Shack employee should be required to memorize the catalog as a condition of employment.

Joe,

There are two things you can do: send a QSL card via the buro, which will
be most likely OK, since most DL's are in the buro,

or ask here for his adress from the international call book, and QSL
him directly, but remember to include 2 US$ or 2 IRC's.

1245. Cottage for rent in S.W. Ireland with antennas

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-19 00:00:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2F94F2A3@smtp>
Source record: 248241

There are still some weeks left for the cottage.
If you are interested in renting and seeing wonderful Irish sites, read below. If you are not, sorry about the bandwidth.

Thanks,
Peter, KC1QF/EI4GV
kc1qf@amsat.org

==========

I have a rather remote cottage in the extreme south west of Ireland. It is situated about 5 miles east of Cape Mizen Head, and about 2 miles west of the village of Goleen, County Cork, Ireland.

I have a rhombic installed that is oriented North-west/south east and a monobander 20 meter, 3 element beam, pointing South. The cottage has electric shower, electric oven, microwave oven, satellite TV (includes NBC, EuroNews, Worldnet/Deutschewelle, MTV, Eurosport and others), and two bedrooms upstairs with 2 double beds (with douvet covers) and two bunk beds. It also includes storage heating. There is a phone and the neighbors take care of the house (they live about 1.5 miles away). Sheets are changed by the neighbors and the house is cleaned by them as well (a very nice Irish family).

The house has 230V electricity, however in the shack area of the kitchen there is a 1600W 110V transformer.

For visitors there are many sites to see, dolmens, copper mines (iron age), castles, walks, fresh fish and nice shops in the nearby villages (Goleen, Crookhaven and Schull). In Schull there is also the only planetarium in Ireland and an absolutely wonderful bakery/cafe, Adelle's.

For hams, there is excellent facilities, plus Marconi house (in Crookhaven - Marconi did tests here), Marconi transmitter site (on top of nearby Brow head) and nearby Mount Gabriel which has the last European radar station for transatlantic flights (it is controlled from Maastrucht, in Holland). It also retrasmits VHF air comms for Shannon, London, Brest, Scotland etc and has absolutely marvelous views (it's about 1500 feet up). About 3 hours by car you can go to Valentia Island (with a narrow bridge) where there is the Search and Rescue station covering the atlantic as well as the place where the first submarine cable between St Johns, NF and Europe was laid.

This can be the base for a wonderful holiday. Eat fresh fish. Local lamb. Even pluck a chicken. Or hunt a rabbit (millions of them; hunting rabbits and foxes allowed year-round). Or taste the beer from one of the 6 bars (pubs) in the nearby village (has about 100 residents - mind you, one of the pubs sells shoes, the other is also the local gas station, the third is the

butcher and the fourth is the general store/post office).

The cottage rents for $300/week. You need to bring radio and antenna tuner as well as Power Supply(if it's not main powered). And clothes. And I suppose some money. You can fly into Shannon and drive (about 4 hours - drive on the left) or into Cork (2 hours drive).

It is available from the spring of next year(95). Most flights from the US permit stopovers in Shannon, so make a stop and have some fun this part of the pond.

==========
Some weeks are still available during this summer.
==========

Photos in GIF format can be sent via e-mail.

I missed the original posting, but...

I can print comfortably to about 15 WPM, but even then I tend to use a script "e" because it's so much easier to form. Above about 15 I switch entirely to script characters (most of which are single-stroke), and that serves well to about 25 WPM. Over that I don't bother to write down the entire text, but just jot notes on the content. Once I tried to learn to copy by keyboard, but that turned out to be abortive...maybe I'll try again someday.

rec.radio.amateur.misc:

: Most 202's will not take a BP-7 Icom pack. The BP-8 usually works well.
: If the Zener diode in the bottom-feed circuit is bad, only a 9.6-vdc pack
: or less will work. A minor headache at the very least.

: ALWAYS: Slide off your NiCad pack when using external DC power from
: your vehicle or a power supply! Leaving the pack on while mobile puts too
: much burden on the Zener diodes, and generates heat at twice the normal
: rate. Save your radio... Take off the pack!
...
: DESIGN FLAW: Some early production (S/N 2500 and down) radios had the
: NiCad Zener Diode located too close to the finals, causing final transistor
: failure when used on external DC with the pack in place. This was remedied
: in production, and Tandy will remedy under warranty.

Can somebody tell me exactly which diodes are being referred to here?
There are two 1N5819s (D4 and D5) which are used to ensure that if an
external supply and the battery are both connected only the one with
the higher voltage will supply current and there will be no reverse
current flow. These are not Zeners, they are Schottky barrier diodes,
and given their 40 V max reverse voltage and 1 ma. max reverse current
(at temperature 258 C!) I can't imagine any circumstance in which
they would generate heat.

There are two other diodes I can't find specs on, D901 (a KDS193) in
the battery pack charge regulator circuitry, and another unidentified
diode in the battery pack. From the circuit diagram both of these seem
to be ordinary diodes whose function is to prevent reverse current
flow from the battery into the built in or an external charge
regulator, and I can't see any reasonable circumstances where either
would generate heat.

I don't see any Zener diodes anywhere in the circuit.

I don't believe it is possible to *transmit* on AM with the FT-530. I may be wrong...

However, if you are able to modify your 530 to transmit, you will still run into problems legally since it won't be type accepted for that frequency. Someone else may want to say more on this, but it is my understanding that radios used in most services other than ham radio must be type accepted. If you did transmit on a non-type acctepted radio (and the FCC decided to come after you), you could be in some big trouble.

>to be bullied in this manner!

That's fine. File a suit. There are laws against harrassment and making
terroristic threats. There's no need to involve the FCC in dealing with
a bully *mailing* you threats. The FCC doesn't get involved with the
US Mail.

>Now I agree that first on frequency is entitled to a clear frequency

>adjustment. None of the positive benefits of the digital bulletins
>would be affected. Nor would the shuttle transmissions. (Sorry
>Gary, but I just can't see a solution other than fine surgery on
>the regulations)

This is where you miss the boat completely. The problem *is* a lack of enforcement by the FCC. Adding another rule *that they won't enforce* isn't going to solve the problem. The problem is an old fashioned feud over who's going to dominate 3975 kHz. If bulletin stations are banned, that won't stop K1MAN from continuing the war. He'll just recruit a stooge to make it a two way QSO. Then he'll play his tapes for the listening enjoyment of the stooge. That will remain legal, and will still make the 3975'ers jam in return. The only real solution is enforcement of 97.101(d) on *all* parties involved. I'd suggest imposing quiet hours on all the children who have shown they can't act like adults and turn the dial when they get annoyed.

I don't disagree, but the reality is that at minimum wage RS isn't going to get many employees who will. Especially not when a person can make more money at McDonalds, and not have to know how to read or count change at all, just punch the pictures of the hamburgers and let the register make change.

The only way RS is going to solve this problem is to pay a decent wage to their employees, and they clearly don't intend to do that. Therefore, I don't expect any help from the RS counterpersons. I just pick up the catalog, familiarize *myself* with the inventory, and buy what I need. All I expect out of the droids is that they be able to type the catalog numbers into the computer and count the change accurately. (I still do a count myself as a double check.)

Radio Shack markets some decent equipment at decent (sale) prices. I buy from them, but I don't expect help from their retail sales force. At least most RS employees aren't as snotty as Graybar employees. Now *that's* a company I try to avoid if at all possible. (Anyone who serviced early Zenith color TVs knows what I'm talking about.)

Need some help/advice. When I lived in germany before, from 1981-87,
the DBP sent me a bill every time it was time to
pay them for another year .

This time my license is going to expire on 30 April and I haven't yet received a bill from them. Do they still do this? If so, is mine l;ate?

If not, could someone give me the account number to pay to and the addresw for the right part of Oberpostdirektion Nuernburg?

Thanks,

Bill N5LMX/DA1WG

Ps sorry for the poor editing above

DM>Subject: Testing place in Chicago area
DM>Date: Sun, 16 Apr 1995 19:18:06 GMT

DM> Can anyone tell me where I could take the test for my advance
DM>test in the Chicago area.
DM>Thanks,
DM>David Barley

David -
Here's my list of Chicago VE testing:

First Thursday of the month -
In the Midway airport area
Contact Dennis, N9OZR at (312) 838-8088

First Friday, even numbered months -
DuPage Amateur Radio Society
Holy Trinity Church School, corner of Cass & Richmond, Westmont.
(708) 964-6258

First Saturday of each month -
At 9:00 AM
Schaumburg Amateur Radio Club
Hoffman Estates High School, 1100 W. Higgins Rd (HWY 72).
Call NO9A at (708) 593-8658, or
Call K9MFY, Tom, at (708) 894-0174

Second Wednesday of each month -
Edgebrook Field House, 5900 N. Central, 7 - 8 PM
Call WA9EVF, Mike, at (312) 465-0981

Second Saturday of each month -
Arlington Heights, At the Red Cross (??)
Call WA9DLI, Frank, at (708) 437-1464

Second Saturday of the month -
At 9:00 AM
Hamfesters Radio Club
Oak Forest High School, 151st and Central Ave.
Call Al at (708) 535-298(??) (sorry!)

Third Tuesday of the month -
6 - 9 PM
Argonne Amateur Radio Club
9400 S. Garfield, Burr Ridge.
Call Deny at (708) 986-0061

Third Tuesday of the month -
7:30 PM
Fox River Radio League
900 N. Lake Street, Aurora
Call Ron at (708) 892-1252

Third Friday of the month -
6:00 PM, walk-ins accepted until 7:00 PM
York Radio Club
Elmhurst College, Science BLDG., RM. 001
Call Ray at (708) 678-0580, or
Call Jack at (708) 279-6448

(WHEW!)
You might be interested in knowing that the WAFAR club has this information (in case you ever lose this message) on the air every Tuesday night, 8:00 PM, on its 2-meter repeater (146.67Mhz). Negative 600 hz offset, 107.2 PL. We read the info that is closest to the week we are on. WAFAR has 2-meter, 440, and 220 Mhz repeaters, and is one of only 2 EXTREMELY wide coverage repeaters in Chicagoland.

I think the Radar Zappers are exempt from type acceptance because they use low power. Under a certain power, type acceptance is not needed. I think there a neat little toy, but I know I would be very angry if I was riding down the turnpike at my normal speed of about 70-75 and someone played that joke on me. Just make sure you don't expose yourself when using this thing because there are some really nasty people on the road today and they probibly wouldn't just give you the dirty look I would and ask how you did that. They may even get physcial.
73's and PLEASE be carefull

A pilot's first priority safety. If you can chat for a few minutes
between touch and goes, I suppose that's fine. I got 100 mile range with
two watts and a rubber duckie from the left chair in our stinson, but alas,
there were two of us.
Just be careful.

1264. HELP. HAM antenna on sailboat

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-19 00:00:00 UTC
From: bv602@FreeNet.Carleton.CA
Message-ID: <D7AF40.13r@freenet.carleton.ca>
Source record: 248260

It's getting close to launch time and I have to send my backstay off to have the isolators installed. I am VERY new at HAM technology. (Do not yet have radio or license) So, the help of a knowledgable HAM would be very much appreciated.

I will be purchasing at Yeasu 900AT for offshore communications from my 33' sailboat (after I get my license). The range I would like to have is basically North America from the Caribbean. The total length of the backstay is about 45'. The isolators themselves take up about 12" and as I understand holding the bare wire antenna while tranmitting is NOT recommended, I would need to locate the lower isolator about 8' above deck. So that leaves about 35' (let's say 30' to be safe) of 9/32" stainless steel wire to "play" with. So, my question is: How long should the length of the wire (antenna) between the isolators be?

Please Email any suggestions. Thanks in advance.

: jack. In my manual, it says "The attached battery pack is not charged"
: when running external power. My friends manual does not say that, but
: has a lengthy caution about how the pack IS charged and to be careful
: about overcharging the pack or using alkaline batteries when using
: external power. Sure enough, my radio does not seem to charge the pack
: while he regularly charges his pack right through the top connector. I
: on the other hand must use the AD-25 adapter and remove the pack to
: charge it.

: I'm just curious if other owners of the W21AT have similar experiences?

: Thanks,

: Joseph Barone
: N1UCO

From what I've seen, ICOM has two versiond of the rig. The earlier
version which I own does NOT charge the battery through the top DC power
jack. A friend of mine got a newer rig and sure enough - it charges the
battery from the top jack and the AD-25 adapter is no longer included
with the rig. I think it's a marketing afterthought by Icom - they make
a minor modification to the rig, remove the AD-25 from the package and
make it a $$$ after-market option.

>>>>snip<<<<<

Sorry, Gary, you were just the last of a long thread . . .

I'm kind of tired of all this drivel about the poor service support at Radio Shack. WHAT DO YOU EXPECT??? If you want a cheap price you can not expect high priced labor. They do not mix. The same people who are willing to call up a mail order house for Ham goods and receive Sight Unseen a mega buck radio, complain because the high school senior behind the counter at RS doesn't know the difference between a CB and a HTX-202. Or can't find the DSP/HTX-212, VHF SWR meter (discontinued BTW).

I for one never expect them to know anything (and I am rarely disappointed) and I go in and tell them what I want AND where to find it. Can't you guys give it a rest? You're all big boys, you can read and write and you know more of what you want than they do. If you don't know what you want when you go in, don't go to RS! Go to someone who is willing to take more of your money to provide you service, because that is why RS is cheaper than the other guys. Yes, there are exceptions in this life, but not too many. YOU DO GET WHAT YOU PAY FOR. At RS you do not pay for service and you do not get it.

While I'm on my soap box, have any of the complainers out there (and you obviously spend more time at RS than you're willing to admit because you have too many stories to tell) taken the time to help out those guys behind the counter when you hear them misstating, misinforming, our lying through their teeth? Often, the mistakes are legitimate in that they do not know or were misinformed. Don't really expect Tandy to train these guys because they know most will be gone in 2-3 years and it's not worth their time nor money. I don't blame them. But Hams should be Elmers, even if it's to teach a counter hand what's right. You're not helping RS you're helping society. I think it's down right selfish to know the facts about an issue and not make corrections when they come to your attention.

Give it a rest and give 'em some help. They may not want it nor appreciate it but at least you lived up to what the spirit of being of ham is all about.

I step down and lend my platform to someone hopefully more eloquent than I (yes, for the English majors it should be "me" but the "I" is for euphony).

Tony, KN4TX

>
>I dunno...maybe we could talk them into it!

RS already does carry some accessories. They have coax, various RF
connectors, SWR/wattmeters, license study guides, code tapes, and
now 2m and 70cm handhelds and a 2m mobile. They also have a 2m
mobile mag mount antenna. I'm sure more will come.

The company is entering the 'name brand' arena. You may have already seen
some of the test cases (Bell radar detector, Kodak camera ...) that they've
tried in the recent past. I don't know if they will ever put up a magazine
rack, but it won't be for quite a while.

>>- Why don't they have at least one ham employed at every store so that
>> they can help you with a radio you have purchased or even tell you what
>> a ham radio is???
>
>Another good idea! But it depends on how many hams are willing to work
>for Radio Shack!?!

Some stores do. In the past, I've worked part time for them.

I currently work weekends at my local store. Over the last two and
a half years we've had four other hams at that store. At one time
there were three on staff, myself and two others.

We had two hams in our store (myself and NS6K). Biggest problem
there is that Tandy's pay plan stinks. On one hand, they want
(or say they want) knowledgeable people but on the other hand
they don't want to pay an appropriate rate. You basically work
for slightly over minimum wage,

I'm in a fairly busy store and average about $8 or $9 per hour. Not
very much, but well over the minimum wage level.

and now Ft Worth has instituted
a "revised" compensation plan that effectively gives the part
timers a 20% to 30% *pay cut*. Any knowledgeable ham can make
far more money elsewhere. When RS seriously wants hams on thiker
staff, and is willing to pay a liveable wage, they'll get 'em!

This policy goes into effect the beginning of next year. I plan
to tender my resignation just after the Christmas season. I've
written to the vice president of personnel explaining my position.
I was pleased that he took the time to respond to my letter. I'm
sure he has bigger things to deal with. His response said in essence
~~we'll be getting you more customers by selling name brands at a
smaller margin~~I hope you reconsider your plan but our plan stays~~

Oh well...

1272. SR3 Ring Mate Decoder. Where can I buy?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-19 00:00:00 UTC
From: shustak@parkcomm.iii.net
Message-ID: <3n45ut$m43@news.iii.net>
Source record: 248268

Hello Inc, a catalog of telephone accessories, lists a product called an SR3 Multiline Ring Mate decoder. This box decodes the multiple ring patterns generated by the telco's Ring Mate System. This system allows a person to have three different telephone numbers tied into the same line. This allows you to hear a different ring for each number. The box decodes the rings, and sends the signal to the appropriate jack on the back of the box. In this way, you can feed data, fax and voice to different devices.

I like the box, but this company seems pricey. Has anyone seen this product anywhere else? Supposidly, the box can decode the ring signal in less than 1/2 seconds (I don't know how it can without hearing the whole ring pattern) and is better than the standard ring decoders.

Has anyone tried out one of these boxes? Trying to receive faxes and voice on the same line is a pain - I pick up the phone and it's the fax. By the time I get to the fax machine, the call hangs up. A friend calls, the fax picks up and he hangs up.

Thanks.

Chris

And since you're not interfering by jamming a legitimate transmitter and only sending out a signal that receivers are obviously intended to receive, no problem!

I love it!

Just a small request: Could someone e-mail me a FAX number, e-mail address, or an 800 number (if one is available) for the R.L. Drake company in Ohio? I have a Drake SA 24 stereo processor (used with an older technology TVRO system) and am trying to figure out how to reprogram the "programmable" settings.

Thanks in advance,

Jack

1277. ZL9GD no good?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-19 00:00:00 UTC
From: tigger@prairienet.org
Message-ID: <3n356f$s45@vixen.cso.uiuc.edu>
Source record: 248273

Greetings-

I was one of the 1000 or so folks that had a QSO with ZL9GD back in February of this year. I was very happy, as I needed that for a New One.

I was dismayed to see a note from K8JJC that said the operation took place from a boat off shore, NOT on ZL9 land. Therefore, according to a phone call K8JJC made to the DXCC folks at HQ, this will not count.

Does anybody have any info on this? I was unaware he was on a boat, or I wouldn't have bothered calling him. I imagine that the VK's and US guys that ran lists for him wouldn't have bothered either, had they known.

Some clarity would be appreciated; a New One hangs in the balance.

73 & DX,

Sean

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 19/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 19 APRIL AND FORECAST FOR 20 APRIL - 22 APRIL

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 92/37

GOES satellite data for 18 Apr
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
20 Apr 21 Apr 22 Apr
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 20 Apr: 88/32

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 18 Apr
Learmonth 6 2321 1122
Fredericksburg 8 6
Planetary 8 6

Observed Kp for 18 Apr: NA
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
20 Apr 10 Quiet to unsettled
21 Apr 10 Quiet to unsettled
22 Apr 25 Active to minor storm
COMMENT: IPS Geomagnetic Warning 11 was issued on 19 April and is
current for interval 22-25 April.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
19 Apr normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
20 Apr normal normal normal
21 Apr normal normal normal
22 Apr normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
19 Apr 45 about 15 to 30% above predicted monthly values

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
20 Apr 35 About 15% above predicted monthly values
21 Apr 35 About 15% above predicted monthly values
22 Apr 35 About 15% above predicted monthly values
COMMENT: IPS HF Communications Warning 16 was issued on 19 April and
is current for interval 22-26 April. MUFs at Townsville and Hobart
were near predicted monthly values. Spread F observed during local
night at Hobart. Degraded HF conditions expected during interval
April 22-23.

More comments for WRC-95

The ARRL has filed reply comments to the FCC on preparations for the International Telecommunication Union's World Radio Conference (WRC-95) scheduled for later this year (in IC Docket 94-31).

Responding to a suggestion by Leo One USA (LOU) that the region 216 to 220 MHz might be allocated in the future for Mobile Satellite Service uplinks, the League said that that spectrum already is heavily used in ITU Regions 1 and 3 for a number of services.

The ARRL also noted that just last month the FCC issued a Report and Order (in ET Docket 93-40) allocating 219 to 220 MHz to amateurs, on a secondary basis, for point-to-point fixed digital message forwarding systems.

Regarding future WRCs, the League said since the conferences now are predictably scheduled, the FCC should adopt a ''permanent and forward looking preparatory process, with timetables sufficiently long for public comment to be thoughtful and comprehensive.''

The League recommended ''a more formal WRC industry advisory committee process.''

1285. ICOM W21AT Battery Charging..

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-19 00:00:00 UTC
From: Jabarone@cris.com
Message-ID: <3n2l3t$lie@warp.cris.com>
Source record: 248375

Hello All,

I was wondering if anyone out there who owns an ICOM W21AT HT would be able to address this question. I have a W21AT that I mainly run off of external power. My friend has the exact same radio. What is curious is that his owners manual and mine seem to be different and the two radios seem to operate differently. If you look in page 2 of the manual, the diagram showing the top side of the radio indicates the external DC power jack. In my manual, it says "The attached battery pack is not charged" when running external power. My friends manual does not say that, but has a lengthy caution about how the pack IS charged and to be careful about overcharging the pack or using alkaline batteries when using external power. Sure enough, my radio does not seem to charge the pack while he regularly charges his pack right through the top connector. I on the other hand must use the AD-25 adapter and remove the pack to charge it.

I'm just curious if other owners of the W21AT have similar experiences?

Thanks,

Joseph Barone

>This is all mighty fine of you and I applaud you for such a generous offer.
>What is the basis for these felony affidavit forms? Exactly what is
>Glen's basis for these? I just don't get it. Wouldn't the FCC be the
>authority involved if Glen is claiming interference?
Yes, It is the position of the FCC and DOJ that communications related crimes are not pursued without consultation with and approval of the FCC. I am not worried in the slightest about any actual prosecution proceeding beyond an initial stage. What I am more worried is some cowboy asst. u.s. atty. getting an indictment, or making an accusation that requires the time and travel to get it thrown out.

A few years ago the Congress amended the Communications Act to include criminal penalties for intentional interference. Its a rather vaugue and simplistic section. Sorry I don't have my U.S.Code disk at home and can't cut it out for you. Its really there....

You will likely fry the radio or the batteries. You need something
like a 7805 regulator set to 10.8V (look up a few regulator circuits -
the Rat Shack book might even tell you). I think they can handle 1w
(4V x250Ma is OK, you might want to put on a small finned heat sink
to stop it getting hot to the touch).

>described above? OR should I just use the 14.8 V car battery just for
>recharging the 450mAH HT battery at lets say 45 mA current using the

Charging NiCads is a bit of a trick. You can't leave them at
high voltage or they will dry out. QST had almost a battery charger of
the month for most of last year. Otherwise buy thebattery charger for
the HT.

Good morning. It's Sunday the 23rd of April and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

And we start this week with news that there is a new RSGB QSL Bureau sub-manager for the G4P series of callsigns. He is Mr M Humphrey, G0SWY, whose address is correct in the current RSGB Call Book.

There will be a lecture on the life and work of Sir Edward Appleton at the Institution of Electrical Engineers on Wednesday the 26th of April. Tea will be at 5.00 pm and the lecture will be at 5.30 pm. The venue is the IEE at Savoy Place, London WC2. Non-members of the Institution are welcome to attend, and there is no charge.

The Morse Enthusiasts Group Scotland is organising an informal get-together near Dunfermline to celebrate the birthday of Samuel Morse on Thursday the 27th of April. All amateurs are welcome for refreshments and a go on the key. For further details, please contact Jack Nicholson, GM0MFE, on 01382 858700.

GB25RR will be operating on Saturday the 29th of April from the British Motor Industry Heritage Trust museum at Gaydon in Warwickshire, as part of the celebrations for the 25th anniversary of the Range Rover.

The British Red Cross will be running a special event station to mark its 125th anniversary over the weekend of the 14th to 16th of July, and Anita Segar, G0SXO, asks anyone else who is planning to organise a Red Cross 125th anniversary station to please contact her as soon as possible. G0SXO's address is correct in the current RSGB Call Book.

Now a note for your diary:

The York Cluster Support Group DX Convention will take place on Saturday the 13th of May at the Post House Hotel, Tadcaster Road, York. Speakers at the convention will include Alan Jubb, G3PMR; Roger Western, G3SXW; Ron Stone, GW3YDX; and Bob Harrison, G4UJS. For other members of the family, York Minster, the Jorvik {pronounced "Your-vick"} Viking Centre and the Railway Museum are a short distance away. For further information, contact Colin Thomas, G3PSM, 36 Chelwood Crescent, Leeds LS8 2AQ.

A vacancy exists as RSGB Liaison Officer for Hampshire. Candidates wishing to apply for the post should write to the Council member for Zone D, Julian Gannaway, G3YGF, giving details of their experience and qualifications. G3YGF's address is correct in the current RSGB Call Book.

A TS-50S HF transceiver and an FT-480R VHF transceiver were stolen from the car of Ray Oliver, G3NDS, while in Torquay over the Easter holiday period. Any information should be sent to G3NDS, at the address in the current Call Book, or to Torquay police on 01803 841301.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Green Turtle Cay {pronounced "key"} in the Bahamas, C6AGN is active as from now until Monday the 24th of April on all bands, SSB and RTTY.

From the Solomon Islands, H44/JA1OEM will be active as from Tuesday the 25th of April until the 20th of May on 10 to 160 metres, on SSB and slow CW.

And from Morocco, John, I5JHW will sign CN2GB from Friday the 28th of April until the 10th of May.

Next the Rally News:

The Bury Radio Society rally is taking place today at the Castle Leisure Centre, Bolton Street, Bury. The doors open at 11.00 am, with priority admission for disabled visitors. Talk-in is on 2 metres channel S22.

The Lough Erne Amateur Radio Club mobile rally is also taking place today at Killyhevlin Hotel, Enniskillen. The rally features the usual traders and there is a bring and buy stand.

And also today, Sunday the 23rd, the Swansea amateur radio and computer show is taking place at the Swansea Leisure Centre on the A4067 Swansea to Mumbles road. The event features a bring and buy stall, special interest groups, and the usual traders.

The Norfolk Amateur Radio Club is holding a surplus equipment sale today at the Norman Centre, Bignold Road, Norwich. There will also be a bring and buy stand. The doors open at 11.00 am, and the auction starts at 2.00 pm this afternoon.

Next weekend, the 29th and 30th of April, there will be an amateur radio and computer rally at the Adam Bede Trade and Exhibition Centre, Derby Road, Wirksworth, near Matlock. For details call John McLaughlin on 01629 825607.

On Sunday the 30th of April the British Amateur TV Club will hold a rally at the Sports Connexion, Coventry. The rally will feature many radio trade stands, special interest groups and a bring and buy stand. Doors open at 10.00 am, or 9.30 am for disabled visitors, and talk-in will be on 2 metres channel S22 and on the GB3CV repeater. More information from Mike, G6IQM, on 01788 890365.

Also next Sunday, the 30th, the East Cleveland Amateur Radio Club annual rally will take place at the Leisure Centre at Marske-by-the-Sea. The event will feature the usual traders and a bring and buy stall. Doors open at 11.00 am. For further information call Malcolm, G4YMB, on 01287 638119.

And the Anglo-Scottish Rally will take place at Tait Hall, Kelso, on Sunday the 30th of April, starting at 11.00 am. Talk-in will be on 2 metres on S22. For further details, call Colin, GM4UFP, on 01750 20006 after 6.00pm.

The Amateur Radio Caravan and Camping Club is holding a rally at Weston, Northamptonshire, on the Bank Holiday weekend of the 6th to 8th of May. A limited number of pitches are available for visitors who would like to combine camping with amateur radio. Details and booking forms are available from the membership secretary, Alan, G4LWA, on 01494 531755. Completed applications must be returned by this Friday, the 28th of April.

And the Dartmoor Radio Rally will take place at the Yelverton Memorial Village Hall, Yelverton, in Devon, on Saturday the 6th of May, starting at 10.30 am. There will be talk-in on 2 metres channel S22 and more information can be obtained from Ron on 01822 852586.

Now for the HF contest news, and we start with a reminder that groups planning to take part in this year's HF National Field Day on the 3rd and 4th of June must register, by sending details of the site to be used, to David Hill, G4IQM, by the 6th of May. The full rules for HF NFD are in the April RadCom.

The Low Power Fixed contest is taking place today between 0700 and 1100 UTC. The rules are also in the April RadCom.

On Friday, the 28th of April, the fourth event of the RSGB Slow CW Cumulative contest will take place. The rules are in February's RadCom.

We know of no VHF or UHF contests either today or next weekend.

And now the solar factual data:

Due to the continuing problems within the Space Environment Laboratory no data as been received from them at all this week. The period from the 10th to the 16th of April saw solar flux levels increase, while the geomagnetic field declined to quiet levels. Solar flux levels increased every day from 74 units on the 10th, to 91 units by the 15th. The average for the period was 84 units. The 90-day solar flux average on the 16th was 85 units, one unit higher than last week. Geomagnetic activity declined from active levels of 23 units on the 10th, to very quiet levels of only 2 units on the 15th and the 16th. The average was 10. The Boulder A index has been quoted since the planetary A index is not available. The aa indices, as supplied by the British Geological Survey for the period from the 4th to the 10th of April, started at very quiet levels with only 5.6 nanoTeslas for the 4th. Levels increased dramatically on the 7th, with a daily figure of 109.9 nanoTeslas. During the evening period 192 nanoTeslas, K6, was recorded. Levels declined but remained at sub storm levels for the rest of the period. The average was 39.6 nanoTeslas: 40 nanoTeslas would have been K4.

I'll repeat the figures: flux-84, A index-10.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 7th to the 13th of April, declined due to the high geomagnetic levels and auroras. Levels were down to only 4.8MHz on the 10th and the average for the period was 5.6MHz. The darkness hour lows also suffered, and were down to 1.7MHz on the 8th, but did show signs of improvement towards the end of the period and averaged 2.3MHz. The daytime highs took place between 10.00 and 19.00 hours, with the darkness hour lows around 04.00 hours, except for the 9th when they were at 23.00.

I'll repeat the figures; highs-5.6MHz, lows-2.3MHz.

And lastly the solar forecast.

This week the more active side of the sun will be rotating away, solar activity is expected to decline to very low levels and solar flux levels are also expected to decline to the high 70s. Geomagnetic activity is expected to be at active to sub storm levels for the first half of this week and then decline to unsettled levels for the remainder of the week. Ionospheric MUFs during daylight hours for the south are expected to improve later in the week and may be up to 21MHz, with the darkness hour lows being around 10MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Yankee and G7 Uniform Quebec series, and Novice calls in the 2 0 Alfa Kilo and 2 1 Delta Whisky series.

--

GB2RS is prepared by the Radio Society of Great Britain

TS>I'm kind of tired of all this drivel about the poor service support at
TS> Radio Shack...

TS>I for one never expect them to know anything (and I am rarely disappointed)
TS>and I go in and tell them what I want AND where to find it.

No need to lecture them. I think they understand the economics
involved. I was VERY grateful to be able to buy a 6-pin DIN plug and
mic cable for my Kenwood HF xcvr today at Raio Shark, but what amused
me was the new BAGs they gove you your merchandise in now. They have
question marks all over them. Kind of reminds me of the puzzled look
on the employees' faces most of the time if you ask them a question!
Heck I was in a local town today (smallish town) called from the
only hospital in town to the only shopping mall in town (they happened
to be about 5 blocks apart) and the guy at R.S. could not give me
directions. He put me on hold to go ask another sales rep, and left me
there 5-6 minutes holding. I gave up and asked someone else. I could
have almost WALKED there it was s o close. I guess he was new on the
job... but I thought about this thread when I saw that hilarious
looking new bag -

"YOU'VE GOT QUESTIONS... WE'VE GOT PUZZLED LOOKS!!"

1297. Ignition noise, S10 Blazer, Solved!

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-20 00:00:00 UTC
From: wcoyle@dccc.edu
Message-ID: <23798FBJCPGDMSUQCMP@dccc.edu>
Source record: 248139

Ahhh, you think your ignition noise is a problem, sit back, crack open a cold one and enjoy my story. Still yet unresloved..

I purchased a '94 s-10 pickup in January and had every intention of installing a 2 meter mobile in my beautifull new truck. 2 meter fm being what it is, I expect little problem with noise, and having installed countless mobile accesories from Ham rigs to 8' bass tubes in previous vehicles I thought NO PROBLEM. Man, was I wrong.

At first I was in luck, I found a really good place to mount my new tranciever under the dash...Nice spot I thought to myself, and I've got plenty of wire to run through the firewall to the battery. Only one problem with doing this, short of drilling a hole there is NO place to run wires through the firewall. OK, I thought to myself, the rig only pulls 10 amps max on transmit and the fuse block has a 20 amp tap point, I'll hook it up there (I think this may be the source of the next problem). Now I get RF on 147.795 repeater input for the local machine and I get it at s-9! Since the RF was only there with the key on, I started pulling fuses to find the problem. Fuse out+RF gone=source, right? Guess what, it's the ANTI LOCK BRAKES!!! And it's not a constant problem. It happens every now and then. So, my question is, what can I do to eliminate my noise, and what exactly is causeing it. If anyone can help me with this problem, I would appreciate it.
Tnx & 73
Bill

usually no problem using a "mill" - but: talk to the VE Team beforehand so they'll be expecting you and you can find out if the room is "typewriter friendly". the normal rooms we have to use have those deskchair things that make typing rough. we also use headphones so it's less of an issue but in the past, we'd have to run the mill guys later so the "by ear" guys could try the test w/o having to listen to the minor QRM from the typewriter.

HEAR AND MEET K1MAN AT DAYTON

HEAR K1MAN AT DAYTON

Glenn Baxter, K1MAN, will be circulating widely at the 1995 Dayton Hamvention to get interviews for the IARN Information Bulletin Service. He will be a speaker, along with Hap Holly, KC9RP; Bill Pasternak, WA6ITF; and Vern Jackson, WA0RCR at the 9:30 AM Sunday forum titled "Information Bulletin Services." Come to the forum and meet these people in person! Glenn will be monitoring 147.29 simplex during the Hamvention.

You are cordially invited to listen to our live "call in" amateur radio talk program every Sunday night at 8 through 8:45 PM Eastern. We take telephone calls live at 207 495 2215. You can also FAX questions or comments to 207 495 2069 or use Packet Radio: K1MAN@K1RQG.ME.USA.NA

This information bulletin talk program is simulcast live on 3.975 and 14.275 MHz. and is re- transmitted during the week by alternating with our regular bulletins. During the evening program between 8 and 11 P.M. the bulletins and talk program are each transmitted twice for a continuous 3 hour program for your information and amateur radio enjoyment.

You are also invited to listen to the IARN Amateur Information Bulletin Service daily on 14.275 MHz. and 3.975 MHz. at 1000, 1100, 1300, 1700, 2100, and a special three hour program starting at 0000 UTC. That is 6 AM, 7 AM, 9 AM, 1 PM, 5 PM, 8 to 11 PM Eastern. Also hi fidelity AM transmissions every Sunday at 6 PM Eastern on 3.890 MHz. and 7 PM. Eastern on 7.290 MHz.

For more info send an SASE to IARN, Belgrade Lakes, Maine 04918. If you would like to be a special guest on the talk program, call 207 495 2215, and we will make the appropriate arrangements.

Clean the base of the magnets *often*. They attract gritty
iron particles. More than you would imagine. This scuffs
the paintwork on the car roof. Thats why many hams have
cars with rusty roofs ;-)))

If anyone is interested, I've got a set of C programs (think C for the Mac,
but only using ANSI features) for stripping down the database, removing some
crud, generating an index file, and searching the database by callsign.

Drop me a note if you're interested. You'll need about 200mb of free disk
space to work with the FCC files!

From: Gerald Schmitt <ggs@aerie.lanl.gov>
Message-ID: <3n5vkv$po6@newshost.lanl.gov>
Source record: 248148

Tony,
A lot of the responses stem from the unfounded almost religious Rat Shack worship. Rat Shack has a new mediocre piece of equipment out oh ecstasy. Then the wishful rumor mongering. Some twit opens one up and sees Motorola on a device instantly it is made secretly by Morotola.

Here on the net a lot of sales driods seem to dwell passing on more of this tripe. If some one even hints he wants a 2 meter radio this one clown fires off his sales brochure file for the rest of us to see for the umpteenth time.

I had the nerve to post a "heads up" about a problem with the "six months same as cash" offer that I had taken advantage of. A Rat Shack store manager took it upon himself the get into my credit card account records and publish financial details on the net. The fact that a store manager can access your credit card account should give you some food for thought.

Just a few observations watch me get flamed to complete your education

1307. Re: Iambic vs. Bencher key? -- Newbie

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-20 00:00:00 UTC
From: fedpress@omnifest.uwm.edu
Message-ID: <3n62mt$prp@omnifest.uwm.edu>
Source record: 248149

Shade,

"Bencher" is a brnad name; the name of a manufacturer of several models and varieties of telegraph keys. "Iambic" means a key that has two independently-moveable paddles.

I believe the info you really are after is, should you get a key with two paddles (Iambic) or just one (non-Iambic). The answer to that is, if you haven't already learned to use a single-paddle key to send CW, it's very probably best to learn on an Iambic paddle.

I, in contrast, for learned (back in the early 70s) to send CW first on a straight key, then on a "bug" (a semi-automatic mechanical key). Thus, although I have an Iambic paddle (Jone Keyer brand), I operate it as if it were a single paddle. That probably doesn't mean much to you. The thing to keep in mind is to go straight to an Iambic paddle if you haven't already learned to use another kind of paddle or keyer.

Also, you might want to check out the article on CW paddles that appeared in 73 magazine in December of I believe 1992. It contains a number of useful tips, like not buying any paddle until you've had a chance to personally test its feel. (Preferences in these sorts of things are intensely personal-- what might be perfect for you might be 'way to light for me, etc.)

Finally, there's a book you might consider buying: "The Code Book: Amateur Radio CW Operating" by Robert Halprin, K1XA. It's published by Tiare Publications in Lake Geneva, WI and is available for around $18 from Tucker Electronics and other ham radio booksellers.

Good luck,

Rick WB9GYT

1309. Why no voice below 7.15?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-20 00:00:00 UTC
From: ac3l@ix.netcom.com
Message-ID: <3n645f$eb8@ixnews3.ix.netcom.com>
Source record: 248151

Does anyone know the reason that hams in the USA (most anyway) are not allowed below 7.15 for voice? Is there a particular reason for the rule? It seems to me that regardless of the future changes to 40 meters, it would have been better to have ssb below 7.15 and cw above 7.15. With the available filters for cw, the broadcast would be no problem for cw operation.

->
-> Clint (clint.bradford@woodybbs.com),
-> you always put up long messages on the advantages of Radio Shack HTX
-> Are you one of the owners of Radio Shack?
-> Peter, KC1QF

Face it, the radios that Radio Shack sells for the amateur bands aren't THAT bad. I've known several people who owned them... some loved them, some hated them. It's the same with Yaesu, Kenwood, Icom, Alinco etc. Myself, I prefer the Yaesu radios but there are those out there who'll tell me that they're junk. Fine... I'll state that all Kenwood radios are junk.

If a ham wants to get on the air, what difference does it make which radio he/she buys? So long as it meets with the applicable standards and sounds good I could care less.

The other nice thing about Radio Shack is that the stores are all over creation... so if your radio goes sour just bring it back. No need to box it up and ship it to HRO, AES, etc. Granted, the shack hasn't done well with most hams because of their dwindling parts section but that's what the market dictates. Get with it people, there are only 600,000 hams in the US and 1.8 million others.. guess whose preferences for electronics win out?

Tony

Seems as though the _old_ 610 form, that had a spot on it that you had to sign before a notary, had something going for it. The affidavit you swore to said something to the effect that you had _no right_ to any particular frequency, by virtue of prior use or any other reason.

I don't recall when they dropped this--think it was sometime in the '60s, but it sure would cut the legs off anybody trying to press criminal charges against somebody using "his" frequency.

1316. RFD: rec.radio.amateur.low-profile

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-20 00:00:00 UTC
From: adam@libertynet.org
Message-ID: <3n6bvc$mc9@rodan.UU.NET>
Source record: 248158
Cross-posted to: news.announce.newgroups,news.groups,rec.radio.amateur.antenna,rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.space,rec.radio.amateur.policy

REQUEST FOR DISCUSSION (RFD)
unmoderated group rec.radio.amateur.low-profile

Group Name: rec.radio.amateur.low-profile
Proponent: Adam O'Donnell <adam@libertynet.org>
Distribution: worldwide
Newsgroups file: Operation of low-profile amateur radio stations.

This is a formal Request For Discussion on the creation of an unmoderated Usenet newsgroup, rec.radio.amateur.low-profile.

This RFD has been posted in accordance with the Guidelines for Newsgroup Creation. Its language is based on previously submitted RFDs.

****

NOTE: This is not a Call for Votes (CFV). Do not try to vote now.

This message begins a discussion period considering the creation of a rec.radio.amateur.low-profile newsgroup. Discussion should take place in news.groups. All follow-up posts should be made to news.groups.

Any comments such as "I vote yes for rec.radio.amateur.low-profile" will be treated only as a positive reaction to the proposed charter and not as a yes vote on the creation of the group. The CFV will contain instructions on how to vote.

****

CHARTER:

Rec.Radio.Amateur.Low-Profile is a newsgroup devoted to those amateurs who, for various reasons, must configure their radio stations to operate from restrictive areas such as condos, apartments, townhouses, neighborhoods with outdoor antenna restrictions, ships/boats, mobile homes,
or wherever they fry their burgers and call home.

The objective of this newsgroup is to encourage us to investigate means of employing all of the modes available to us for as many different purposes as possible. For examples, how can we use: FM (frequency modulation), CW (morse code),
SSB (Single Side Band: Voice on the Short Wave bands) on: LongWave, ShortWave, VHF (Very High Frequency), UHF (Ultra High Frequency), MicroWave, and Satellite.

Operators who use the newsgroup will be encouraged to describe in
detail their home station and how they solved the never-ending problem of
small city lots and housing development "no-antenna" contracts.

Rec.Radio.Amateur.Low-Profile will be an unmoderated newsgroup.
Users of the group are already experienced netiquette because of their
experience in Amateur Radio, which is a sort of Ladies/Gentleman's club.

A Rec.Radio.Amateur.Low-Profile FAQ will be posted a few weeks after the
creation of the newsgroup.

REASONING:

There are many newsgroups and mailing lists that exist on the
Internet for amateur radio antennas, low power operation, satellite
communications, etc. where operators in restrictive conditions post
continually post messages for help with their situation. In more cases
than not, the operator cannot find sufficient help on the 'group or list.

There should be a place where people who have solved their problems
with cramped quarters can post their problems to a group of knowledgable
amateurs.

I have conducted several informal polls and have discovered
that there are many amateurs (and, actually, non-amateurs) who would
very much favor and enjoy the creation of a newsgroup of this sort.

Distribution of RFD:

The complete official messages - RFD, CFV and vote results
will be posted to these required or affected newsgroups:
news.announce.newgroups, news.groups
rec.radio.amateur.antenna, rec.radio.amateur.misc,
rec.radio.amateur.homebrew, rec.radio.amateur.equiptment,
rec.radio.amateur.space, rec.radio.amateur.policy

Procedure for creating this newsgroup:

Interested parties are encouraged to comment on this proposal in
news.groups. Please post your comments *only* in news.groups.

After 21 days, if there appears to be a strong consensus in favor of
this proposal as it is written here, a CFV will be posted, which
will initiate the voting process; otherwise, discussion will
continue until a more refined proposal can be prepared.

After the CFV is posted, the voting period will be at least 21 days.
If the group passes by receiving 100 more YES votes than NO votes,
and (at least) two-thirds of the total vote is affirmative, the
newsgroup
rec.radio.amateur.low-profile will be created.

Again, please do *not* vote now. The voting process has not begun,
and your votes will be DISCARDED if you attempt to do so.

For more information on the newsgroup creation process, see the documents entitled "How to Create a New Usenet Newsgroup" and "Usenet Newsgroup Creation Companion", posted regularly to news.groups, news.announce.newusers, and news.answers, and available for ftp at rtfm.mit.edu in /pub/usenet/news.groups.

I am entirely new to the world of ham radio, but would like to learn more. I've found quite a bit of info in FAQs and other internet sources, but I haven't yet located a DOS program that will help one learn Morse code. Do such programs exist? I've been able to locate several programs that will convert text to code, or code to text... but none that seem designed to help one learn code. I'm not a programmer, but it would seem that such a program is feasible.

Thanks in advance.

Source record: 248165

The problem seems to be more wide-spread than I thought so 'will post the e-mail file I sent to Fairweather:
The cure for me was shunting C-24 (10 uf@16v) in the DISPLAY UNIT. Since it is a filter-capacitor on the -5v power line, I shunted it with a 39uf tantalum-type. Note that it is not neccesary to disconnect the old one since it simply "opened up". Be sure to put positive-to-ground. My memory is dim, but I seem to recall that I had to reach into a tight place and add a small extension to accommodate the replacement (space-wise).
In general, the circuit is this: The source for the -5v power is a secondary winding on T-1...a high-freq multivibrator transformer. Then half-wave rectifier D-21, first filter (C-23, 10uf-16v), then series R-43 (39 ohm), and second filter C-24 (the culprit),shunted by -5v zener (D-22) to ground. The -5v is also routed thru L-1 and out J-2. J-2 also brings in +13.8 volts to L-2 and on to IC-3 (+5v regulator). The +13.8 also supplies the mulit-vibrator mentioned above.
I didn't experience this, but I seem to have a note that someone suggested that the ground-pin on J-2 might be suspect.
'Hope this helps...I'm still using my ICOM-751....it's one of the earliest ones out. I bought it "used".

>helped me a lot in copying voice traffic.
>>

I agree. Here are some things which have helped me in copying CW
at 20+ by hand:

a) Write in longhand rather than trying to print.

b) Write in all lower-case letters.

c) Use a ballpoint or "Uni-ball" type pen, *not* a pencil. The
pen moves easier on the paper than a pencil, doesn't have a point
to break, and doesn't wear down. These types of pens usually
degrade gracefully (i.e., they fade slowly rather than dying all
at once).

d) Copy on smooth paper; I prefer yellow legal pads (for the line
spacing) or quadrille pads; notebook paper is OK but the line
spacing is pretty wide.

e) Put only 5 to 7 words per line.

Using the above, I am approaching "solid copy" at 25 WPM; however, I
doubt that I'll be able to write fast enough to keep up at 30 and 35 is
absolutely out of the question; I'll need to learn to touch-type.

If you're an older person with slower reflexes, or suffer from some
physical malady which limits your ability to write quickly in longhand, then even 20 WPM
may not be achievable by hand copy. Barring these limitations,
however, you should be able to do 20 if you remember than penmanship will
have to be sacrificed; it only has to be *readable*, not look pretty, and
except for a "copy one minute solid" test the only one who has to be able to
read it is you; you can always transcribe the copy to "dress it up."

>

I think I am beginning to see why MAN started all of this, not condoning his actions, but I have multiple times asked if freq is in use, no answer, call CQ, no answer, Call CQ again, told there is a net on this frequency, no ident of course, then I monitor for a while, some time the nets starts in 10 or 20 minutes, sometimes over an hour. I can make lots of QSO's in this amount of time.

I am sure that MAN didn't just wake up and say I'm going to start broadcasting on 3.975. I suspect he was provoked, even more sure of it now after reading this stream, and found a LEGAL way to deal with it.

ARLD019 Size rule for DXCC

ZCZC AE94
QST de W1AW
DX Bulletin 19 ARLD019
From ARRL Headquarters
Newington CT April 20, 1995
To all radio amateurs

SB DX ARL ARLD019
ARLD019 Size rule for DXCC

Minimum-Size Rule Adopted for DXCC

The ARRL Awards Committee voted 5 to 2 to accept a modified ARRL DX Advisory Committee (DXAC) recommendation to add a minimum-size rule to Point 2 (Separation by water) of the Countries List Criteria in the DXCC rules.

This change adds the following paragraphs to the existing rules under Point 2:

''(c) An island is defined as a naturally formed area of land surrounded by water, the surface of which is above water at high tide. Rocks which cannot sustain human habitation shall not be considered for DXCC country status.

(d) An island must meet or exceed size standards. To be eligible for consideration, the island must be visible, and named, on a chart with a scale of not less than 1:1,000,000. Charts used must be from recognized national mapping agencies. The island must consist of a single unbroken piece of land not less than 10,000 square feet in area, which is above water at high tide. The area requirements shall be demonstrated by the chart.''

ZCZC AE95
QST de W1AW
DX Bulletin 20 ARLD020
From ARRL Headquarters
Newington CT April 20, 1995
To all radio amateurs

SB DX ARL ARLD020
ARLD020 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, Mike, OM2DX, the 160 DX Bulletin, Salim, A41JV, ROARS, Edwin, K8VIR, Joe, NJ1Q, Jim, AD1C, Dave, TI5RLI, Tom, AL7EL, and the Contest Corral column from the pages of QST magazine. Thanks to all.

VIETNAM. XV7SW has been busy with his work, but will soon be spending more time on the bands. New low band antennas have been installed.

WAKE ISLAND. Tom, AL7EL, will activate Wake Island May 10 through 17. Plans are to operate 80 through 6 meters, with an emphasis on the lower bands and 50 MHz. QSL via AL7EL CBA or the KL7 bureau.

SAINT PIERRE AND MIQUELON. Bruno, F5JYD, and Eric, F5SSM, will both sign TO7I April 27 to May 6. Activity will be on all bands with SSB and RTTY. They will try to operate from other different islands. QSL via F5JYD.

KERMADEC ISLAND. Barry, G4MFW, aka ZS1FJ, has obtained operating permission, but will probably be active for only a few hours a day. Listen for G4MFW/ZL8 from May 5 to 15 on 80, 40, 20 and 15 meters.

MADAGASCAR. JE8BKW and JH8CLU will operate as 5R8DL April 28 to May 4.

AZORES. Bill, KQ4GC, will operate from Terceira Island as CU3/KQ4GC until April 23. He will concentrate on SSB on 80 through 10 meters. QSL via Bill Gallier, 4094 Sandy Run Drive, Middleburg, FL 32068.

WESTERN SAMOA. Edwin, K8VIR, is operating as 5W1GEH. QSL via Edwin Hartz, K8VIR, 108 Hartz Drive, Holly, MI 48442.

OMAN. Members of the Royal Omani ARS, ROARS, will operate from Al Ghanam Island as A43GI April 20 to 27. Plans are to be on all bands with SSB, CW and teleprinter modes. This will be a new one for the IOTA award. QSL via A47RS, PO Box 981, Postal code 113, Sultanate of Oman.

LOW BAND DXING. Heard or worked on 160 meters recently include,
4L4KK 1840 kHz at 2107z and 1843 at 2128
4X4NJ 1830/0337
4X6ZK 1842.7/0311
9H1AL 1833.5/2206 and 2222
9H3TY 1827.4/2046 and 1833.6/0322
G4VFU/MM 1843.8/0026
HA8BE 1832.1/2250
I1JBO 1831.9/2242
IT9AUP 1831/0006
IT9ZGY 1833/0311
R1FJL 1831.1/2009 and 1835/2033
S0RASD 1840/0042
S92SS 1835.5/2356
SV1NN 1836/2353
SV8ZS 1834.2/0456
T93M 1830/2109

PIRATES COVE. Jim, AD1C, reports that a pirate has been on the air using the call of Sanyi, XU7VK and XU95HA. Tips include faultless American English, northern accent and a refusal to go to CW.

THIS WEEKEND ON THE RADIO. The YU DX Contest, sponsored by the Yugoslav Amateur Radio Association, Narodna Tehnika Belgrade and Yugoslav DX Club, runs from 1200z April 22 to 1200z April 23 on 160, 80, 40, 20, 15 and 10 meter CW and SSB. Exchange signal report and ITU zone.

The Friendship Contest, sponsored by the Russian Speaking Radio Club International, USA, and KV Journal of Moscow, Russia, an HF magazine, runs from 1300z April 22 to 1300z April 23, on 40 and 20 meter CW and SSB. Stateside stations send signal report and state. CIS/Baltic stations will send signal report and CQ zone.

The Ten-Ten International Net Spring CW QSO Party, sponsored by the Ten-Ten International Net, is from 0000z April 22 to 2400z April 23. Operate CW or RTTY and exchange call, name, state and 10-10 number, if a member. For more information on these three events, check page 124 in March QST magazine.

The SP DX RTTY Contest begins at 1200z April 22 and ends at 2400z April 23. Information is sparse for this event, so monitor activity on the air for operating hints.

Sam,

I have a couple of programs that will run packet from an Amiga. One is specifically for a PK232. The other works with any TNC that uses KISS.

What version of the Amiga OS are you running?

If you are interested I can e-mail the executables to you. Let me know via e-mail.

1331. 737 Versus 737A-Expanded RF ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-20 00:00:00 UTC
From: haworth@Direct.CA
Message-ID: <3n487i$oql@stud.Direct.CA>
Source record: 248173

The 737A only has Diode D303 on its Logic Board
(unlike the older 737 which has diodes D3 (and D4 andD5).

If you cut D303 on the 737A the set will not function..
as I now well know.

Any suggestions on how to accomplish
this mod for the 737A ??

Please email to <haworth@DIRECT.CA>

Many thanks

Message-ID: <3n4al1$2s3@blackbird.afit.af.mil>
Source record: 248174

Anyone have any mods for a Kenwood th-22at ? Nice radio.
I have the info for moving the d208 diode to d212 postion.
To expand transmit.
The only drawback on this little unit I'd like changed is
it needs a backlit key or at least illuminated.

private e-mail please......
parkerbk@msrc.wpafb.af.mil

Thanks

Keith

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 19/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 19 APRIL AND FORECAST FOR 20 APRIL - 22 APRIL

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 92/37

GOES satellite data for 18 Apr
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
20 Apr 21 Apr 22 Apr
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 20 Apr: 88/32

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 18 Apr
Learmonth 6 2321 1122
Fredericksburg 8 6
Planetary 8 6

Observed Kp for 18 Apr: NA
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
20 Apr 10 Quiet to unsettled
21 Apr 10 Quiet to unsettled
22 Apr 25 Active to minor storm
COMMENT: IPS Geomagnetic Warning 11 was issued on 19 April and is
current for interval 22-25 April.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
19 Apr normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
20 Apr normal normal normal
21 Apr normal normal normal
22 Apr normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
19 Apr 45 about 15 to 30% above predicted monthly values

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
20 Apr 35 About 15% above predicted monthly values
21 Apr 35 About 15% above predicted monthly values
22 Apr 35 About 15% above predicted monthly values
COMMENT: IPS HF Communications Warning 16 was issued on 19 April and
is current for interval 22-26 April. MUFs at Townsville and Hobart
were near predicted monthly values. Spread F observed during local
night at Hobart. Degraded HF conditions expected during interval
April 22-23.

1334. Re: Radar Detector Zappers

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-20 00:00:00 UTC
From: shade@primenet.com
Message-ID: <3n4pot$1eq@news.primenet.com>
Source record: 248176

Besides just nasty people, radar signal generators are nasty to begin with.
I recall seeing a 20/20 show in which they interviewed several officers who
developed cancer on various parts on their body where they kept the radar gun.

One guy would put the radar gun between his legs as he was turning around to pull
someone over. He developed testicular cancer. Another one would attached it to
his shoulder somehow so it wouldn't roll around (with velcro, I believe) and he
developed cancer in his shoulder. All of these exposures, however, were over the
period of years on daily use.

: by switching the rig off and on again. I seem to remember reading
: somthing a while back that this was a common problem with ICOM electro-
: luminescent displays and was caused by some electrolytic capacitors
: in the ELD HV inverter drying up. Can anyone confirm if this is the
: case?. And if so what are the circuit designations of the capacitors
: that need replacing?.

: Does ICOM have an E-mail address where I can contact them direct?

: regards

: Alistair (G7GAR) QTHR

: E-MAIL fairweather@taz.dra.hmg.gb

Hi Alisair:

I had that problem too in a 751, I don't have a manual with me now but if
you will just take the display apart and write down the values of the
electrolytics you can probably shotgun the entire display with new
electrolytics for a couple of bucks or should I say a pound or two.

Public educational already has, and it's already here. This doesn't have anything to do with Morse, though.

Morse is one of the few things that has traditionally separated hams from wannabe's, and the same can rightly be said of homebrew and technical expertise.

These traits are hardly grounds for questioning intelligence, however. Anyone who lacks them all just isn't a real ham.

>(trickle charging is OK). A common cell-phone can do it but my Alinco
>DJ-160s can not.

Sure, the Yaesu FT-530 can do this... I would guess it is not the only
one. It allows full power operation from 12V DC while trickle
charging the battery. In fact, since there is no way to turn this
feature off, they even warn you not to leave the pack on there for too
long and provide a plastic cap to cover the bottom of the rig with if
you remove the battery. 'Tis quite good for those long drives to
remote hamfests... makes sure the pack is charged when you get there!
:)

> Jeff NH6IL

Oh, I see Jeff. It's O.K. to make little comments about a guy who was not even advertising an item for sale in this news group but not in 'swap' because you don't think commentary should be allowed. What, did you just want to warn everybody that this guy might rip them off in the future or were you just trying to be funny. Thats really begging the question, don't you think? Why don't you ask him if he's STILL beating his wife while you're at it. And suppose he did post the item in swap just as you insinuate he will, will it be O.K. to make a comment about it then? Which would you say is worse, hypocricism or anarchy, hmmmm?

I'm glad you live in Hawaii and I'm mostly on VHF so I never half to deal with you on the air. And by the way, are you going to write my site's postmaster about this post too? He hasn't had a laughf as good since the last time you did it.

To answer the original poster, I can get an HTX-202 manual from a friend and have the info to you in a day or so.

And Jeffrey, please refrain from polluting the 'net with your useless insults. Nobody is interested.

REQUEST FOR DISCUSSION (RFD)

Group Name: rec.radio.amateur.low-profile
Status: unmoderated
Proponent: Adam O'Donnell <adam@libertynet.org>
Distribution: world-wide
Newsgroups file: Discussion of the operation of a low-profile amateur radio
station.

This is a formal Request For Discussion on the creation of an unmoderated Usenet newsgroup, rec.radio.amateur.low-profile.

This RFD has been posted in accordance with the Guidelines for Newsgroup Creation. Its language is based on previously submitted RFDs.

****

NOTE: This is not a Call for Votes (CFV). Do not try to vote now.

This message begins a discussion period considering the creation of a rec.radio.amateur.low-profile newsgroup. Discussion should take place in news.groups. All follow-up posts should be made to news.groups.

Any comments such as "I vote yes for rec.radio.amateur.low-profile" will be treated only as a positive reaction to the proposed charter and not as a yes vote on the creation of the group. The CFV will contain instructions on how to vote.

****

CHARTER:

Rec.Radio.Amateur.Low-Profile is a newsgroup devoted to those amateurs who, for various reasons, must configure their radio stations to operate from restrictive areas such as condos, apartments, townhouses, neighborhoods with outdoor antenna restrictions, ships/boats, mobile homes,
or wherever they fry their burgers and call home.

The objective of this newsgroup is to encourage us to investigate means of employing all of the modes available to us for as many different purposes as possible. For examples, how can we use: FM (frequency modulation), CW (morse code),
SSB (Single Side Band: Voice on the Short Wave bands) on: LongWave, ShortWave, VHF (Very High Frequency), UHF (Ultra High Frequency), MicroWave, and Satellite.

Operators who use the newsgroup will be encouraged to describe in
detail their home station and how they solved the never-ending problem of
small city lots and housing development "no-antenna" contracts.

Rec.Radio.Amateur.Low-Profile will be an unmoderated newsgroup.
Users of the group are already experienced netiquette because of their
experience in Amateur Radio, which is a sort of Ladies/Gentleman's club.

A Rec.Radio.Amateur.Low-Profile FAQ will be posted a few weeks after the
creation of the newsgroup.

REASONING:

There are many newsgroups and mailing lists that exist on the
Internet for amateur radio antennas, low power operation, satellite
communications, etc. where operators in restrictive conditions post
continually post messages for help with their situation. In more cases
than not, the operator cannot find sufficient help on the 'group or list.

There should be a place where people who have solved their problems
with cramped quarters can post their problems to a group of knowledgable
amateurs.

I have conducted several informal polls and have discovered
that there are many amateurs (and, actually, non-amateurs) who would
very much favor and enjoy the creation of a newsgroup of this sort.

Distribution of RFD:

The complete official messages - RFD, CFV and vote results
will be posted to these required or affected newsgroups:
news.announce.newgroups, news.groups
rec.radio.amateur.antenna, rec.radio.amateur.misc,
rec.radio.amateur.homebrew, rec.radio.amateur.equiptment,
rec.radio.amateur.space, rec.radio.amateur.policy

Procedure for creating this newsgroup:

Interested parties are encouraged to comment on this proposal in
news.groups. Please post your comments *only* in news.groups.

After 21 days, if there appears to be a strong consensus in favor of
this proposal as it is written here, a CFV will be posted, which
will initiate the voting process; otherwise, discussion will
continue until a more refined proposal can be prepared.

After the CFV is posted, the voting period will be at least 21 days.
If the group passes by receiving 100 more YES votes than NO votes,
and (at least) two-thirds of the total vote is affirmative, the
newsgroup
rec.radio.amateur.low-profile will be created.

Again, please do *not* vote now. The voting process has not begun,
and your votes will be DISCARDED if you attempt to do so.

For more information on the newsgroup creation process, see the documents entitled "How to Create a New Usenet Newsgroup" and "Usenet Newsgroup Creation Companion", posted regularly to news.groups, news.announce.newusers, and news.answers, and available for ftp at rtfm.mit.edu in /pub/usenet/news.groups.

72, 73 (best regards)
Adam O'Donnell <adam@libertynet.org>

1347. Conn. QSO Party May 6-7 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-20 00:00:00 UTC
From: kd1yvjim@aol.com
Message-ID: <3n6oon$8go@newsbf02.news.aol.com>

Connecticut QSO Party May 6-7, 1995

The Candlewood Amateur Radio Association, CARA, will sponsor the 1995 Connecticut QSO Party 2000 UTC 06 May through 2000 UCT 07 May, with a rest period from 0400 through 1200 UTC 07 May. Operations will be on 160 thru 2 meters, including 2 meter FM. Stations may be worked once per band per mode.

CARA will operate W1AW, the American Radio Relay League station on Sunday, 07 May, as well as the club station, W1QI throughout the contest.

A plaque and certificates will be awarded. Voice contacts count as 1 point each, CW contacts as 2 points each, and contacts with W1AW or W1QI as 5 points each. Connecticut stations score multipliers of 1 per Connecticut county plus one per other state or DX station. Stations in other states count one multiplier per Connecticut county (8 total.)

Another message will follow with details of the Worked All Connecticut Counties award. Contacts for both awards are encouraged.

Details will be found in the April and May issues of major ham magazines. Note that in the April 73 Magazine, the column heading stating April dates is in error, although the text is correct.) For a full operating guide package, contact
Frank Etzler, N8WXQ at his callbook address.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 20/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 20 APRIL AND FORECAST FOR 21 APRIL - 23 APRIL

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 86/29

GOES satellite data for 19 Apr
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA (normal)
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
21 Apr 22 Apr 23 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 21 Apr: 85/27

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 19 Apr
Learmonth 9 2222 3322
Fredericksburg 10 9
Planetary 8 6

Observed Kp for 19 Apr: NA
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
21 Apr 12 Quiet to unsettled
22 Apr 25 Unsettled to active, minor storm periods possible
during local night
23 Apr 20 Unsettled to active
COMMENT: IPS Geomagnetic Warning 11 was issued on 19 April and is
current for interval 22-25 April.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
20 Apr normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
21 Apr normal normal normal
22 Apr normal normal normal
23 Apr normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
20 Apr 40 15 to 20% above predicted monthly values

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
21 Apr 35 15 to 20% above predicted monthly values
22 Apr 15 Near predicted monthly values
23 Apr -5 About 15% below predicted monthly values

COMMENT: IPS HF Communications Warning 16 was issued on 19 April and
is current for interval 23-26 April. MUFs at Townsville and Hobart
were near predicted monthly values. Degraded HF conditions expected
during interval April 23-26.

1349. Wear Hawaiian shirts to Dayton!!

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-20 00:00:00 UTC
From: penneys@brahms.udel.edu
Message-ID: <3n6rko$8ne@brahms.udel.edu>
Source record: 248191

A while ago, a Philadelphia radio station promoted "Gonzo Hawaiian Friday," which invited anyone who could get away with it to wear a Hawaiian shirt to work. This was an earlier precursor to "casual" days, I guess, but it was a lot of fun.

I brought this dubious custom to Ham Radio Outlet in Delaware, where at least one other brave soul has helped carry the torch. It's especially powerful when we wear the same shirt, by chance.

We would like to carry this to Dayton and see an ocean of plaid broken by palm trees, orchids, and parrots. Please join the effort and maybe it won't rain. Yeah, right....

Tnx and CU..... Bob

The Sugar Creek Amateur Radio Society, Fort Mill, SC, will operate special event station WB4REE from 1400z-2000z Saturday, April 22, to commemorate the 130th anniversary of the final meeting of the Confederate Cabinet at Fort Mill. The station will operate in the general-class portion of 40M and 20M for sure, as much of the general-class portion of 15M and 75M as conditions will permit, and the novice portion of 10M.

We also will have 2M and 440M for close-in contacts.

QSL information (ck. April QST and CQ]:

Dick Sine, KB3WN
100 Poplar St.
Fort Mill, SC 29715

We are offering a certificate on parchment to those who make a contact with us and send a QSL and SASE (9x12 for unfolded, smaller and you take your chances).

73's,

Dick, KB3WN

1351. Manual needed - Heathkit IB-2A Impedeance Bridge

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-20 00:00:00 UTC
From: rongross@netcom.com
Message-ID: <rongrossD7Cy05.n4o@netcom.com>
Source record: 248193

As the title implies, I am looking for the manual for the
Heathkit IB-2A Impedeance Bridge.

Or, if no manual, maybe some operating procedures/hints
or general comments as to whether it can be used reliably
and with good precision as opposed to more modern
(and usually expensive) "DMM" types by fluke and BK etc.

It appears in very good condition, not sure when it was built as
it was bought from an "antique" store specializing in vintage
radios, hi-fi, and electronics.

Thanks for any info or comments one may have.

: KB0PML
: Bryan Parks

Well Brain,

I have gone through three different HTX-202. I bought my fist one in November 1993. All went good until December 1993 when the TUNE/M-CH knob went out on me. I have the 5 year TSP plan on the radio so brought it back and the store manger get me a new one. One month later the same problem happened with the TUNE knob, and this time the the BNC connentor was get loose so they sent it to the shop. when I got it back every was fixed and fine until the next week. The tune knob broke again and this time the batter wouldn't hold a charge. Brought it back again (This is Febuary 1994) sent it back came back and all was fixed. Then within two months every start braking. The store manganer gave me anther new one. which of corse is broken. this time the backup batter was bad. sent it back. So today the radio still has the bad battery RS never got that fixed. And last month at our club meeting ICOM came and I won the door prize a NEW IC-T21a. So my HTX-202 is my electronit junk pile and have not done anything with it since. I afraid if i turn it on i don't know what is going to happen! I have a few hams in my area who have the hxt-202. The one that have a Serial number less then 20000 have not had a problem. one's above that have been in the shop at least one for something. I think the quality control at RS has gone way done. SO buyer be awhere.

IS>I'm in the luck postion of being asked to do research for a friend.

IS>He'd like ANY info you might have on the following :

IS>* Mods for a Ranger RCI 2950
IS>* Linear or Bi-Linear 11m amps
IS>* Supliers for sales & tech info.
IS>* Plans for 11m beam ant. (To build quad or 3 element)
IS>* Plans for ant tuner/matcher
IS>* 11m club/books/mags/meets info (BC, Canada preferred)

IS>Anybody able to offer some insight on any of these?

IS>Thanks,

IS>Simon.

I can offer you some advice on asking Hams about 11 meter amps,
DON'T! Amatuer operatiors aren't about to risk there ham ticket to
supply 11 meter amps. Even though the FCC is lacks on 11 meter
inforcement,it's still illegal and that's enough reason for most to just
stay away from stuff like that.
Tnx & 73

Subject: which callbook server is most up-to-date?

>>the qrz and buffalo servers are pretty much out of date
>>and hence have very limited usefulness :(

I politely beg to differ.

The QRZ! Ham Radio CD-ROM is quite popular on my BBS (it's online). It contains last Summer's surge of new Licensees - and all licensees up to November or December 1994.

For about twenty bucks - it's quite a deal.

Not only does it have powerful DOS and Windows interfaces for its Callsign databases, new search programs for AIX and OS/2, and several hundred files for the amiga and the Macintosh - It also contains a large new collection of amateur related shareware from many sources. QRZ! has been granted special permission from the ARRL to publish their entire INFO SERVER directory, which you'll find in the \arrl directory.

Internationally, they've updated the Canadian callsign database and have added quite a few UK and IT (Italy) callsigns. It is, however, a primarily U.S. callsign database.

>: block letters.
>

That was my initial reaction also. I am currently trying to increase my speed from 13 to 20 and it is going slowly, as did the increase from 5 to 13.

As I get better at it though it seems that the problem isn't the writing (i use lower case script characters), but rather my thought time in comprehending the characters. The more automatic that recognizing the fast Morse characters gets the less problem there seems to be with recording them. I'm not learning to write, just learning to recognize fast code.

What I have totaly failed to do so far is to assemble a word of longer than about 3 letters in my head before I write it down. Maybe that will come with time.

>seek to upgrade my ticket up to general as time permits?
>
>Shade

I'm by far an expert in this area, but I'll offer observations I've made over various keyers/paddles.

It seems there are generally two styles of paddles available. One has a single paddle that moves to the left for dits or right for dahs. The other has two paddles -- one for dits and one for dahs. There is also a single-paddle style that works somewhat like a straight key on its side.

There are also various styles of electronic keyers, or electronic keyers with various modes. The most popular seems to be the fully-automatic iambic style. The others are semi-automatic and manual. Typically iambic keyers offer all three modes.

Fully-Automatic Iambic
The keyer generates properly timed and spaced dits and dahs. Hold down the dah key and the keyer sends a series of dahs. Hold down the dit key and it sends a series of dits. Hold down both keys simultaneously and it sends dit-dah-dit-dah or dah-dit-dah-dit continuously depending on which key was held down first. A popular sub-mode is single-bit memory. This is harder to explain than demonstrate. Basically if you hold down the dit/dah keys then release the dah/dit keys, the keyer sends dit-dah-dit. The way this works is that the keyer remembers if you were holding down a key while the last dit or dah was sent. If you were, it sends the extra dit or dah.

Semi-Automatic Iambic
If I remember correctly, this sends properly timed and spaced dits and dahs but does not automatically repeat. You must press/release each key for each dit/dah sent.

Manual Iambic
This mode works more like a straight key. A continuous tone is sent as long as the dah key is held down.

The Bencher paddle is a good choice and can be purchased in combination with the MFJ iambic keyer for a slightly reduced cost than the two individual units.

I hope this helps somewhat. I know there are other styles of keyers and paddles/bugs available, but the Bencher paddle and iambic keyer seem to be the most popular and ones I am most familiar with. Some HF rigs also have iambic keyers built-in so all you need is a paddle.

Do you mean the topic of "antennas" is too narrow in focus? I would expect such a topic to catch the interest of quite a few amateurs. Seems to be doing that now, methunks.

>mathematics of logarithms which are what all those Db things work on.

Yes, we should, IMO. In fact, we should *definitely* teach EEs how
to use one - not because they'll use it in their work, but because it
(a) demonstrates principles of logarithms, and (b) requires the user to
THINK when doing calculations, because the user has to decide *where to
put the decimal point in the answer*.

I cannot tell you how many times I have watched young engineers use
a calculator to solve a problem and come up with a totally ridiculous
answer, and *NOT KNOWN* that the answer was wrong but just accepted it
at face value. Don't get me wrong, I use a calculator, spreadsheets,
RF design tools, etc., all the time, but the *discipline* of having hd
to do slide rule calculations way back when (write the problem out,
arrange calcultions in scientific notation, etc.) still influences my
thought process and creates a "Does this make sense? Should it be
checked?" mentality instead of a "charge ahead, times a-wasting" one.

And, BTW, the multipage tutorial I wrote and posted some months ago
on dB and dBm was written not only for non-engineers and digital engineers,
but even some EEs around here had "less than firm grasp," shall we say,
of the concepts. In the case of the EEs, all were under 40, and none
had ever used a slide rule (some had never *seen* a slide rule).

Just my opinion.....

I notice you haven't had much response to this... I do not speak from personal experience, so this is only a suggestion. I would suspect that the offending signal is traveling down the 'outside' of the 2m coax. To combat this I would try placing a string of ferrite beads at either/both ends of the cable. A first approximation could be done with torroids large enough to slip over the connectors, but removing the connectors and placing beads that just slip on the cable would be best. While you were doing this work, it might be a good time to make a single shack ground plate for passing all of your antenna cables through grounded connectors. I, of course, haven't done this yet. But I wait with fervid anticipation for the sizzling dance of an errant lightning bolt tracing the paths of my antenna cables from the attic accross my ceiling as it laughs at the poorly grounded 12 gauge wire and dances into my recievers...

Just wanted to let folks know that 10 meters was open late yesterday afternoon (4/20) into the evening from Maine into Georgia, and both Carolinas. Worked about a half dozen stations from about 2200 UTC on with nothing more than 60 watts and an old vertical.

Will be working 28.425 this evening and periodically throughout the weekend. Hope to talk to you on 10 meters.

Just curious if anyone knows where one could find known mods for this scanner.

Specifically, extending the scanning frequencies into the 880-895 Mhz range as these are currently locked out in the US version of this unit (maybe in all versions of it for all I know).

Any help would be appreciated,

Wayne VE3WQS

When I was studying for my General, I used longhand to speed my writing.
That worked fine. When I went for my Extra though I switched back to
block letters, I'm not sure why. I did have problems with E especially
double Es. What saved me was teaching myself to write E as a backward
three. I was then able to keep up. I still write that way whenever
I print, its become that automatic. Good luck and don't give up.

True. It'll depend upon the individual VE group whether you'll be
permitted to use it, though. Telephone in advance and talk to the VE; most
are reasonable, but none of us like surprises. Also note that, if you use
a computer to copy at a VE session in which _I_ participate, I'm gonna keep
a careful eye on you.

Remember that the criterion is the ability to pass a written test after
listening to the test tape. _How_ you do that is, excluding actual
cheating, up to you (but with the concurrence of the VE team).

I agree but with different subjects missing from the 95 handbook.
It appears that the ARRL handbook went the way of Unix -- it became
unbundled. I suspect that your mu-wave projects, etc went into the
UHF & Microwave book that's new for this year. <sigh>

> (I think I wasted $30.....)

If all you wanted were the mu-wave projects then I suspect you did.

> Great Steve, but how about some brief instructions on how to use it?
> Does it have foreign callsigns or only domestic USA?
> Thanks - Brian, AF4K

Instructions? What's that? <GRIN>

Seriously, just telnet to it and type "HELP" at the prompt. As far as what
data is in it: it uses the FCC database that is available via anon FTP,
so I guess that means it has domestic US, Club, and reciprocal alien
license data.

For the command-line-challenged, type:
-------------------------------------------------------------------------
$ telnet callsign.ualr.edu 2000

(blah blah blah)
LOOKUP> HELP
-------------------------------------------------------------------------
A good second command would be CALL your-callsign-here

I must agree that I don't think this topic would generate enough
traffic to justify its space on the net. And I speak as somebody who lives
in a first floor studio apartment and gets out (sorta!) on hf with a
dipole wrapped around my ceiling--9 feet up! Well, the West coast hears me,
generally...
I think threads on this topic can and do get addressed reliably enough
on the various groups, including .misc, .antennas, and .homebrew, or on
the qrp-l mailing list. I just don't see very much posted regularly, even
though it is a relevant issue for many of us.
Speaking of this, does anyone remember the "Condo Communicator" that
used to come out occasionally here? I don't remember who organized it, but it
was pretty informative...
Anyone, my .02 watts worth...

I've worked this guy a few times. Sent IRC's, Greenstamps, French Postage (direct and via France), and never gotten one card from him. I have "heard" of others that received QSL's, but there was no special method used. I won't waste my time with this guy if I ever hear him on the air again. Unfortunately, he is the only FR5 I've ever heard.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 21/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 21 APRIL AND FORECAST FOR 22 APRIL - 24 APRIL

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 85/27

GOES satellite data for 20 Apr
Daily Proton Fluence >1 MeV: 7.5E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 7.5E+07 (normal)
X-ray background: B1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
22 Apr 23 Apr 24 Apr
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 22 Apr: 85/27

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 20 Apr
Learmonth 3 2211 1100
Fredericksburg 3 9
Planetary 5 6

Observed Kp for 20 Apr: NA
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
22 Apr 25 Unsettled to active, minor storm periods possible
during local night
23 Apr 20 Unsettled to active
24 Apr 20 Unsettled
COMMENT: IPS Geomagnetic Warning 11 was issued on 19 April and is
current for interval 22-25 April.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
21 Apr normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
22 Apr normal normal normal
23 Apr normal fair poor
24 Apr normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
21 Apr 32 near to slightly above predicted monthly values.

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
22 Apr 25 Near predicted monthly values
23 Apr 0 About 15% below predicted monthly values
24 Apr 5 About 15% below predicted monthly values
COMMENT: IPS HF Communications Warning 16 was issued on 19 April and
is current for interval 23-26 April. MUFs at Townsville and Hobart
were near predicted monthly values. Degraded HF conditions expected
during interval April 23-26.

ARLB043 Awards Committee Accepts CAC Recommendations

ZCZC AG10
QST de W1AW
ARRL Bulletin 43 ARLB043
From ARRL Headquarters
Newington CT April 21, 1995
To all radio amateurs

SB QST ARL ARLB043
ARLB043 Awards Committee Accepts CAC Recommendations

The ARRL Awards Committee voted unanimously to accept Contest
Advisory Committee (CAC) recommendations to change the DX window in
the ARRL 160-meter contest to 1830 to 1835 kHz and to add a rover
category to the ARRL UHF Contest. The CAC is currently studying
rover scoring for ARRL contests. Nevertheless, neither committee
wanted to delay the implementation of the UHF rover category

By a 6 to 1 vote the Awards Committee accepted a CAC recommendation
to add club competition to the ARRL 10-meter Contest. In a related
matter the Awards Committee unanimously passed a motion to designate
28.3 through 28.35 MHz as a noncontest window during the ARRL
10-meter Contest. (This means that stations should not call ''CQ
contest'' in this window.)

Further information will be included with the appropriate contest
announcements in QST.

R U kidding, Bob? Why Dayton is the only place I feel I can go and dress
like normal people......with my plaid shirt, my old checkered golf pants, my
spiffy white belt, and white shoes (which many times people don't get to see
because it rains so much and I have to put on my overshoes :-( ), and my
3 HT's plus my scanner hanging from my belt, along with my Buck knife and
my truckers wallet chain strap. I'm sure you'll spot me though, Bob, cuz
I got a custom made neon orange hard hat with a platform for 3 rubber duckies
and a stubby discone antenna, too. I keep the antenna switching unit in my
pants pocket, though I did get clobbered up side the head last year by some
XYL who musta though I was doing something strange, what with my hand moving
around in my pocket so much. Never did figger out what she thought I was up
to, though. I'll be looking for ya in yore Hawaiin shirt, but as for me,
I'll be there dressed like a real HAM! 73 "BoB"

Hello & CONGRATS on working up to 20 wpm.

A couple of things, though...
1) You CAN type at your VE session. There is no "paper and pencil"
requuirement. Bring along your laptop and type to a word processor, if
you like. Just let the VE's know what you are doing first - they may need
to confirm that there isn't a cw decoder on the hard drive!

2) If you don't want to lug the keyboard along, try taking notes. Since
you've taken (I assume) a cw test or two by now, you know the drill --
callsigns, names, locations, etc. Take notes from the proceedings and use
them to answer the questions. That was my choice & it worked great
(passed the 20 wpm first try).

3) Jump into a contest and use a paper log. No doubt your writing speed
will pick up. Although it may sound it, this isn't a facetious suggestion.

Good luck on the test - enjoy CW....it's the A-1 mode, you know.
73,

Hi,
I have a repeater site that will only allow me one antenna. I know of the 1.2 GHz duplexers for FM (like from TX/RX) but does anyone know of a 1.2 GHz duplexer for ATV? My freq pair is ~ 30 MHz apart. I assume this helps.
Thanks so much! - Chris N8UDK

I wasn't aware of his BROADCASTS on 20m - until one day he came up on top of
a XW I was trying to work on 14275. I think there were several hundred people
in the pileup, and he just started transmitting.

Why would I (in the UK) be interested in what he had to say on his RECORDED
BROADCAST?

Scott

P.S. I STILL haven't managed to work XW!

>

I don't claim that all of RS's goods are the be all and end all of
consumer electronics but I just don't see where the prejudice comes
from. I see all these guys calling the HTX-212 a piece of junk when in
fact they have never owned one or read a review.
No RS bias here....I would expect the same about a new I/K/Y product
too. Give it a chance, try one out, read a review before passing
judgement.
An obvious reflection of ones ingnorant character.

1401. Re: Radar Detector Zappers

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-21 00:00:00 UTC
From: edwar029@maroon.tc.umn.edu
Message-ID: <edwar029-2104950212030001@dialup-1-36.gw.umn.edu>
Source record: 248204

This article was in Newsline several months ago:

*****
ZAPPER-ZAPPED

The Zapper, a radio transmitter that can be altered to set off automobile radar detectors, has itself been zapped by the FCC. According to the Reuter News Service, Electronic Rainbow Inc. of Indianapolis, which advertised its transmitter as a way to stop speeders, said it has heeded a Federal Communications Commission order to stop selling the $50 unit.
The company claims that device was originally intended for amateur radio operators communicate. But a check by Newsline of recent issues of QST, CQ, 73 and Amateur Radio Trader Magazines show no advertiser listing for either Electronic Rainbow or any microwave communications device by them for hams. And the Reuter story says that with only a few minor adjustments, the unit changes frequency to 10.525 gigahertz, which triggers alarms on radar detectors.
The FCC stopped short of saying that the Zapper is not really a piece of ham gear. It does note that the unit has not received federal approval and would likely be required to have safeguards to prevent its alternative use as a signal to radar detectors if its ever again placed for sale. This is because radar detectors are illegal in several states, and a federal law prohibits truckers from using them. Had it refused to comply with the FCC order to quit selling the Zapper, the company faced a fine of $10,000 per day.

: rule too. After all, I had to learn how to use one, so dropping it
: from the curriculum must certainly have been a dumbing down exercise. And
: while we're at it, lets bring back teaching how to use Napier's bones.

Learning how to use a slide rule is an excellent way to understand the mathematics of logarithms which are what all those Db things work on. The original point, however, is not to pick on the particular skill - it is to exercise the mind. I found, for example, that learning code, especially from listening to QSOs between other hams on the air, gave me a better ability to copy phone conversations in marginal conditions. Not everyone will have the same exact results, but a general statement can be made that exercise is good, for the mind as well as the body.

Greg KO6TH

BTW, I used a slide rule to take the Advanced test. They do still work.

IMCT is now available via e-mail.

Several hundred have already been downloaded from
the ARRL BBS.

IMCT takes beginners and advanced students from
1-20+wpm, several testing methods exists, as well as
an on-screen radio to tune around and copy QSOs.

Send mail to HAM-server@GRAFex.sbay.org
Use the GET command to retrieve the program (zipped and
uuencoded) under the following path...
/hamradio/morse/imct.zip

Use the INFO command and the INDEX command if this is
your first time with the HAM-server.

check 30, 40, 50...ethernet's supposed to be around 10 MHz so the 2nd harmonic would be 20. this is just for starters...it really could be a lot of things.

: Shade

Shade,
The first question you need to ask is if you are going to learn code and increase speed merely to upgrade (without any intention of actually using code) or if you intend to operate code regularly. Investing in a key and electronic keyer for the former is not economically wise, but if you intend to use code at higher speeds, it definitely is.

There are four basic types of keys:

1) Old-fashioned straight key. You make each did and dah manually by depressing a key handle. You determine the speed, spacing, duration of each did and dah. This is good for slow speed and for learning code. For most people, speeds above 15 wpm is laborious.

2) Bug. Mechanical device which can be set to automatically send dits at various speeds, but dahs are sent manually. Used by some "old-timers", but not recommended for neophytes. Definitely not.

3) Standard electronic keyer and paddle. Usually a single-paddle key connected to an electronic device which forms dits and dahs automatically. Press the paddle with the thumb and get dits; the index finger and get dahs. "Complex" letters like "F" (dit dit dah dit) require thumb-hold for two dits; release; index finger press for one dah; release; thumb press for one dit; release.

4) Iambic electronic keyer and double paddle (or "squeeze" key). Basically the same as 3), but with a significant difference: the "iambic" keyer allows you to insert a dit (or dah) without releasing the dah (or dit) paddle. The "F" simply involves squeezing and releasing the two paddles...a single movement. Of course timing and duration of the squeeze are critical.

If you are serious about code, you will probably eventually want to get one of the electronic keyers (3 or 4 above). Personal preference will dictate which one. The standard single paddle keyer is probably easier to learn than the iambic, but for lots of higher-speed work the

iambic sure saves physical work, and once mastered it is nearly effortless even at very high speeds.

Bencher keys are mostly double paddle keys made for iambic keyers, but you can always use a double paddle key (and even an iambic keyer) as you would a single paddle key and standard keyer just by using the same back-and-forth movements.

I would strongly suggest you visit a code-proficient ham and have him show you the options in person. Don't be afraid to ask questions and play with his keys. He should enjoy your interest. Good luck!

1412. Interesting RFI Problem

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-21 00:00:00 UTC
From: brannick@ix.netcom.com
Message-ID: <3n7cup$nn@ixnews3.ix.netcom.com>
Source record: 248215

I have a interesting RFI problem for which I would sure
like some practical solutions..

The feed point of my 40/80 trap dipole is very close to my 2 meter
antenna.. (an Isopole).. for a long time I have had a problem wherein
RF is getting into my computer keyboard when operating 80 meter
digital modes....I had the problem on 40 also but ferrite rods in the
keyboard cable solved that one...

Quite accidently this afternoon I discovered that the source of the
RFI creating the problem on 80M was the feedline for the Isopole..
disconnect it and pull it away from the station... No more problem...
Obviously the RF from the dipole is being induced into the 2m antenna
and/or coax and traveling back down the 2m feedline..

Due to some space constraints I really cannot do the obvious.. move
the 2M antenna away from the dipole...

I was hoping some savy individual on the net could tell what I could
do to solve this one. I have already tried lengthening and shortening
the 2M feedline.. no improvement....tried same thing with dipole
feedline.. knew that would'nt do it..

The feedline for the Isopole is .405 diameter cable..not too easy to
work with..

Any constructive suggestions would be appreciated.. was wondering if
disconnecting the shield on the station end of the 2M feedline would
do anything... but I am obviously gropping...

1413. QSO in an Airplane

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-21 00:00:00 UTC
From: NEEDHAME@ZIAVMS.ENMU.EDU
Message-ID: <950421002525.5411@ZIAVMS.ENMU.EDU>
Source record: 248216

Offhand, I would say that the whole thread on holding a QSO in an airplane has gone too far. Here are my reasons:

1. A student pilot should concentrate on flying and knowing where he is. He should use the aircraft radio as necessary. Any additional tasks and he will probably be saturated, causing him to lose track of one or the other.

2. After a resonable amount of experience, a pilot may in fact be able to operate a ham rig while airborne. However, this should be while operating VFR, and not while in a traffic pattern. The traffic pattern is entirely too busy for someone to attempt to use a ham rig there.

I think this has already been covered by enough people, so can we perhaps let this one die out?

And, yes, I am both a pilot and a ham -- I hold a Commercial, an instrument rating, and private priveleges in seaplanes. All single-engine, but looking to upgrade soon. Too bad Bash isn't into aviation. ;-)

Lever activated rubber suction cups designed for moving plate glass windows
work better than anything else I have ever tried.
You can even add an aluminum plate under the handle to the existing
handle bolts to mount antennas to, without difficulty.
Although they are expensive, they don't scratch the car or truck and will
stick to any smooth surface metal or not.
They work exceptionally well on camper roof vent covers also, when staionery.

: SBK>The callsign server software at CALLSIGN.UALR.EDU, port 2000 ...

: Great Steve, but how about some brief instructions on how to use it?
: Does it have foreign callsigns or only domestic USA?

I'm not Steve, but I've been watching the development of his and
Dale's database server, so I'll answer for them.

You have to be able to telnet to a specified port number, in this case
2000 (just like Buffalo.) Under VAX/VMS, use
TELNET/PORT=2000 callsign.ualr.edu
Under *nix, use
telnet callsign.ualr.edu 2000
After it connects and gives the LOOKUP> prompt, type
help <ret>
for everything you ever wanted to know about using the interface.
(Well, almost. The rest is left as an exercise for the student. |-)

Please observe that the site is UALR, not ULAR. This is a common error.

About foreign callsigns: All the data in this database maintained at
UALR are from the FCC database of current ham license information via their
ftp server. No license issued by any foreign government is included.
If other countries' regulatory agencies start offering their license
databases on the Internet, we might be able to interest Steve and Dale
in carrying this info, too, especially if either of them gets hooked
on DX. ;-)

Whether I'm Canadian, American or whatever...I beleive it is your
responsibility to be patriotic to YOUR country.

Could someone explain the Rat Shack "drag 'em thru the mud" attitudes ?
Did you have a childhood problem with Radio Shack ?

BTW... Your Nissan may have been assembled in the USA BUT most of the parts
came from Japan and much of the profits went back there and you do
realize that it is the quotas enforced by your country that forces the
import companies to at least assemble ("Made in USA...hardly !) their
products in a country where most of their product is sold.

I'm currently awaiting the delivery of my Ten-Tec 2 meter mobile kit
...thank you very much ! I'd sooner keep the money in North America
(remember NAFTA ?) I'd buy Canadian if I could but unfortunately
we don't have any manufacturers up here but I do homebrew much of my
equipment.

Anyway, this isn't about patriotism, it's about your attitude !
What did Radio Shack ever do to you ? BTW...I have and never had any
affiliation with RS. I just don't understand how you came up with your
conclusion about the 2m rig being a piece of junk ???

What was your name again ? (I got your call this time !)

,rec.sport.basketball.college,r

Associated Press Release 4/21/95:

CHAPEL HILL, N.C. - Dean Smith, the winningest active coach in men's Div.I college basketball, shocked the coaching community by announcing a new and highly controversial approach to running his program at the University of North Carolina. "After thirty-four years of coaching men's basketball at UNC, I think that I have finally figured out what it takes to develop a truly successful basketball program." Smith said, "It has taken me a long time, but I have now decided that from this point on, I will only recruit `marginal-qualifiers' to play basketball at the University of North Carolina. By affording young, underprivileged yet gifted-athletes the opportunity to receive a higher education, I hope to legitimize the UNC program and start a new and long-lasting tradition of excellence."

When asked if his blue-chip recruits have all qualified according to the established NCAA standards, Smith replied; "Of course, but from now on all recruits must have had to have taken the ACT or SAT at least three times before qualifying, and they must score no better than the absolute minimum on those tests."

Fans from UNC rival Duke University, whose basketball team won two back to back National Championships in 1991 and 1992, were questioned about Dean Smith's new policy; "This is an outrage, coach K would never do such a thing, Duke would never allow such a low standard of athlete attend the University." Another fan said, "This win-at-all-costs attitude is pathetic and classless, we don't let a blue-chip recruit in the door unless they qualify on the very first try."

We're currently shopping for new transmitters for our 12 stations.
All we are being offered are solid state units. The manufacturers
are telling us that tubes *are* obsolete. Oh, they'll make us one
if we insist, but they say we're just being retro. The solid state
units are modular, and degrade gracefully, allowing you to swap
failed modules without any downtime. The projected savings in
annual tube replacement costs should more than cover the extra
power required to run the solid state units.

>appreciate it.

You've answered your own questions. Drill the hole and get your
power directly from the battery. One hopes you have already drilled
the other necessary hole in the top for the antenna. 99.99% of
mobile radio problems can be traced to fear of drilling holes.

Your noise is coming from the brake control box. Perhaps you
could suppress that noise with chokes and caps, but if you'll
just hook up the radio properly, it shouldn't be a problem.

I never thought I would say this about an amateur newsgroup, but I
think this is a BAD idea, too narrow in focus and with too limited a base
of users.

1426. New Fair Radio Catalog- Mil Radio Question

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-21 00:00:00 UTC
From: "Kenneth M. Gianino" <gianino@sbctri.sbc.com>
Message-ID: <3n8cla$3md@sbctri.sbc.com>
Source record: 248229

Who received their new Fair Radio catalog this week? The first item on the front page is listed as an HF receiver/exciter, rack mount with AC supply, ECCM board removed and as "unused". It listed an RT number (sorry, I dont have the catalog with me) that I could not locate in last year's Janes. The miniscule picture looks like a rack mounted Harris RF-5000P. Anyone have the real scoop on this equipment?

>subject of wideband microwave technology from the Handbook??

The reason for this, Erik, is that 2 years ago a large number of
us QRP'ers complained to the ARRL about not having enough 40M
QRP CW articles due to a huge and unnecessary number of microwave,
GUNN diodes, and gunnplexers articles.

We:
> Mutter-grumble-bitch-kvetch!.... 'd
so much that they listened to us.

They can't please all the people all the time.

Peter: No valid reason? On the contrary, it's very easy to produce
a 1750 Hz tone by whistling. These repeaters undoubtedly require
a short burst of that tone. `Whistle-up' repeaters used to be
common in the US.

ID>amateur bands. One needs MONEY _to use_ a cellular phone. Once the HT's
ID>been purchased, the only cost is batteries. The codeless Technician class
ID>license, as all classes, has no fee. There are many repeaters with wide
ID>coverage (especially on 2 meters, one of the most popular bands for portable
ID>operations) in this country, and in many of the more remote areas no cells
ID>exist. In these cases, the cellular phone is useless. After the Northridge
ID>earthquake last year there were reports of cell sites sustaining damage. In
ID>that case, hams were able to maintain simplex communications, but those
ID>dependent on cellular phone companies were out of luck. These opinions are

ID>own.

ID>Guy DeRose, KE6JTN

yes, one does need money, lots of it, and GOOD CREDIT...something they
don't tell you before you head down to the store to purchase your nifty
motorola 550 flip. the only way I was able to get a cell phone was to
have my roommate's girlfriend front her good credit so my roommate and i
could have phones. we have the money, good jobs, yet because of a few
past credit problems the cellular industry wanted us to put down a $1000
deposit EACH for our phones. without her, we wouldn't have phones.

now i'm in a mood...this country and it's goddammned class divisions are
becoming more and more extreme as the years go on. cellular phones and
who can and cannot have them are just ONE of the many differences there
are between the wealthy affluential people and the schmucks like my
trying to make a living and improve our lifestyles. this really is
beginning to piss me off, but i guess it's how the morons who we elect
to run this place we call america want it, otherwise there would be mahy
more oppertunities for people like me.

now, before i completely burn myself up on what i write, i'll just say
that as far as local emergencies go, i do have it made. i have my cell
phone, 3 phone patches, and several repeaters i can call for help on
should i need it. i'm lucky.

The 11-meter CB band was originally allocated for Industrial and
Scientific use: diathermy, rf melting, etc. It was then opened
for hams (permitting duplex operation), then diverted to CB. It
is probably still ok for the original industrial etc uses.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 22/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 22 APRIL AND FORECAST FOR 23 APRIL - 25 APRIL

1A. SOLAR SUMMARY
Activity: high

Flares Max Fadeout Begin End Freq. Sectors
M7/2F 1151UT probable lower European
M1/-- 1742UT none

Observed 10.7 cm flux/Equivalent Sunspot Number : 84/26

GOES satellite data for 21 Apr
Daily Proton Fluence >1 MeV: 4.3E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 6.1E+07 (normal)
X-ray background: B1.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
23 Apr 24 Apr 25 Apr
Activity Very Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 23 Apr: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 21 Apr
Learmonth 9 1112 3333
Fredericksburg 10 1
Planetary 10 3

Observed Kp for 21 Apr: 1000 1111
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
23 Apr 25 Unsettled to active, with possible minor storm
periods.
24 Apr 15 Unsettled
25 Apr 20 Unsettled to active
COMMENT: IPS Geomagnetic Warning 11 was issued on 19 April and is
current for interval 22-25 April.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
22 Apr normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
23 Apr normal normal poor
24 Apr normal fair poor
25 Apr normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
22 Apr 30 near predicted monthly values

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
23 Apr 15 Near predicted monthly values
24 Apr 0 About 15% below predicted monthly values
25 Apr 10 About 15% below predicted monthly values
COMMENT: IPS HF Communications Warning 16 was issued on 19 April and
is current for interval 23-26 April. MUFs at Townsville and Hobart
were near predicted monthly values. Spread F was observed at Hobart
during local night.

What is the name of Dean Smith's group and who are the members?
Specifically, who is on drum and bass? Do they have anything recorded?
On what label? Tell us more about this exciting new Reggae group. (Or am
I posting on the wrong newsgroup?)

|>
|> Yes, we should, IMO. In fact, we should *definitely* teach EEs how
|>to use one - not because they'll use it in their work, but because it
|>(a) demonstrates principles of logarithms, and (b) requires the user to
|>*THINK* when doing calculations, because the user has to decide *where to
|>put the decimal point in the answer*.

This is great. Let's continue along this line of reasoning with this
analogy. To learn about logarithms, one should spend many hours learning
how to properly use a slide rule. And learning to question an answer also
comes from learning how to use a slide rule because you were never quite
sure if you got the right answer from it. Somehow those arguments seem
extremely weak. Otherwise the obvious benefits of learning to master
a slide rule would have ensured their continued usage in schools.

But wait, you say some other means of performing calculations has come
along and we should learn both? At what point do we stop learning something
that is no longer being used? I guess Latin should still be required
curriculum for all students. Just when is something obsolete? The dictionary
defines obsolete as no longer in use or fashion. Certainly most obsolete
things were in use and had a valuable purpose to serve before they became
obsolete. Or should we require all students to learn the total of
mankind's collective knowledge?

And by the way, the comments made about "exercising" the brain or of
"discipline" are complete red-herrings. Anything can be used to exercise
the brain or discipline one's thinking. Just because something in the past
required mental exercise or thinking and no longer does, doesn't mean people
stop thinking. It's just we'd rather stop digging foundations with our
hands. Most rational people call this progress, not dumbing down.

>that need replacing?.

All the caps you need to get at are mounted on the display board. I
have replaced the caps with tantalums and due to the fairly restricted
space left the old ones in place. I have shunted caps. C22 through C25
and not only fixed up my display problem but also eliminated spuri
occurring every 10kHz above the tx frequency caused by the inverter
supply modulating the rf generation stages on the main board!
Best of luck

Wow, I never knew so many people had problems with the 202. I had to take the first one I bought back, it had a birdie on 146.76, which is what our local repeater is on. The salesman, also a ham, told me that was a problem on the early models that they had fixed, so he exchanged it and I've never had a problem with the second one. I used it for a mobile rig for about a year, it's been my packet rig ever since. I guess I just got lucky.

it might be a repeater frequency - but usually during dayton, it's tough to find
a blank spot anywhere on the 2m dial.

According to the definition you've kindly provided, CW is far from
obsolete, since its still in use, and in fashion, with a great number
of amateurs today.

Thought the tech. oriented folks here may be able to help... I am currently using call forwarding to another phone to circumvent
paying long distance charges for connecting to the Internet. The problem is the loss of signal strength during the forwarding process
(9 db according to the telco). This results in hit and miss handshaking. Is anyone aware of a device that can boost the signal at
my telephone jack? (the telco isn't).

Thanks for your help!

>The dictionary defines obsolete as no longer in use or fashion.

It is important to note that it does not say "of no value".

The fact that a product or idea is not in use or in fashion is a notoriously unreliable indicator of its usefulness.

From Tad Cook, KT7H
Seattle, WA April 22, 1995
To all radio amateurs

SB PROP ARL ARLP018
ARLP018 Propagation de KT7H

Solar activity was up last week, with an average of almost a 15 point increase in solar flux, and a huge increase in sunspots. Combined with low A and K indices indicating stable geomagnetic conditions, this produced good HF propagation. Solar flux is expected to taper off from around 90 down to 80 by the end of the month, and 75 during the first week in May.

There is a good chance of disturbed conditions this weekend, and again around May 4 or 5, both due to recurring coronal holes. Watch for a return to truly quiet conditions after May 10.

Sunspot Numbers for April 13 through 19 were 47, 67, 67, 81, 75, 64 and 64, with a mean of 66.4. 10.7 cm flux was 82.8, 88.3, 91.4, 89, 88.9, 89.9 and 91.8, with a mean of 88.9.

The path projection for this week is to Western Samoa from Kodiak, Alaska and Tulsa, Oklahoma.

From Alaska 80 meters looks good from 0630z to 1500z, and 40 meters from 0530z to 1600z. Check 30 meters from 0500z to 1200z and 1430z to 1630z. 20 meters should be good from 0230z to 1030z and 1730z to 1930z, and 17 meters from 1830z to 0800z. On some days 15 meters may be open from 1930z to 0630z.

From Oklahoma 80 meters should be open from 0530z to 1200z, 40 meters from 0430z to 1300z, and 30 meters from 0400z to 1400z, with a possible fade around 1000z. Check 20 meters from 0200z to 0730z and again around 1230z to 1330z. 17 meters looks good from 1730z to 0530z, and 15 meters should be open most days from 1800z to 0100z. 12 meters may be open on some days from 1930z to 2230z, and 10 meters on rare occasions over the same period.

As a condo-dwelling ham, I can see a use for this group. It would be
handy to be able to exchange information about invisible antennas and
RFI/TVI type problems, etc., in a focused group. I couldn't say how many
people woudlpost to it, though. Anyone else interested?

>
There is nothing in the rules that would prohibit the use of a keyboard
for copying CW. The ARRL VE manual (1994 edition, page 45) says "some ask
to use typewriters, personal computers or Braille typewriters. The
decision to allow the Morse code to be copied by any of the above methods
is left to the discretion of the VE team. The only concern we can
identify that a VE team may have is the noise or distraction such devices
might cause other examinees." They go on to say that the exam text may NOT
be saved to a file on a PC and that spell checkers may not be used.

Our VE team (Jefferson City MO) does not provide typewriters, PCs or
calculators but we will let people use their own if they bring them. We
make people with programmable calculators clear the memories first, but
that isn't even as big an issue as it used to be since the formulas that
apply to a given exam element are now printed on the front of the exam
booklet. (A decision I strongly disagree with, BTW)

Personally I find that my style of (somewhat modified from school-taught)
block printing runs out of steam at about 25 wpm but I can do OK up to
that point, by writing as many letters as possible with a single stroke
and not lifting the pencil off the paper. I do this with A, B, D, E
(C plus -), F, G, M, N, P, and R. Experiment a little, it's not hard!

David Horak (horak@convex.com) wrote:
: A friend of mine just received a FT530 as a gift and we modded it this
: weekend. He can tune the 800 band but it's all noise. We tuned around
: to various points in the band ;-) including the police trunking data
: channel and his 530 was deaf. I'd like to find out for him if this
: radio omits the circuitry for 800 on US models or if there is something
: special to receive 800. Everything else on the HT works fine. I'm not
: sure what the date code or serial number is.

I've done a little searching myself, because My radio is also deaf.

I think, from the best info I've gotten, is that the cellular phone
import law has caused yaesu to change the cpu so the mod allows you to
rx and transmit out of band, but it dosen't allow the processing of the
800 meg signals. I would like to know if this is actually true,
because it was the info I got from one radio shop. Everyone else
told me that I didn't have the right antenna or asked me if I had
done the mod - That's not in the question..

Its just deaf on the 800 meg freq's!

In article <798376354.AA01285@hamlink.mn.org>, k0hb@hamlink.mn.org (Hans Brakob) says:
>
> "WE'VE BEEN HERE FOR 75 YEARS, BY GOSH! WE OWN IT!"
>

Its always been my opinion that emergency communications in progress
at the request of the State Government hold a priority over other
communications. Hans, I've observed your comments in a variety of forums
over quite a period of time and, frankly, am surprised you don't see a
distinction for communications requested by official emergency agencies
that pertain directly and immediately to the protection of life
and property. Portions of the affected area were receiving as much as
21 inches of rain per day. I am not going to stand for his threats, nor
his interference during the event and can't see why we should takes his
attacks lying down afterwards. I would be thrilled if only there was ANY
enforcement of the rules (yes for ALL the violators).

Frankly, I have not been on 75 in months, but I will not sit by while
the real villian and instigator of the mess finds refuge and defenders
resulting from a lack of thruth about the situation that created the mess.

Myia's proposal is flawed by overbreadth and selfinterest, but a more
surgical approach might have promise for excising a specific practice
which is being used to intimidate, frighten and disrupt participants
and activities of ordinary amateurs.

Message-ID: <9504221522057181@welcom.gen.nz>
Source record: 248103

I posted these in 1994, but here goes again (many enquiries prompted !)

My set covers 118-136 MHz AM Aircraft (Rx), 137-174 MHz VHF FM (Tx & Rx), 400-512 MHz UHF FM (Rx only).

Exact coverage is controlled by a matrix of 8 tiny diodes within the set.These are suprisingly easy to get to compared with some sets !

Access these by removing the 4 12mm x 2mm s screws & splitting the case in 2 halves (remove battery first). The slimmer half (attached to the set front) has a visible copper heat shield over it, but the 8 diodes (known as D8- D15 in the service manual) are in the clear on the bottom L.H. corner. Removal of the SMD diodes D10 & D11 gives coverage as above.

How they're placed | | | |

x x | |

Simply desolder/ lift/ or snip out the 2 indicated with the xs

Yez can't win. Leave the same projects in the Handbook year after year and people complain. Take them out, and people complain about *that.*

Zack Lau just published some good material on wideband microwave technology on QEX a couple of months ago (January?--Can't find it in the mess that is my office).

>I agree but with different subjects missing from the 95 handbook.
>It appears that the ARRL handbook went the way of Unix -- it became

Probably more like there weren't new designs to publish. Also, the Handbook is covering a lot more ground this year, and some things had to go. Better that the old, long-repeated stuff goes, don't you think?

Another possible source could be a "leaky" computer. Looking at some of the signals in the computer, running say at 50/60 MHz, you will find divide by N counters all over the place, both on mother boards, and on daughterboards. If the noise is presetn at ALL locations over the net, and at nearly the same amplitude, suspect the LAN interface board(s).

I recently bought a DOS Morse code program from the HAM listed below. It is called PCCW and I can highly recommend it. He developed it himself and as far as i can tell there are NO bugs. It cost $20 and he will send a demo version (partial alphabet) for a few dollars. His name and address is:

Robert Lindell, N0YIX
5305 Holland Street
Arvada, CO. 80002-2962

I don't belive he has an E-mail address. Good luck -- ray

1465. 1x2 & @x1 Callsigns

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-22 00:00:00 UTC
From: bob@raddev.com
Message-ID: <3na0de$pv0@caesar.ultra.net>
Source record: 248107

Recently I posted a message making available all 1x2 and 2x1 callsigns for any area. The response was overwhelming and I suggest you apply early based on the number of pages I sent out!

Now the data is online. I need feedback about the WWW site though. The data is at http://www.raddev.com/biz/raddev/ at the BOTTOM of the page. Click on the area you want, then use the FILE-->SAVE command of your WWW browser. I would like feedback on how it works for you and your host WWW platform and browser software. It works for me on MAC/Netscape and SUN Workstation/Mosaic and Windoze/Netscape.

While your there, check out the Radio Devices stuff, that's why it's at the bottom of the page :-).

Bob

1466. Success finding contacts worldwide using Esperanto

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-22 00:00:00 UTC
From: wesarnold@aol.com
Message-ID: <3na1i2$4v8@newsbf02.news.aol.com>
Source record: 248108

This is to report my success in finding pen pals, stamps, postcards and business contacts from around the world. Believe it or not I have received over 700 letters and postcards from about 90 countries. Because 92% of the people on this planet do not speak English I had to learn Basic Esperanto which is 70% English and is based on international words. One can get by reasonably well by learning 288 words and some affixes. This easy to learn vocabulary is more like English than any other language and has speakers in 116 countries. There are thousands of Esperantists listed in special directories that enable one to email or write to them directly. Just pick the country. It is not meant to replace anyone's language rather is recommended by UNESCO to be used between languages. It is now starting to be taught in universities and schools around the world. For more information free FAQ (frequently asked questions) are in SOC.CULTURE.ESPERANTO. newsgroup. A small free packet of info is available from 800 828 5944 answering machine.

Hi Gary, not sure if you received my e-mail question as to what type of transmitters you're purchasing, but thought I'd reply with a post just in case.

To begin, the claims you're hearing from manufacturers may only be true on paper. Solid state designs require an attention to detail previously unknown to most tube-type manufacturers, and having worked in the LPTV industry, I can tell you that many of the current 1 KW UHF offerings are plenty buggy. The new designs do not always provide the features or reliability expected, and free repairs under warranty are of little consolation once the warranty expires. Nor will any of these companies (so far as I know) reimburse a client for downtime.

Also, unless you're currently working on the manufacturing side of the industry, it's very difficult to know which brands suffer significant failures at the factory, or how the product will react as a result of age or random failures. I once worked with a particular model of microwave TV transmitter that had a 66% failure rate of the GaAsFET finals before the product even left the test benches. The units that failed were repaired, often multiple times, until they survived long enough to be aligned and shipped to clients. The profits derived from these initial sales were sufficient to later resolve the continuing technical difficulties, but initial clients suffered greatly as a result of the switch to "more reliable devices".

I'm not saying you shouldn't buy solid-state, but caution is certainly advised in accepting paper claims in lieu of proven technology. In particular, never forget that the transition from tubes to solid-state can be mighty painful for any manufacturer, and that the sales department's goals may not be coincident with your own.

There's an implication in this gentleman's request that his friend is in BC, Canada.
If so, and if his friend is licensed, the equipment may not be illegal to buy or use.
On the other hand . . .

>disconnect it and pull it away from the station... No more problem...

I think there may be more here than meets the eye, but the first thing
I would try is a toroidal choke. Pick up a *high* permeability toroid and
wind three or four turns (more if possible) of the 2M coax through it. Don't
bend the coax too much when you do this - the turns don't have to be tight.
Hopefully, this will provide sufficient choking action on the shield to
alleviate the problem.

If this doesn't work, then you have to consider that the RF may be travelling
down the center conductor into your 2M rig and radiating out from the chassis
(or a connecting cable). Typical measures to bypass the line cord of the 2M rig,
as well as the line cord, mouse cable (?), speaker cables etc. of the computer
should be tried.

If you purchase a large toroid for the coax, it can be moved from one cable to
another. I always keep a couple of "test" toroids in my junkbox for exactly this
purpose. With luck, one particular cable will turn out to be the main culprit.

I've owned an HTX-202 since they were first available, and I have
no idea what he's talking about. The radio is powered by a diode-OR
circuit. The higher of the two voltages (battery pack or external DC jack)
picks up the load and the other source is switched off because its
series diode is back-biased.

Maybe he's got a shorted diode.

SB DX @ ALLBBS $OPDX.204
Ohio/Penn DX Bulletin No. 204

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 204
BID: $OPDX.204
April 24, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, W5IJU, K6OZL, W6YA, WB8LFO, 425 DX News, 4X6ZK, DF4RD, DL8AAM, DL9ZEA, IK2XSL, IK4CIE, YL2DX and DL9GOA & DXNL for the following DX information.

4S, SRI LANKA. Mario, HB9BRM, will be active until April 27th, as 4S7/HB9BRM. He can be heard daily at 1700z on 14222 or 21222 kHz and between 1900 and 2100z on 3780 or 7050 kHz. He is a IPARC-member and contacts with him add points for the Sherlock Holmes Award. QSL via CBA. Meanwhile, 4S7DA was heard on 14235 kHz around 0145z (QSL via W3HNK). Also, 4S7WP was heard active of 20 meters CW around 0100z and again at 1615z (QSL via Shanthi Perera, Box 80, Colombo, Sri Lanka).

A4, OMAN. Several operators from the Radioclub of Oman are now active from Al Ghanam Island (IOTA-new) until April 27th. They reported that they will be operating on all bands using the callsign A43GI. So far, the only QSNs reported have been on 20 meters CW around 14005 kHz between 2030 and 2230z. QSL via A47RS.

D6, COMOROS ISLAND. Adriano, IK2GNW, will be active from Comoros Island (AF-007) during the ARI International DX Contest, May 6 and 7. He will be there for one week (the week before the contest). Using a KW and wire antennas, his activity will be mainly SSB on 40, 80, 160 meters and WARC bands. QSL via IK2GNW.

FH, MAYOTTE. Adriano, IK2GNW, will be active from here 2 to 3 days before his Comoros activity beginning April 30th. Details of his operations are the same has his D6 activity (listed above).

DU0K, SPRATLY ISLAND DXPEDITION. Word from Robin, DU9RG, indicates that this operation was cancelled at the request of the Philippine's military. No other details were given.

FR/G, GLORIOSO ISLAND. FR5HG/E, who has probably gone QRT from Europa, was heard stating on 40 meters one morning that he will be returning to

Glorioso in about 4 months.

H44, SOLOMON ISLANDS. The 425 DX News reports that JA1OEM will sign portable H44 from April 25th to May 8th. Activity will be on all HF bands CW/SSB. QSL via CBA.

IL6, SAIL ROCK, ITALY (ATTENTION PREFIX HUNTERS!). Victor, IK4CIE, informs OPDX that he and others will be active from here using a prefix that has never been used, "IL6". Four stations will be active on 20/40/80 meters April 30th and May 1st (IL6/IK4CIE, IL6/IK4IDW, IL6/I4VJC and IL6/IK4XQM). The island does not count for an IOTA because of the small distance between the rock and the mainland, but it does count for the Italian Island Award and for WPX.

KP1, NAVASSA. Vance, W5IJU, reports that the Navassa DXpedition scheduled for the last week of April has been postponed until the last week of May due to transportation problems. He also reports that Al, WA3YVN (from the South Georgia group) has been added to the team. Al is working on the transportation problem and might be going along with the team to Navassa.

KH9, WAKE ISLAND. Tom, AL7EL, is planning a trip to Wake Island and wants to be active as AL7EL/KH9, May 17-23rd. Activity will be on CW and SSB with most of the operations to be on 30, 40 and 80 meters with a special attention to 6 meters.

OD, LEBANON. Zanek, SP7LSE, will be active for one year, probably as OD5/SP7LSE (callsign and bands of activity were not mentioned in the info that was sent to OPDX).

OZ, LAESOE ISLAND. Ullrich, DL2HEB, will sign OZ/DL2HEB/p from this Danish island which is located in the Kattegat group and has an IOTA of EU-088. Operations will take place from July 10-29th, in which Ullrich will be an entry in the IOTA-Contest. Activity will only be on CW, 5 watts QRP and 80-10 meters. Check both QRP and IOTA-CW frequencies.

QSL NEWS..... Jerry, WB8LFO, reports that a ton of 4U49, 4U1UN cards were put in the mail April 20th. The 4U50UN cards will be processed as soon as he receives the printed 4U50UN cards (which should be printed soon). Jerry states that he is working on the bureau cards with the help of Mike, AA8EU, and that these cards will be sent out soon. Jerry wants to thank everyone for their patience, and when he is 100 percent caught up he will announce it through the OPDX Bulletin..... Jerry, WB8LFO, has also reported that 5R8KH and 5T5KH logs have arrived on April 20th, and those awaiting cards will have to wait a few more weeks until Jerry returns back from vacation. Also, 8P9CW cards are being printed and they will also be processed after his return. "Thanks for your patience", Jerry..... Kevin, N4RMF, reports cards for his operations as 9M2ZZ in West Malaysia (October 1988 - September 1990) and YL/N4RMF in Riga, Latvia (August 1992), can still be obtained via his callbook address: Kevin Walton, P.O. Box 316, Culpeper, VA 22701-0316..... UPDATE ON THE PY0TUP CARDS: Dieter, OE2DYL, states the following: "Please let me clear up the situation. I am not TUP's QSL Manager! I am in contact with a Ham

in Brazil, who wants not to act as the QSL Manager. So I will send all requested QSL cards to him and he will bring the cards to Mendonca. QSL routes via PY1RO or others got wrong by "postsage killers". So a lot of Hams are still waiting for this rare one. So on April 29th, I will send all cards to Brazil....."

VU7, ANDAMAN ISLANDS. Angel, WA2VUY, reports that on April 21st, at 0200z, he worked VU2AU who had VU2JPS on Andaman Island with him. VU2JPS presently has an AM rig but can work CW. The VU operators are trying to get a SSB rig for the VU2JPS. Also, VU2JPS expects to receive a VU7 prefix soon. VU2AU said that he'll try to have JPS with him on the east coast long path openings. "This station has been rumored but he does REALLY exist", states Angel.

YL, LATVIA. During April 22nd to May 21st, Latvian operators will be celebrating 100 years of amateur radio. A special event station YL100R (Latvia, 100 years of Radio) will be active from Riga (the capital of Latvia) on all modes and HF bands, especially 160, 80 meters and the WARC bands. If propagation allows, 6 meters will also be used. A special commemorative QSL card will be available via: YL-100-R, P. Box 100, Riga-7, Latvia, LV-1007, Europe (EUROPE, NOT C.I.S., NOT Russia, nor anywhere else).

SV9, CRETE. Hungarian operators HA0HW, HA0ET and HA0DU plan to be active May 9-16th using SV9/homecall. Activity will be on 160-10 meters. HA0ET will operate the RTTY and AMTOR equipment, while the other operators handle the CW and SSB modes. During the CQ-MIR-Contest the group plans to operate as SV9/HG0D/p. QSL all calls to HA0HW.

MINIMUM SIZE RULE (MSR) ADOPTED FOR DXCC. After discussions and votes on MSR by the DXAC which took over a year (it began 03/01/94, not later as some are lead to believe and was announced publicly at the 1994 Dayton HamVention's DX Forum), the ARRL Awards Committee voted 5 to 2 to accept a modified ARRL DX Advisory Committee (DXAC) recommendation to add a minimum-size rule to Point 2 (Separation by water) of the Countries List Criteria in the DXCC rules. The new/modified rule can be found in ARRL Bulletin ARLD019. EDITOR'S COMMENTS: Over the next few weeks there will be a few individuals who will try to over analyze this new rule and make statesments that "DX IS...". I agree that "DX IS...", but DXing comes in many forms and awards (NOTICE the "s" after awards!). There are many different types of awards available to DXers, but this rule pertains to the world's most popular DXCC Awards Program. The ARRL DXCC Awards Program should have higher standards than the other award programs or it would be no different than the others. The MSR rule was added to help keep the integrity of the program......

NO BULLETIN NEXT WEEK! Your editor will be in Dayton to attend the HamVention. I hope to see you there..... 73 de Tedd KB8NW

I have finally posted the shareware I've been putting together. The application is a Windows-based logbook and station manager. I think its a good start to an industrial-strength system. Please give it a try!

The filename is LOGBOOK.ZIP. Scott Ehrlich has it currently at oak.oakland.edu for anonymous FTP. The path should be /pub3/hamradio/pc/logging. If you don't find it there, Scott's been busy so look into /pub3/hamradio/incoming and see if it's still in the in-tank.

Good luck, I hope you enjoy, and CUL!

Nobody - well almost nobody, is worshipping Radio Shack. They make a whole range of products, some of which work well, some not so well.

What you're getting is the natural reaction from folks who see nonsense messages such as "all RS products are crap" posted. And such messages aren't just wrong or ill informed, they are often accompanied by xenophobic ranting about non-American manufacturers.

When a LOT of people already own Radio Shack handhelds, are mostly satisfied that the radios works as intended, and compares quite favourably to other handhelds in many ways, those who post such messages are apt to come across, at best, as rather loose cannons.

A rational and lower volume comparison of the features of the radios, a critique of the operating charcteristics, etc would be far more effective (and useful) than "drive-by" postings of the "crap" variety.

Cross-posted to: rec.radio.amateur.homebrew,alt.radio.scanner,rec.radio.amateur.antenna,rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.policy,rec.radio.scanner

I need to know a frequency that can be used for a low power transmitter for "home" use, like a remote control or whatever, above 800 Mhz. I want to put out up to 300 mW, but would settle for 100 mW.

I really don't know where to look, so if you would please tell me where you got your data, it would be appreciated. I looked through my "scanner" listing and also the ARRL manual with no luck.

This is for use both in the USA and elsewhere, so it would be nice to have a freq that is open everywhere. (yea I know, good luck)

It needs to be "approved" by any local government, since it may become a product.

Please write me via Email, so as to not tie up the net, thanks!

1486. HTX-202 birdies?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-23 00:00:00 UTC
From: Matt_Spolin@hgsi.com
Message-ID: <Matt_Spolin-2304951431340001@genome7.hgsi.com>
Source record: 247995

Is the problem of birdies on the Radio Shack HTX-202 a common one? I also seem to have a birdie on 146.76 MHz on BOTH the HTX-202s I bought on sale. On one machine it's about S1-3; on the other, S5-7. Is this serious enough to warrant taking back both rigs?? Is there any minor adjustment to clear up the problem?
So far, we've only tried the rubber duck and the RS telescoping antenna - will the birdie disappear with an external antenna? Are there any other birdie frequencies observed with these rigs? I'm just getting started in ham radio and have learned a LOT from reading this newsgroup - your advice is welcome! Direct E-mail to John_greene at HGSI.com (I'm borrowing this computer for posting). I have questions - Radio Shack sales droids NEVER have any answers!

John Greene

1487. Re: FT530 and 800 MHz

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-23 00:00:00 UTC
From: shade@primenet.com
Message-ID: <3ne89h$pha@news.primenet.com>
Source record: 247996

I own an ICOM-Z1A and can set the HT in any of the freq's addressable by VHF/UHF. While I scan the 800 range, I pick up nothing. My HT cannot transmit to those bands, but I would guess that because I can set the freq there, that it should be able to at least hear them. But thus far, I get nothing.

I thought that once the frequency was set in the 800 range and I scanned it, I would get something. Thus far, however, I get nothing.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 23/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 23 APRIL AND FORECAST FOR 24 APRIL - 26 APRIL

1A. SOLAR SUMMARY
Activity: low

Flares: none

Observed 10.7 cm flux/Equivalent Sunspot Number : 77/16

GOES satellite data for 22 Apr
Daily Proton Fluence >1 MeV: 1.2E+06
Daily Proton Fluence >10 MeV: 3.8E+04
Daily Electron Fluence >2 MeV: 1.7E+07 (normal)
X-ray background: B1.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
24 Apr 25 Apr 26 Apr
Activity low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 24 Apr: 74/11

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 22 Apr
Learmonth 17 2334 3433
Fredericksburg 19 13
Planetary 20 10

Observed Kp for 22 Apr: 1202 3343
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
24 Apr 20 Unsettled to active
25 Apr 20 Unsettled to active
26 Apr 10 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 11 was issued on 19 April and is
current for interval 22-25 April.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
23 Apr normal normal fair-poor
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
24 Apr normal normal-fair poor
25 Apr normal normal-fair poor
26 Apr normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
23 Apr 45 about 15 to 30% above predicted monthly values

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
24 Apr 35 About 15% above predicted monthly values
25 Apr 25 Near predicted monthly values
26 Apr 25 Near predicted monthly values

COMMENT: IPS HF Communications Warning 16 was issued on 19 April and
is current for interval 23-26 April. MUFs at Townsville and Hobart
were near predicted monthly values. Spread F observed at Hobart
during local night.

Why is this discussion not appropriate to rec.radio.amateur.antennas
which already exists ... I personally do not see a need for a seperate
newsgroup.

From: Gerald Schmitt <ggs@aerie.lanl.gov>
Message-ID: <3nf2bc$ag0@newshost.lanl.gov>
Source record: 247999

First of all Hugh I NEVER said there stuff was junk.
What I said was I could not understand the worship of
the stuff they sell. The 212 is a bit more modern than
the 202 404 series but it is not any better than much of
what is offered. What confuses me is why this slavish adoration.
First it's a Motorola then it's a Yaesu then a Kenwood.
It is not any of those it is a Korean knock off no more no less.

I don't really have a grudge with Radio Shack in fact a bought
a multi-meter there today. I spent about 45 minutes looking
for something made in the US or Canada, no luck but I didn't
look at everything. I suspect the North American worker did
better on my Nissan purchase than with everything I have even
bought from Radio Shack. One question do you work at Radio Shack?
Please don't take offense I always wonder with the staunch defenders.

The FCC again says no to restructuring ham radio, a big tower victory in New York, and Newsline is headed to Hamvention '95. Join with us on Newsline report number 923 coming your way right now!

(*****
FCC WON'T RECONSIDER

The FCC has denied a petition for reconsideration to change the structure of amateur radio licensing in the United States. Rolf Jesperson, N3LA, had petitioned the FCC to establish three classes of amateur operator license, a petition designated as RM-8391 that the commission denied back in April of 1994.
So Jespersen the Commission for reconsider its decision. He claimed that supporters of his position did not know when to file supporting comments. He said that telegraphy ability and not necessarily telegraphy proficiency should be the criterion for the class of operator license obtained. He also claimed that his suggested new rules would promote growth in the amateur radio community and reduce delays in obtaining new and upgraded licenses.
But the FCC said that Jespersen's original petition had been denied because there was insufficient evidence to justify revisiting the issues he raised and that no comments had been filed on his petition. The FCC added that it has revisited the question of the structure of the Amateur Radio service on several occasions, the latest being in 1990 when the codeless Technician class license was established. The agency says that at that time the Amateur Radio community has once again confirmed its preference of preserving the code as an integral examination requirement to for the remaining operator license classes, adding its feeling that the Amateur Radio community in the United States sees the current telegraphy speed requirements as necessary and appropriate.
While the N3LA petition has been denied, it does not mean that the fight by proponents of codefree licensing is over. Several other petitions are known to be in the works that the FCC will soon be forced to deal with. And No-Code advocate are also busy politicking the delegates to the World Radiocommunications Conference to be held later this year. Those who are against the code are trying to get the need for Morse testing abolished, world-wide.

(*****
NZ GOES NO CODE AT WARC

New Zealand has announced that it will seek and end to mandatory Morse code testing at this years World Radiocommunications Conference. Specifically, the New Zealand government has directed its delegation to actively seek to

overturn world radio regulation RR-2735 that requires an applicant show proficiency in the Morse code before being granted a license to operate on amateur radio bands below 30 MHz. New Zealand says that its telecommunications authority believes that other world radio regulations contain what they call the minimum required Amateur Radio operator qualification guidelines for licensing hams. More importantly says New Zealand, repealing RR-2735 has the added advantage of permitting each country to establish its own criteria for ham radio licensing.
The decision by the New Zealand government to sponsor world-wide no-code licensing is a major victory for the political efforts of Oracle, the Organization Seeking Alternatives Through Code Less Examinations.
About a year ago Oracle began lobbying the New Zealand government to take a leadership role in abolishing Morse code testing. Few people gave Oracle any chance of success. Ham radio political leaders in New Zealand and around the world discounted Oracle as being a minor league player trying to gain a political foothold in the ham radio major leagues.
Now Oracle is a major force in the fight to abolish mandatory code testing. And as the result of Oracles success in its own country, other administrations are asking themselves if the time has come to bury the Morse code as a requirement for any class of ham radio license, worldwide. More on this breaking story in future Newsline reports.

(*****
LONG ISLAND TOWER VICTORY

Mark Nadel, NK2T is a winner. So are many hams throughout New York state as a result of Nadel's precedent setting victory that allows him to keep his tower and antenna. It's an important win for Amateur Radio as we hear in this report:

"It's a great relief after going through all this non-sense. It's just kind of like a new beginning." Mark Nadel, NK2T

That's the voice of Mark Nadel, NK2T. Nadel is the Long Island New York ham who has been involved in a court battle with the town of Hempstead over his tower and antenna. And on April 12th he learned that he had finally won the right to keep his ham antenna system. Nadel tells Newsline that its been a long fight but the only reason he won was because of something known as PRB One:

"The decision itself is strictly a PRB One decision. The town itself had protested the fact that PRB One was in place. They felt it was unreasonable, however they had no choice but abide by it." NK2T

The wording in the Nadel decision is such that it codifies into New York State law the recognition of PRB One. Nadel is quick to add that his PRB One success with Hempstead will help other New

York hams facing similar problems:

"I believe this really gives, the town of Hempstead is township and i'm sure a lot of other municipalities are going to look at this." NK2T

Nadel was supported by an organization called RADIO. It was put together by Frank Falon, N2FF. RADIO raised most of the funds to fight the Nadel case. NK2T says that now RADIO will turn its attention to helping others:

"There are some other situations that have come about on the, further out on the eastern end of the island. The other thing that has come out of this case is that RADIO is now going to get involved is with the possibility of some new legislation within the town. The town has shown the desire to sit down with the people from the RADIO group and work on a new ordinance." NK2T

Nadel says that he thanks the entire ham radio community for is support the past two and a half years. A special thanks he says goes to Frank Falon, N2FF, who stood by NK2T, all the way.

(*****
CCR

Meanwhile, the ARRL says that it is looking at the feasibility of various approaches to reducing the effect of restrictive covenants restricting amateur radio antenna systems. It now appears that neither judicial or legislative remedies look promising at this time.
The Leagues says that its study into CC&R's will continue in accordance with the directives of the 1995 Annual Board of Directors Meeting. In the meantime, the ARRL says that it is important to educate all radio amateurs on covenant issues so that they will not unknowingly enter into agreements under which their operating may be restricted.
The League's General Counsel and staff have been instructed to develop a guidebook dealing with restrictive covenant issues as they relate to Amateur Radio.

(*****
NEW CORDLESS PHONE FREQUENCIES

The Federal Communications Commission has voted to provide more frequencies for cordless telephones to deal with congestion on crowded channels. Fifteen new channels are being created. This to more than double the number of frequencies currently available for cordless phones.
The new channels are located in the 46 and 49 MHz bands adjacent to the channels now being used. This permits continued use of existing cordless telephone technology. This means that the new cordless phones will be able to make use of both the old and new channels.

(*****
US GRANT TO UKRAINIAN HAMS

From overseas, word that Ukrainian hams are the beneficiaries of a $24,987 dollar grant from the U.S. Agency for International Development. The grant made through the Eurasia Foundation, was obtained made by a proposal made by the Foundation for Amateur International Radio Service, a nonprofit public foundation founded in May 1991. FAIRS has charter groups in Ukraine, Guyana, Bangladesh, and Russia. The grant proposal was written by Executive Director David Larsen, KK4WW, and European Director Victor Goncharsky, UA5WE.
The gift monies will be used to fund the procurement electronics hardware to extend APLINK coverage to Kiev from the Western Ukraine, with nodes also going to Hungary, the Czech Republic, and Poland. An Internet gateway also is planned, as well as an additional APLINK station and an FM repeater in western Ukraine.
Delivery of the equipment is expected by early summer, and will include hardware for seven digipeater nodes, including terminal node controllers, radios, and antennas. About 35 Ukrainian amateurs have packet capability in the current APLINK system.

(*****
IRTS NEWS SERVICE

A new on-the-air ham radio news service has taken to the airwaves in Ireland. The broadcasting of Irish Radio Transmitting Society News in the Gaelic language began about a month ago. The IRTS newscast airs Sunday afternoon at 2:00 pm on 3.975 MHz. The bulletin also features a call-in segment after the news. Anchor for these newscasts is EI6GS.

(*****
WRTC DELAY

The second World Radiosport Team Championship has been delayed. WRTC-95, planned for July 1995, has been rescheduled for July 1996. Organizers of the Washington, DC event said that WRTC-96 will be held the second weekend of July 1996, in conjunction with the IARU HF World Championship. The WRTC committee said that the major reason for the postponement was to give financial sponsors more time to publicize their participation well in advance of the event. The committee also has decided to change from 50 two-person teams to 30. The time frame for qualifying contest scores for applicants will be expanded from five to six years, to include results published from 1990 to 1995.

(*****
DX

In DX, reports have surfaced that Egyptian station SU3AM is very active in on 20 meters SSB. QSL via DL5ZBV.

Also, TJ1JB, as 5X1B has been operating CW around 14.027 MHz between 19:30 and 23:30 UTC. He is working for the American embassy in Cameroon. QSL via KE9A.

(*****
Mc GAN AWARD

The ARRL says that there is still time to nominate someone for the fourth annual Philip J. McGan Memorial Silver Antenna Award, for volunteer public relations activities on behalf of Amateur Radio. The award is sponsored jointly by the New Hampshire Amateur Radio Association and the ARRL. Deadline for nominations is May 31st. Call ARRL's Public Relations Department for an official nomination form at (203) 666-1541.

(*****
DAYTON '95

As this newscast goes to air, the Newsline production team is getting ready to hop a 767 jet for the city of Dayton, Ohio and Hamvention '95. Making the trek this year are producer Bill Pasternak, WA6ITF, legal affairs editor Joe Merdler, N6AHU and anchormen Burt Hicks, WB6MQV, and Jim Davis, KU8R.
If you plan on attending this years Hamvention, be advised that Newsline is again hosting the Media Forum on Saturday, April 29th at 3 pm in conference room number 2. Newsline will also be taking part in the Friday afternoon Educators Forum from 1 to 3 pm and in the Bulletin Services Forum on Sunday morning at 9:30 am. Joe Merdler, N6AHU, will be holding forth on the Hamvention Legal Forum hosted by attorney Jim O'Connell, W9WU.
Look for the Newsline staff at these forums as well as at the Worldradio and Bonneville Music booths on the convention floor. At Bonneville you can also get to meet Andrew-John and Lissa Huddleston who are the voices behind the songs on the new "Seek You" ham radio country and western CD. See you all at Hamvention '95!

1492. Worked All CT Counties Rover Operation

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-23 00:00:00 UTC
From: kd1yvjim@aol.com
Message-ID: <3nf5eg$atj@newsbf02.news.aol.com>
Source record: 248001

Worked All Connecticut Counties Rover Station

In conjunction with the Connecticut QSO party (see previous announcements), the Candlewood Amateur Radio Association will operate a rover station to cover all 8 Connecticut counties. This station will operate the club callsign, W1QI, and will operate on the schedule shown below.

While the WACC Award is not tied to the CT QSO Party, contacts made for either award are elligible for the opposite. The operation of this rover station is intended to make it easier to obtain the WACC Award.

Each time period will be split between 3 bands, starting with 80m, then 40m, then 20m. Planned frequencies are 3915, 7280 and 14280 KHz, each +/- QRM.

Submit logs for the Worked All Connecticut Counties Award to:
Candlewood Amatuer Radio Association
P.O. Box 3441,
Danbury, CT 06813, USA

Period, UTC	County
Saturday, 06 May	
2000 to 2045	Litchfield
Sunday, 07 May	
1200 to 1300	Hartford
1300 to 1430	Tolland
1430 to 1600	Windham
1600 to 1730	New London
1730 to 1830	Middlesex
1830 to 1915	New Haven
1915 to 2100	Fairfield

Good luck for the WACC Award, and 73 de KD1YV

Dean Smith is like Ace of Base, just another flake trying to
buy himself a championship band. Dean's singing can't hold a candle
to the master, John Wooden, and never will! Everyone knows UCLA is
the Sly & Robbie of the dancehall park-cay (sp?) floor! The Bruin
band run tings in dis ere dance, and have the dub plates to prove it
hanging from the rafters! Gee, they only have, what, 11 gold records?
Guess they'll have to make it a even number now. :-)

BUSH DOKTOR sppcarso@ultrix.uor.edu a Trojan fan supporting a
Bruin band, yikes!

>(9 db according to the telco). This results in hit and miss handshaking. Is anyone aware of a device that can boost the signal at
>my telephone jack? (the telco isn't).

The telco standard maximum level is -10 dbm. The telco network is supposed to be transparent, but it seldom is perfectly transparent. Better modems, such as Hayes, are speced to work with signals from -10 dbm to -40 dbm. 9 db of loss should be well within design tolerances.

You can't add an amplifier to boost the signal to higher than -10 dbm on the transmit side without being in violation of the tariffs. You can add an amplifier on the receive side, but of course the SNR will be degraded. You'll need a 2 wire to 4 wire network, an amplifier, and another 4 wire to 2 wire network. The hybrid balance must be better than the gain of the amplifier or you'll have made an oscillator.

It sounds to me like the levels are marginal to begin with, if a 9 db loss makes the system fail. The telco is generally good about measuring levels at their test board to make sure that their system is within specifications. Are you using a good quality modem? Have you measured your input level to the telco network?

I'm not so sure that a slide rule teaches anything about logs, most users simply take the numbers printed on the rule at face value. It is a handy tool for ratio-proportion problems, however, as long as the number of significant digits is small. An engineer should be able to do rough order of magnitude estimates without recourse to either a slide rule or a calculator, however, as a simple sanity check on his work.

I find that a slide rule serves mostly as an engineer's worry beads. It gives his hands something to do while he focuses his mind on the problem. The latter is the key, regardless of the method used to manipulate the digits.

It's getting to the point that in order to live somewhere these days, it's necessary to waive all kinds of rights and otherwise regular privileges, including those pertaining to antennas that are normally at least partially protected by PRB-1. Condo and apartment living is becoming more common as single family dwellings are becoming less affordable and an increasing number of amateurs are being subjected to these severe restrictions.

The issues that might be addressed go beyond just a type of antenna. A rec.radio.amateur.low-profile newsgroup can deal with and provide help with both "stealth" antennas and the issues that make them necessary.

Last time I listened in the RACES net was on 3900. Last Thrusday
they were pretty well in idle handling income H&W traffic.

My son tells me that on of the 2 meter repeters is expiditing getting
donations to where they are needed.

Last time I watched TV they were working resecue teams in 20 minute
rotations. That usualy means that they have plenty of people to help
and are working them very hard.

Rain and cold North wind are hampering efforts. From the wx forcast
they migth get clearing cold wx tomorrow evening.

They haven't found any one alive in a day and a half. There some
place between 150 to 250 unaccounted for.

Chances are, your provider nukes messages after a certain period of "life".

Here's the mod:From: wa2ise@cbnewsb.cb.att.com (robert.f.casey)
Subject: TM421a TX mod file
Date: 19 Oct 91 03:23:18 GMT
Sender: news@cbfsb.att.com
Organization: AT&T Bell Laboratories
Lines: 30

copied from packet:
Msg# TSF Size #Rd Date Time From MsgID To
63056 BF 1307 1 14-Oct 1645 N2FWQ 49200_N2IMC MODS@ALLBBS ()
Sb: knwood tm421a mods

This mod is only intended for experimental applications only! Know what
freq you are on and don't use this mod if you are not for sure.
The TM-421a is capable of transmitting from 136 to 174 MHz when the following
modification is performed. The transmitter specifications will vary from
published in-band specifications.

1. Remove the top and bottom covers from the transciever.
2. Remove the knobs from the front panel.
3. Remove the nut from the mic jack and the nut from the channel selector
switch.
4. Remove the 4 screws that secure the front panel to the body of the
transceiver
5. Pull the front panel off the transceiver to expose the Control board.
6. Remove the 3 screws from the Control board. Gently pull the board off
the transceiver.
7. Cut the GREEN jumper wire on the Control board.
8. Install an MA141A chip diode or 1N914 diode as D209 on the Control
Board.
9. Reassemble the transceiver by reversing steps 1 - 6.
10. Reset the microprocessor by holding in the MR key as power is turned
on.

I haven't tried or verified this, proceed at your own risk. WA2ISE
And do not transmit outside of legal bands!

Cell phones are limited in range and to whom you can communicate with anyway.
At least with a handheld, you have more of a chance in getting a hold of
another ham and getting help. If a cell can't talk to the cell site, your out
of luck.

Kenwood TH79 Dual Bander Modification and Feature Guide r1.5 9/13/94
==========
Clayton Wagar, KD4IDN
920 West Crawford Street #7
Dalton, GA 30720

Here is a compiled list of modifications and features I've found for the
Kenwood TH79 Dual Band HT.

Thanks to the following for their contributions to this document:
Mike Musick, N0QBF
Cole Cunningham, AA7RD
Duane Voth, KC5BGV
Chuck Scott, N8DNX

Having had many other radios in the past, and certain to have many in
the future, I understand the anticipation of Amateur Radio operators to
find modifications to their equipment. I started this document because I
want to see _quality_ information circulated as quickly as possible, in
order to save a lot of time and effort for others.

If you have any other comments, mods, or information you would like to see
included in this document in the future, please send them to:
Clayton Wagar KD4IDN
yensid1@aol.com

Outstanding questions at the time this document was released:

* Rumor of a keypad modification to the radio for "Wide band" TX, RX. If you
know of this mod, please write to me, even if you wish it not to be
published. This would save a number of poor radios from useless torture!

Hope you find all of this information useful. Again, please send corrections
or additions to yensid1@aol.com

++
I. Disclaimer
++

Well, don't you get sick of this stuff? I know, I know. However, I must say that I cannot and will not be responsible for anything that might happen to your radio, your person, your dog, or other operators you might talk to with your th79. In addition, if you decide that, with your newly modified HT, you just absolutely must cause unlawful interference with another ham or another radio service, I won't pay your NAL. Really.

Oh, and while we're at it... The extended RX/TX modifications may require you to solder or desolder really, really small components. If you want to know how small, look at the tip of an average ball point pen. Smaller than that. It takes about 1/2 of a second to wipe out several components as well as fry the board inside the 79. Please be careful.

++
II. TH79 Description and Impressions, by Mike Musick, N0QBF
++

Lulled by the sexy small size, I succumbed (or, rather, the credit card succumbed) and bought a Kenwood TH-79 dual-band H-T recently. Already owning a TH-78, the comparison comes easy.

SPECS. The TH-79A is a U.S.-spec dual-band transceiver, featuring coverage from 144-148 and 438-450 MHz. Receive coverage is extended on the 2M side from 118 to 174 MHz with AM in the aircraft band; there is no extended UHF coverage without modification. Max power is rated 5W on VHF and 3.5W on UHF with a 12V source; max power with stock 600 mAH nicad pack is 2.5/2.0. There are three power levels for each band - high, low, and extra-low (30mW). There are 80 memory channels, with no evident expansion capability. U.S./Canada version comes with the CTCSS encode/decode option. Going price at a 7/17/94 hamfest was $480.

GENERAL IMPRESSIONS. Tiny, tiny, tiny. Imagine putting a small duckie on the ARRL Repeater Directory - except that the 79 is narrower by about an inch. With the standard battery and not counting the belt clip, the dimensions are roughly 2" wide, 5" tall, and 1" thick. The belt clip adds 3/8" to the thickness; I left it off so it would be pocketable, and, frankly, it fits moderately comfortably in my work slacks' front pockets, which

was surprising. It's tiny! (Oh, I said that already.)

The 79's keyboard has larger buttons than it's predecessor (lacks the cover, too) which are much easier to use. Control layout in general is better and even in just a couple of days I appreciated the change. No more ambiguous power switch - it's in the primary band volume knob in a normal OFF/ON/VOL setup. Secondary band volume control is on the "ring" of the freq/channel encoder knob in a coaxial arrangement.

There are no squelch knobs; it a key+knob function for both bands. Squelch control was, well, interesting. There are only six "settings", with usually only the lowest setting opening the squelch under no signal. Reading between the lines in the manual, apparently the squelch circuit is semi-automatic. I expected some limitations, but had no complaints under actual use - it worked well.

With my expected habit of putting it in my pocket, I like the control lock switch - it's *not* an F-key function, but, rather is a slide switch next to the PTT. No more fumbling around to unlock it. Unfortunately, the lock function does not lock PTT - that has to be disabled with the "Tx Stop" menu setting. I found this out the hard way by putting it in my pocket and inadvertently keying-up a repeater.

The 79 has an alphanumeric display capability of two lines of 10 characters, which is used in several ways. First, there is a "guide" facility, which provides online instruction for most operation features with a scrolling display. Then there is a "menu" function, which provides access to the settings which were normally done with obscure F-key commands in the 78. Setting the various functions is very clear this way. There is also a status review mode, where the more important settings are displayed.

Finally, the alphanumeric display can be set for each programmed channel. Seven characters positions are available, and almost the entire extended ANSI character set - that's right: lower case, symbols, and accented characters - can be used. However, alpha display is mutually exclusive with frequency display. Frequency display mode can be selected in case you forgot what was "underneath" your programmed channel ID.

++
III. MARS/CAP Modification provided by Mike Musick, N0QBF
++

Here is the MARS/CAP modification for the new Kenwood TH-79A dual-band HT. Usual disclaimers about doing mods apply.

1. Remove battery.

2. Open case by first removing 3 screws (#00 Phillips) on back
and 1 screw on side hidden underneath the rubber flap covering
the DC power jack. Gently pry apart starting at top; BNC
connector will move with back, knobs with front.

3. Spread unit out. Wires will "hinge" on the side with the PTT
button.

4. Looking on the back of the keypad (front) half, locate green
wire on upper left, just below the CTCSS decoder module.

5. Neatly cut this green wire, and tuck back in so ends won't
touch each other or other components.

6. Reassemble.

Programmed memory will be lost since the CPU will notice the
strap change and reset itself.

End result -

Before: VHF RX - 118.000-173.995 TX - 144.000-147.995
UHF RX - 438.000-449.995 TX - 438.000-449.995

After: VHF RX - 118.000-173.995 TX - 142.000-151.995
UHF RX - 420.000-449.995 TX - 420.000-449.995

Automatic repeater offset and shift selections remain normal.

And this tip comes from Duane Voth, KC5BGV...

"The MARS/CAP mod can be made without opening the entire case up. You
can fairly easily cut the green wire by simply (and carefully) removing
the CTCSS decoder cover and using a small pair of diagonal wire cutters."

++
IV. "Wide Band" Modification, provided by Cole Cunningham, AA7RD
++

Following is a modification for the Kenwood TH-79A Dual Band HT which
opens it up to tuning from 67-174 MHz and 400-511 MHz. Actual receive was
85-135.995 AM and 136-179.995 FM with reasonable (0.5 microvolt
or better) sensitivity at all the points I measured. Transmit was
136-179.995 and 400-511 with power dropping off at the ends but still
usable (about 0.5w on the high scale at the band edges).

As usual, I take no responsibility for the mods, or your use of the unit
after mod. Please exercise good judgement and don't endanger our ham bands
with your irresponsible actions.

The observations noted are all I tried and I have no further data.
This is such a delicate operation that one shot was all I wanted to do,
and when it worked I quit!!!

WARNING-CAUTION-LOOKOUT-ETC!!!
The diodes to be moved are microscopic!! About 1mm long by 0.5mm wide.

This mod should be done by professionals on a closed track only.
Children, do not attempt this at home. Requires extremely small soldering
tools and MUCH skill. I had a professional surface mount facility do mine...

1. Open the unit by removing three screws from the back and one under the
DC power input cover. Carefully separate the front and back pieces.
The two case halves may be disconnected by pulling the wired plug and by
prying the brown latch on the ribbon cable connector up enough to
release it.

2. On the front PC board in the lower right corner as viewed from the rear
with the knobs pointing up there are seven spots for diodes in a row,
with one diode missing.

```
|
o o o o x o o |
_______________|
2 3 4 5 6 7 8
```

The numbers are D302-D308, left to right, with D306 missing.

3. Remove D304, and D307. Put them away in a safe place (Just in case...)_

4. You should now have:

```
|
o o x o x x o |
_______________|
2 3 4 5 6 7 8
```

5. Reassemble and good Luck.

Enjoy, but don't create problems with the new capability...Wouldn't it be
nice if Kenwood would make a RX only mod with these capabilities and we
wouldn't have to worry about accidental transmissions where we shouldn't
be transmitting. I, for one, don't want or need to TX, just RX...

73, Cole, AA7RD
August 11, 1994

(Note - This mod also adds 2 more menu settings. One of which is an
AM/FM demod selector for the 300-400 Mhz band. To access this
band, select the VHF band, press F, then press the Low/Hi key.
Repeat to return to 144 Mhz. The AM/FM selector will allow you
to listen to Military transmissions in the 300Mhz band in
either AM or FM.
- Clayton)

++
V. Remote Base Operation with Kenwood 732/733
++

Kenwood has now simplified remote base operation of their mobile rigs
with the TH79.

I will not give a step by step on how to control the mobile rigs, since they are different. Hoewever, to really understand this feature, I would first get to know the remote control feature on the mobile very well. This makes the following explanation a little clearer!

To access this feature, hold [PTT] and [MR] while [POWER ON].

The display will indicate -RC-, which I presume means 'Remote Control'.

If you have correctly matched your DTSS codes, frequencies, etc, the dual bander's keypad now becomes a function pad. Pressing certain keys enables or disables functions on the mobile rig by sending the DTMF sequences for you.

Please note that all this fuction does is send the DTMF tones over the air to control your mobile rig. I have not made a list of what each key does, but as the 79 sends the DTMF tones, the display will indicate the function. (i.e. - RPT ON, RPT OFF, TONE ON, TONE OFF, etc.)

73 de Clayton
KD4IDN

And this from Chuck Scott, N8DNX...

"The "RC" function is configured to directly control radios such as the TM-732. In fact, if you look at the layout of the microphone remote commands for the 732 it very closely matches the key assignments for of the "RC" mode. Since I have a TM-732 installed in my car, I had a chance to try this out and it's VERY convenient. Everything from direct frequency entry with the "F" key to enabling X-Band repeat. I'm really surprised they aren't marketing this feature of the radio."

++
VI. Post Modification Spec Sheet, by Clayton Wagar, KD4IDN
++

Here is a small chart showing the measured specifictions of TH79 S/N 60300272 after modification. The measurements were made with an IFR 1200S Service Monitor, on the bench, with a 6V power supply. Your milage may vary - these are just what happened with mine, and I would suspect that most units are pretty similar.

++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
VII. Cross Band Repeat, from Chuck Scott, N8DNX
++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++

The TH-79 does go into X-Band repeat. Press the "F" key then the "MONI"
key to enter repeat mode. Use the same to return to normal. There is a
10 min transmit limit so it's not useable for long duration monitoring of
a continuous transmission. That's understandable in light of the number
of horror stories I've heard of people frying their HT's in repeat mode.

++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
VIII. Other Observations, Ramblings, Etc.
```

++

From Chuck Scott, N8DNX....

"Regarding the lack of a memory Lock Out function, I talked at length
with the Kenwood people. They have been inundated calls about this and
have told me that they are preasuring Japan to come up with a processor
replacement to fix this, perhaps as a retrofit. I encourage any owner of
a TH-79 to write to Kenwood insisting on such a modification at no cost
and asking that they be informed when it is available. I think this is
justified for several reasons. First, I have been told by another ham
that the official brochure indicates that such a feature is included.
Second, and more important, it is arguable that the radio is not suited
to the application without memory lockout. After all, it's an 80 channel
radio. To make effective use of that many channels REQUIRES a channel
lockout function. Without effective use of that many channels, the radio
is not comparable to the current standard for such a unit.

BTW, close inspection of the RF deck in my radio shows no obvious
missing parts. I didn't remove the board to check the other side, but
my suspicion is that the 800 MHz parts are installed. I'd be interested
in input from others on that. So far I've not discovered how to make it
display any 800 MHz frequencies though."

1507. Re: Icom IC-775DSP rig

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-23 00:00:00 UTC
From: dearnshaw@worldbank.org
Message-ID: <3nlglg$knv@minerva.worldbank.org>
Source record: 248016

Doug, I suspect the DSP is at the audio level, as it claims that it uses it on Transmit as well. Question: Does anyone know if this rig has a 6 meter capability (either built-in, or optional); a lot of recent Icom HF radios seem to feature 6 meters. (I wish the other manufactuers would follow suit and add 6 meters.)

With the arrival of this radio, I expect we'll be seeing an FT1100 or maybe a TS960 arriving on the scene soon - perhaps at Dayton?

Darrell, NR3Y

IW>My reccomendation is the low cost Alinco DJ 130t. low cost, good
IW>intermod rejection and easy to use. One of the best 2 meter choices on
IW>the market in my opinion. I was always under the impression that Alinco
IW>made substandard rigs, but I was wrong. I LOVE my Alinco....
IW>Tnx & 73
IW>Bill
IW>N3OGH

read the post a little more clearly. he said the 2500, not the 5200. i
have the 2500 and it rejects intermod better than any other 2meter
mobile on the market, and i guarantee that. i've had both the allinco
570 and 590 mobiles, and both are as bad as a wideband preamp with no
preselector when it comes to intermod. aside from this, the receiver on
my 2500 is far hotter than any handheld i've EVER dealt with. i've
pulled signals out of the mud that i couldn't even HOPE of hearing with
my alinco rigs, or even my icom h16, both in _and_ out of the 2meter
band.

just my $0.02 worth.

Island News is a bulletin sent via mail to subscribers.
If you want to receive it, via Internet e-mail please send a message to:

IK1TZO.inrete.alpcom.it

Island News, is edited by IK1TZO (Island Hunter and activator).
This bulletin born in Italian IOTA and islands environment. I'm member of
Diamond DX Club, and distributor and amministrator of Italian IOTA Directory
(on paper and software for EasyLog).

For this reason I'm in contact with Italian IOTA Check Point (IK1GPG),
G3KMA Roger Balister (RSGB IOTA Director), I8IYW Peppino (active DXer and
IOTA hunter), I1HYW Gianni (famous IOTA hunter), EA5KB Pepe, I1JQJ member
of IOTA Committee etc, and with main world DXpeditions.

I've dialy contacts with most active IOTA and DXer fellows, in Italy,
and Europe, if you have some questions about operations please contact us,
we try to help you.

If you have some questions about IOTA, rules, you can send a message to me.
If you have info about new operations, please send a message, I include them
on next bulletin.

Suggestions, comments, informations are welcome.

NOTE:
This bulletin can be freely distributed in BBS, PacketCluster in any
form, I encourage distribution.

I asked the same question a few months ago. I'll be watching to see if you
get any more up-to-date info.

At least for California, there are handy, laminated two-sided repeater
locator cards, about 5X7 size, one for SoCal and one for NoCal. One side
covers the 2-meter repeaters, and the reverse has 220 mHz and up.

1517. MORSE on the INTERNET

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-23 00:00:00 UTC
From: jackl@pinetree.microserve.com
Message-ID: <3ndn4d$61s@nuclear.microserve.net>
Source record: 248122

The code / no code debate continues to be fought, ironically, in ASCII. I think there is a solution to this dilemma.

In the future, all Morse antagonists will post here in ASCII, while Morse afficianados will post and reply with UUE-encoded .VOC or .WAV files.

Anti-Morse proponents will either be unable to determine what the other half is saying, or will be forced to copy Morse, building up their code speed to suitable levels.

Either way, a few weeks of this should end the debates. :-)

73,

Jack WB3U

I am thinking about purchasing the second iambic paddle for our radio club. We have two rigs, IC781 and IC735. We have been using Bencher's iambic paddle for IC781. The paddle for IC735 is worn out, so we need a replacement. We have been happy with Bencher's, but we would like to try a different brand if there is a better one out there.

I would be grateful if anybody can give his/her opinion about various iambic paddles such as Kent, Vibroplex, Jones, G4ZPY, and so on. Thanks!

The Tx/Rx set will easily do 30 MHz. spacing, but the problem is the bandwidth and the top (and bottom) of the curve(s). You can use the commercial set and sacrifice some of the isolation (probably more than you need) to get the width. The engineers at Tx/Rx can give you the info for their stuff.

** HF STARTER STATION **

If you're just getting started in HF ham radio, this is a great station without a great investment. All you need to add is a key for CW.
.

RIG: Kenwood TS-820 S lots of great features for its time - crisp, clear signal - great reports even under adverse conditions

Regular HF ham bands: 160 80 40 20 15 10 meters
Solid state but with tube finals = forgiving of SWR
Built-in AC power supply
RIT = tune receiver up or down, raise lower tone, avoid QRM/N
IF Shift = do-it-yrself narrow-filter, shifts passband, not frequency.
RF speech processor
full range metering
VOX
Monitoring circuit - as you transmit SSB
Operating manual; service manual
Kenwood mike

PLUS: MFJ Deluxe Versa Tuner II, model 949C

PRICE: $575

This was my only rig for five years - simple and foolproof - good features, yet not overwhelming when you're first getting on the air. This station will hold its value when you decide to trade up.

I'm near Philadelphia if you are local to me and want to try it out.

>
>>Jerry has good teaching materials. I've used the tapes and they helped me
>>to get up to 20 wpm. Unfortunately they didn't help Jerry, as the last
>>callbook I saw showed him as still having an Advanced license!

Isn't that also true of Wayne Green, who runs Morse classes and sells
tapes and stuff?

Perhaps the written exams were too tough for them... Probably they just
couldn't be bothered to become Extras, but it's still a little like a
vegetarian running classes on how to prepare meat.

There are plenty of old-timers who have made significant contributions to
amateur radio and who are still not Extra class - W8JK for one.

I'mn not sure what all this means - probably nothing.

Rick concerning your post on the USE GROUP REC.RADIO.AMATEUR.MISC

Let me tell you exactly what happened. I am DONDON and I have been involved very closely in this thing for quite some time.

I want go into great detail here. I will tell you that the Ga. hams were told that the matter was being taken care of by both the FCC and the ARRL.

So reluctantly the Ga groups just made room for MAN and worked on getting there nets out of the way earlier etc.... Well years go by with many many bad experiences occurring.

Well the US Attorney in Maine said she had recieved all of these things she cared to and advised us to ignore the man and suggested he seek professional help.

So Mr. Baxter begins to play loop tapes that run for days tweny-four hour continously. Now remember we can hear him but he doesn't keep us from having our nets.

These men are giants and Glen is a gnat! Well to make a long story short Fred Maia as a result of being asked many times when someone was going to do something about the situation hired an attorney and put the petition forth.

Now people have said that this was a business move on his part. That is rediculous! Do you really believe that will help his business enough to offset this??? Only overly educated small minds could develop that analogy.

I hope this helps....

Nice chatting with you..

Sincerely,
Don Simpson - ko4ta@mindspring.com

Gary I don't understand why you claim to be such an expert on the matter and
are able to set yourself up as knowing the intent of why things were done.
You should limit your comments to things you know about. If you say the best
of net was set up to jam K1MAN, you are one of two things, a liar or an idiot.
You determine which.

I am growing weary of people telling me why I am doing things as if they are
somehow omniscient. The Best of Net was not set up to Jam K1MAN. The Best
of Net was set up to be a gathering place for the hams that had been using the

frequency for years. As slightly before the Best of Net the 2100 gang met there until Glenn ran half of them off with his felony afadavits.

We were searching for something we could do that would be fun and informative. Half of the guys on the frequency wanted to keep going with the 2100 gang and I decided to do this because I thought it would bring something positive to a very negative thing.

The original guest for the Best of Net was WD9HSE Bob Nelson. Bob had a lot of experience with the gnat and I got him on the phone patch to talk to the guys on the frequency. I try my best when the Best of Net meets to not talk about K1MAN ANY MORE THAN I ABSOLUTELY HAVE TO.

I will be so glad when this whole thing ends. I tell you every time I read a post by you, your original suggestion about K1MAN comes to mind, you suggested blowing him up!

Gary understand we are sincere about this problem. We don't deliberately JAM anyone. As a matter of fact I turned on the rig last night to listen and see if I could hear anything on the frequency and all I could hear on the frequency was carriers. He is being jammed all right but it is not by anyone that I know. I am very careful to not come on frequency anytime he is own before me. I don't want to be accused of interferring with him. Even though I have been advised that I can ignore his transmissions....

The horse races are there because that is what we have been doing on that frequency for over 10 years. To not have a horse race would be abnormal. The history of the horse race goes back further than I can even trace. Jack Gheil was calling horse races 10 years ago. We have been having horse races on 3975 for many years before there was a K1MAN. The horse race generally occurs every time there is any type of gathering by the 2100 club.

I can't really understand how you can propose to be such an expert on almost every topic on this use group. Surely there is SOMETHING you don't know...

Sincerely,
Don Simpson - ko4ta@mindspring.com

From: Greg Smith <greg.n.smith@daytonoh.attgis.com>
Message-ID: <D7K1Hq.4Ln@ranger.daytonoh.attgis.com>
Source record: 247887

I recently purchased a 2m HT which I use mostly while driving.
I'd like to purchase a mobile unit but but I can't afford it.
I'm thinking of buying a linear amp (50W or so) and buying a better
external antenna to enhance the usability of my HT.

I'm new to amateur radio and the variety of equipment makes and models
is overwhelming. I don't want to spend a lot (under $175 for both the
amp and the antenna). Anyone have any suggestions for equipment
within that price range? Any brands to avoid?

Also: what's the conventional wisdom on thru-glass mount antennas?
I have an Explorer with heavily tinted windows. I assume metallic
compounds were used to tint the glass. Will tinted glass affect the
gain of thru-glass antennas?

Thanks in advance.

Source record: 247894

>>>From: Mark_Nash@hp-loveland-om10.om.hp.com (Mark Scott-Nash)

>>>Ok, wait a minute here.... Everyone here who claims the license is
"easy"
>>>to obtain already is a ham operator. I know people who would NEVER
be
>>>able to pass that exam (yes, I've seen it, it has quite a few
technical
>>>questions on electronics)....

The No code test is not very hard. If you are dilligent in studying
for
it. Ham Radio is a Hobby, a regualated radio service of the FCC, not
a
right.

>>>A couple of other things: Cell phones can be bought REALLY cheap!
And the
>>>service can be gotten for a lot less money than people think. No
license,
>>>no expensive radio to buy, and cheap service (especially if you only
want
>>>to use it for emergencies).. Also, if you want to use it for
convenience,
>>>you have it. ONE MORE THING! Cell phone conversations are
(legally, anyway
>>>totally private. Ham radio conversations are not even close..

I still would not use a radio service like ham radio or cellular radio
to discuss anything private. True that the cellular service is
pretected by law, but it is fairly easy to monitor and hard to prove
that someone was listening to a cellular call.

>>>From: erics@eicon.com (Eric Schultz)

>>>Good noon...

>>>i've heard that 911 service is up to the cellular company. and they
don't
>>>have to send you to the 911 centre either, they could patch you into
the
>>>local pizza delivery (though they usually choose the local police,
fire,
>>>or emergency station if not the 911 dispatch).

If I am not mistaken 911 service if your community has it should be available becuase just like here in Virginia they add a surcharge to your telephone bill they would add that to the service fee on your cell phone.

1541. Correction: Special Event frequencies

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-24 00:00:00 UTC
From: glago@aol.com
Message-ID: <3nf8bp$bu1@newsbf02.news.aol.com>
Source record: 247930

Correction to be noted to those interested in finding Sonoma CA's Valley of the Moon Amateur Radio Club special event station on the air April 29th.

The frequencies for the 20 meter band were out of the ham bands: should have read 14320 - 14350.

Also listen on 40 meters: 7115 and 7240, or thereabouts.

Info: Eran Glago KD6KVO
e-mail: glago@aol.com

Who said anything about usefulness? I've stated numerous times that CW has its uses. Being a barrier to using other modes of communication on the HF bands is just not one of them.

From: hmm@netcom.com
Message-ID: <hmm-2404951811300001@192.0.2.1>
Source record: 247932

I heard that you can check the FCC database here on the internet to see
what the status is of your license and see if its active yet or not.

Does anyone know how to do this?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 24/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 24 APRIL AND FORECAST FOR 25 APRIL - 27 APRIL

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 73/9

GOES satellite data for 23 Apr
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA (normal)
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
25 Apr 26 Apr 27 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 25 Apr: 71/6

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 23 Apr
Learmonth 19 3343 3443
Fredericksburg 21 21
Planetary 22 20

Observed Kp for 23 Apr: 4345 3324
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
25 Apr 20 Unsettled, with possible active periods.
26 Apr 10 Quiet to unsettled
27 Apr 10 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 11 was issued on 19 April and is
current for interval 22-25 April.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
24 Apr normal normal fair-poor
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
25 Apr normal normal fair-poor
26 Apr normal normal fair-poor
27 Apr normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
24 Apr 40 about 15% above predicted monthly values

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
25 Apr 25 Near predicted monthly values
26 Apr 25 Near predicted monthly values
27 Apr 25 Near predicted monthly values
COMMENT: IPS HF Communications Warning 16 was issued on 19 April and
is current for interval 23-26 April. However HF comms so far have
not been affected by the geomagnetic disturbances.
MUFs at Townsville and Hobart were near predicted monthly values.

Gerald Schmitt (ggs@aerie.lanl.gov) wrote:

: A lot of the responses stem from the unfounded almost
: religious Rat Shack worship. Rat Shack has a new mediocre
: piece of equipment out oh ecstasy. Then the wishful rumor
[...]
: Just a few observations watch me get flamed to complete your education

A while back, I was looking for a 2m HT, and RS had an HTX-202 on sale for $199. In response to my questions here, I received unanimous praise for the radio, which I am inclined to add to--it's a solid, well performing radio. Receive audio is very good, and reports on transmit audio are excellent.

I took a look at the HTX-212 when it arrived at the local Radio Shack. It also looks like a solid, reasonably well-constructed radio, with a large heat sink (nice to keep it from overheating). The controls all had a positive feel, etc. All in all, it seems to be about the same as entry-level 2m radios from other manufacturers, at about the same point.

If you're getting flamed, it's because you're being a jerk, not because you're criticizing Radio Shack. The fact that people consider some of their products to be good doesn't exactly qualify as "Radio Shack worship". In fact, it's not even close. "Oh joy, another Rat Shack piece of shit," however, tends to promote reactions that are, shall we say, somewhat more emotional than usual.

IOW, what's so bad about the HTX-212? The fact that it was made in Korea doesn't count--what is a result of that? What, in particular, do you find lacking in the design/construction/whatever to justify your virulent attacks against it and those who like it?

BTW, no, I don't work for Radio Shack, and I don't own an HTX-212. If/when I buy a 2m mobile, though, the 212 is high on my list.

I had a Physics porfessor in college that had an interesting way of
dealing with this. His exams were computer-generated, multiple-guess
and he devised each answer such that if you were not careful to do
the calculation exactly right, you could still obtain one of the
listed WRONG answers. Sure caught a lot of folks off guard, at
least the first time. I thought it was an excellent way to reinforce
some sort of mathematics or physics "sense" - an intuition as to
whether the result of a calculation is even in the same ballpark.

Radio Shack is giving phones away at no cost if you just pay the
activation fee (with GTE here). I see this same type of deal
advertised in the San Francisco and Los Angeles newspapers. Even
the Reno Gazette had such an ad. Since you're on sierra.net you
should read the Reno paper for these deals.

And why cross-post this to non-radio groups? That only creates
a lot of noise.

Pretty late to be asking this but I didn't think I would need it. Any of you folks in Dayton know if it is possible to RENT one of those 3-wheeled electric carts (NOT a golf cart) in the Dayton area. My ability to walk decreases with distance and just thought one of these might come in handy rather than having my brother push me around all day.

Reference: The Radio Amateur Newcommer's Handbook, 1940

The Radio Amateur Newcommer's Handbook was published by the editors of Radio magazine. Radio was a magazine published, beginning in the 1920's, for Amateur and shortwave enthusiast.
In the Handbook is a chart showing the allocation of the amateur bands. It was interesting to note that only small portions of the 80 and 20 meter bands were allocated to phone operation; 3900 to 4000 kc on 80, and 14.15 to 14.25 mc on 20, and this was restricted to the holders of a class A license. 40 meters was cw only, 10 was 28 to 28.5 mc for cw and 28.5 to 30 mc phone. The 5 meter band was any mode from 56 to 60 mc. The 2 1/2 meter band was all modes from 112 to 116 mc, 1 1/4 meters from 224 to 230 mc, and 3/4 meters from 400 to 410 mc. Mobile operation was allowed only on the bands above 28 mc. There was no 15 meter band, as that came after World War II.

The various modes allowed for amateur operation were:
Type A1 - Radiotelegraphy
Type A2 - Radiotelegraphy, tone modulated
Type A3 - Radiotelephony
Type A4 - Facsimile
Type A5 - Television

The license structure was quite different. There were three classes of license, A, B, and C. Class B was the entrant or "Novice" license. To obtain a class B license you had to pass a 13 wpm code test in both sending and receiving. Five minutes of copy was sent of which you had to copy at least 65 consecutive characters correctly. The written exam was made up of approximately 10 essay type question on theory. The class B license allowed you to operate cw on all bands where A1 was allowed, If you lived over 125 airline miles from the nearest FCC examining point, you could apply for a class C license by mail. It carried the same privileges as the class B. You could apply for a class A after holding a class B for one year. The class A required taking another another written exam on more advanced theory. The class A license granted you all privileges on all bands.
The book also contained some examples of some of the study questions that you might find on the class B exam. A lot of questions ask you to draw a schematic diagram of a simple circuit and describe how it works, such as; "Draw a simple circuit diagram showing the use of a grid leak bias on a simple vacuum tube oscillator and explain it's operation". Well lets see now, the grid leak connects to the grid, the choke connects to the plate, the ankle-bone connects to the leg-bone, the leg-bone connects to the knee....aw shucks. Or how about, "Draw a simple circuit diagram of a self-excited vacuum tube oscillator using

two tubes in push-pull arrangement". Push-pull, hmmm, I thought that was a two-way phone patch.
The advertisements were also very interesting. How about a Halli-crafters Sky-Buddy receiver featuring continuous coverage from 545 kc to 44 mc, six tubes, band spread, and built in speaker. Amateur net--$29.50. Or a Stancor 60-P self-contained 60 watt phone and cw transmitter for $44.80, less tubes, crystal, meter, coils and cabinet. Gee, what's left?
In those days a dummy load was a 40 watt light bulb, and a memory keyer was a little spring loaded lever mounted on a base that when operated up and down caused your transmitter to put out dahs and dits. Held down long made a dah, not so long made a dit. The memory was in the operator's head. It was 1940, and That's The Way It Was.

I've got a Kenwood TS-830 transceiver with a bad pass transistor
which is part of its 12 volt regulator DC supply.
It is Japanese manufacture. TO-220 package, NPN

2SA473(Y) is listed in the Service Manual as the type.

Anyone know what an American equivalent is?

Aninda DasGupta (add@philabs.philips.com) wrote:

: Is there a FAQ or recommended book, or any literature on packet radio?
Vast amounts! The best thing to do is to go to your local ham club; there you will find MANY people who will advise you. Many will disagree with each other, but I think it is still better than trying to do it by books!
: I am most interested in the protocols used, how it connects to the
: Internet, what API toolkits are available, how the nodes are
The connection to the 'net is illegal in many countries; I don't think it is in the USA, so there are some gateways, always voluntarily run. The owners of these gateways put out instructions on how to use them (from both sides) in this group from time to time - look out for them.
: connected, what wavelengths are used, what antennae are required, and
Most bands have a packet segment - VHF and above tends to be for local use, h. f. and satellites for longer distance (at lower speeds on h. f.).
Aerials: unless you are providing the network with a special link, and only in special circumstances then, a simple omnidirectional aerial should be used; a directional one will make you not hear signals from `behind' you, which will cause you to transmit packets at the same time as the station behind you, with the result that neither of you will be received properly by the station you are trying to address. (Packet uses shared frequencies.)
: who are the popular vendors of digital radio equipment. I have heard
I could try to say - Kantronics is one of the biggest - but your local club will be able to tell you the USA scene better than I can,
: of AMTOR (sp?). How does that tie in with things? I guess I am trying
AMTOR came before packet, and is still used, especially on the h. f. bands; it sounds like a bird chirping. I think it only uses capital letters. It can be used on direct links over some distance, I think.
: to understand the entire process (every detail) of how a message that
: I might send to a friend halfway around the world would get there and
: be retrieved by my friend. Once I understand the process, I want to
Well, the normal way is you would `connect' to your local BB, and when you get the prompt - very like using a 'phone BB - type something like SP (or S) G6JPG@GB7NNA.GBR.EU, to which the BB would respond `Enter subject', and then `enter message, ending with CTRL-Z or /EX on a line by itself'; once you have done this, the message would propagate round the world between BBs - in much the same way as it does on the internet, but taking hours (can be days to obscure bits) instead of seconds or minutes. When your friend logs into their BB, it would say something like `you have mail; type RN to read it'. The prompts and method of use vary slightly depending on what BB software the BB is using, but it is all something like that.

Of course, some amateurs use TCP/IP on the air (in fact the software used by many to do TCP/IP on 'phone lines was originally written for this, by KA9Q), in

which case it looks even more like the internet.

: buy equipment, get a license and start playing with the setup. As is

Well, there are roughly two ways of getting on the air with packet. Obviously
you need a transceiver for the band(s) on which you are licenced; for packet,
any old clunker will do - in this country, ex-private-mobile-radio sets, with
new crystals for the new frequencies and a bit of adjustment, are quite widely
used. To go with that you need either a TNC - terminal node controller - and a
dumb terminal (or computer running a terminal emulation prog.), or one of the
implementations that make the computer do most of what the TNC does, and a very
simple interface to the transceiver. (Such emulations are available for at
least the PC.) Each approach has its advantages; the PC-doing-TNC one is
almost certainly cheapest, while the TNC route allows more sophisticated things
to be done (and the performance may be a little better, especially on h. f.).
: probably evident from my questions, I am a complete novice at amateur
: radio. Any help will be greatly appreciated. Thanks!

I saw this in the "Newsline" sent out over the weekend:

IRTS NEWS SERVICE

A new on-the-air ham radio news service has taken to the
airwaves in Ireland. The broadcasting of Irish Radio Transmitting
Society News in the Gaelic language began about a month ago. The
IRTS newscast airs Sunday afternoon at 2:00 pm on 3.975 MHz. The
bulletin also features a call-in segment after the news. Anchor
for these newscasts is EI6GS.

Somehow the idea that 3975 kHz is a "broadcasting" frequency seems to
be spreading (unless for some reason it actually is in Europe). This
is a problem that seems to be getting worse instead of better.

Do other countries have the same restrictions that US hams do
concerning "broadcasting" in the ham bands?

1564. Ham FTP servers?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-24 00:00:00 UTC
From: Michael McAmis <michael.mcamis@valley.net>
Message-ID: <3ngc88$1df@dartvax.dartmouth.edu>
Source record: 247953

Hi, I have some ham radio software I'd like to make available to the folk crusing the Internet. Unfortunatly our local server (at Dartmouth) doesn't support an FTP server at the moment. Is there a home page or an FTP server that's on the net full time that I can use? How do you get things on it? Just for fun I tried FTP'ing files onto some of the popular servers out there, but as you might guess they don't allow write access.

Thanks, Mike/WA3ECT -- michael.mcamis@valley.net

```
TAPR Activities at Dayton '95
-----------------------------

Dayton is almost upon us and here is the list of TAPR activities and events
happening during Dayton. We hope to see lots of folks around and please
stop by the TAPR booth and say hi!

TAPR Booth
----------
The booth is located at the same location as the last several years. We
should have most items and kits available and another big membership offer
will be available to new members! Come by and say hi to the TAPR gang and
if you want, help out behind the table. The more the merrier.

Regional Groups Note: If you are with a regional digital group, please stop
by and chat with Greg Jones, WD5IVD about how TAPR can do things with your
regional group. There will also be a place at the booth to place regional
materials, so if you have something to hand out, drop it off.

Friday - TAPR Digital Forum
---------------------------
1:00pm - 1:45pm Introduction to Digital Communications
Greg Jones, WD5IVD
1:45pm - 2:00pm TAPR Update
John Ackerman, AG9V
2:00pm - 2:30pm Layer 1 and Radio Issues
Mel Whitten, K0PFX
2:30pm - 3:00pm TAPR/AMSAT DSP-93 Project Update
Bill Reed, WD0ETZ
3:00pm - 3:30pm TCP/IP Issues and Trends
Barry McLarnon, VE3JF
3:30pm - 3:45pm BBS Issues and Trends

PACK*BASH T95 - Friday Evening
------------------------------
A new event for the digitally-inclined ham, featuring:
* Buffet dinner (with cash bar)
* Nationally-known speakers holding forth on current topics:
* Bob Bruninga, WB4APR (Author of APRS)
```

* Dewayne Hendricks, WA8DZP
* Prize raffle
* Lots of Informal Discussion
* TAPR NET SIG and a second APRS SIG meeting

When?
Friday evening, April 28, 1995
Dinner starts at 7:00 PM, speaker at 7:45 PM
Everyone is invited to attend, but dinner is only available to those
with reservations.

Where?
TJ's Restaurant, 2462 Dryden Road, Dayton
(Dryden Road exit, I75 -- across from the Holiday Inn)
(Maps available at the TAPR booth)

How?
Dinner requires advance registration (by April 24th)
Come by the TAPR booth at Dayton to check on additional space.
Everyone is invited to come, but dinner is only available to those
with reservations.
Dinner cost is $16.00 per person, tax and tip included.

To register, contact:
TAPR (tapr@tapr.org)
Phone: (817) 383-0000, Fax: (817) 566-2544

Who?
PACK*BASH is co-sponsored by TAPR -- Tucson Amateur Packet Radio,
the national leader in digital communication -- and the Miami
Valley FM Association, Dayton's packet radio club.

(This is a replacement of the McNasty's event)

Saturday - BBS SIG Meeting

The TAPR BBS SIG will meet Saturday night at 7:00pm

Where: Radison Hotel - Premier Room
The Radison is located near the intersection of I-75 and
Needmore Rd. This is not far from Hara Arena.

New feature this year - CHAIRS !!!

This is a great opportunity to meet with fellow BBS Sysops and discuss
current events and plans for the future. TAPR membership is not a
requirement, this event is open to the public.

For more information, stop by the TAPR booth at HARA.

Tucson Amateur Packet Radio (tapr@tapr.org)
8987-309 E Tanque Verde Rd #337 * Tucson, Az * 85749-9399 * 817-383-0000

1567. Ham Radio & More Show at HamVention

Newsgroup: rec.radio.amateur.misc

Message-ID: <1995Apr24.131632@vax1.mankato.msus.edu>
Source record: 247960

Hello,,
I have sitting before me a pile of low band Motorola Motrac and Mocom radios. I was wondering if anybody has put these on 6 meters before and has any tips? I have converted high band without any problems and just wanted to investigate a bit before making the plunge. Also, some are single channel, while others are 2 channel. I figure for the 2 channel one that one should be the calling freq but I don't know what to put in the second channel. I am not familar with 6 meters and thought this would be a easy [cheap] way for me to play a bit. If you have any thoghts please let me know!

It is absolutely forbidden to put any money in a letter in France.
I mean this is really controlled and there are chances you letter will be stopped
by the French postal service and never be delivered. Not to speak of the employers
that keep the money for them.
The best way is IRC's, or better try to find French stamps, and send some of them with you qsl.
The domestic rate stamp in France has no value indicated on it, so you will be able to use it for years even
if the postal rate increases. (the value of you stamp increases also, so you make profit!). A Dx club
should really consider this solution for its members.

>So I took the time to download the call sign data base,
>what can I do with it now? I don't have 140 megs of hard
>drive space that I want this to take up.

This is exactly the best stupidity the FCC should have done.
After spending hours to ftp the database hundreds of hams suddenly understand
they will not be able to keep it because of hard disk limitations.
Others will download the whole database every week to be sure to have the last call signs, especially
when the vanity system will start!
Thank you for the bandwidth wasted on internet with that! I am working with internet, as a scientist, not that
I want to throw away all non professional use of internet, but it will die by itself with such ideas.

Now to try to find an answer: What I think the FCC should do is to put weekly AND monthly updates on the server
so one need to download the big file only one time and just ftp the smaller update each month.

I have to agree with Mr. Newkirk on the basis that the desire to obtain
an amateur license itself shows enough interest in radio and its technology
to grant some sort of operation. It don't want to say 'priviledges' since
the airwaves used to be public property although they are now being
auctioned off.
I don't see tradition as having much value in a highly technical hobby.
Is it traditional to operate through satellites?

>Governmental permission to transmit on these frequencies does not
>automatically produce competent operators.
>Jack WB3U

An amateur license is a ticket to learn more about radio, IMHO. It should
not be an indication of experience or skill but instead a vehicle towards
those goals. At one time the military was a strong amateur radio supporter
on the basis that it provided a large pool of self trained operators in
time of emergency. Maybe this is what you mean?

Since this is a dumb topic I have set distributions to USA and followups
to .policy which is a group that I no longer attend.

Matt
I just purchased the 202, & mine did not come with a birdy on .760. Could be a xmtr splattering in your area. I live in Los Angeles, and if there would be interferance anywhere, this should be the place. The 202 seems to have a solid rcvr even in RF ridden L.A. I've been following postings on the 202 for some time and have not seen any discussions about this before. Just thought I'd pass along these comments.

Early models did have a birdie there, but the RS supplier's factory made
internal changes to eliminate it. Take your unit back to RS and have them
call their tech/service support center for handling insdtructions. Most
folks were simply given a brand new unit in exchange for the old defective
one.

1577. The QRZ Anonymous FTP Server is alive and well...

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-24 00:00:00 UTC
From: flloyd@qrz.qrz.com
Message-ID: <3ngckl$56e@maple.enet.net>
Source record: 247966

This is just a reminder that the QRZ ftp site is alive and well, and
we've had over 21,000 transfers since Feburary of this year.

The QRZ FTP site has thousands of programs, data files, mods, etc.,
and carries the most up-to-date version of the QRZ Ham Radio CDROM.

Authors of ham radio shareware programs, data files, mods, etc., are
invited to contribute their materials to the QRZ anonymous ftp server:
ftp.qrz.com

I would also like to thank those who have volunteered in helping port
the QRZ source code to a wide variety or platforms. In the next
edition we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT,
SGI, Linux, AIX, and HP/UX executables, directly on the disc.

Notably not mentioned is Macintosh, which so far has been a bit
troublesome to put together. If anyone who can program in 'C' on a
Macintosh would care to volunteer, please let me know. Although
there is an experimental Mac interface at this time, I'd like to
make it an officially supported platform.

Please pass on any ideas, suggestions, comments, etc to:

flloyd@qrz.com

Thanks and 73,

-fred AA7BQ

dnewkirk@nai.net (David Newkirk) wrote:

> Now, now, don't keep shifting the target. You said *real hams*, and
> that's what I was responding to.

Ehh?? You lost me here, David. My target was operators who acquire
licenses which might be granted without ensuring any of the previously
mentioned skills or qualifications. This is what the basic tenets of
the no-code proponents would permit, because their rationale can be
applied to nearly every aspect of obtaining a license.

> Also, if what you really meant to say by *real hams* is *what WB3U
> thinks is a real ham*---you should say that, too. I like Part 97's
> view because it's the result of years of evolution and development
> assisted by many minds. Where does *your* view come from?

It goes without saying that my opinion is my own, but that doesn't mean
it was formed in a vacuum, or that I have an intolerant view on this
issue (hopefully). I know there are licensees who don't like CW, or
technical topics, or building equipment, or handling traffic, or operating
in contests, or emergency preparedness, or etc. But how can I consider an
individual who isn't willing or motivated to learn *any* of these subjects
to be a ham? Does the presence of a (proposed) brain-dead license change
their status, or the value of their presence on the bands? It certainly won't
change my opinion of them as amateur radio ops!

>Luckily, new hams are also allowed to learn--and long-time hams, too.

Yes, it's one of the best things about the hobby. Still, there's an
implication here that it's OK to give away the license now and trust
the operator to learn everything later. Good thing they don't do this
for doctors and engineers. I think they do it for lawyers, though. <g>

That's a pretty good bending of the definition of fashion. With your definition of fashion, Model T's and flint lock rifles are still in fashion.

Given that no other radio service requires the use of Morse Code makes claiming it "in fashion" pretty far fetched. I suppose those other services dropped their use of Morse Code for other less capable means. Yeah, that's it!

I would be grateful if anybody can give his/her opinion about
various iambic paddles such as Kent, Vibroplex, Jones, G4ZPY,
and so on. Thanks!

I've been quite satisfied with my Vibroplex iambic paddle. It has
large thumbscrews for easy adjustment. The knurled locknuts maintain
the adjustments very well. It's rugged. The price is reasonable.
The Vibroplex company was recently bought by a ham. (This only
matters to the "buy American, buy ham" influenced people. It has
nothing to do with the product itself.) It has a solid "feel".

To set the chronology straight, the "Best of 75 Net" was formed to jam K1MAN. There was already a longstanding feud going on 3975 kHz between K1MAN and a group of Georgia hams. Both are attempting to claim squatter's rights to the frequency. The "Best of 75 Net" was formed to bring in reinforcements to the feud. They hold "horse races" against K1MAN to see who can put the strongest signal on top of him. "Best of 75" started having guests on their "program" including W5YI. W5YI knew he was jumping into the middle of a feud when he agreed to appear.

I, personally think the slide rule comparison is a good one, but I can think of one better.

Consider, that when Fighter pilots are trained, they learn more than how to fly a jet, they learn HOW the jet flies, what makes it tick, and how different types of flying will effect the aircraft, this makes them a BETTER pilot because they know this limitations of the aircraft and the HOW and WHY of what happens. To a college student learning the basics of how a slide rule works, this make sno sense because the slide rule presents the HOW and WHY to the student, while the calculator only shows the WHAT. The slide rule backs up what the teacher is teaching and gives the student a greater understanding of the material, while the calculator only gives you the answer.

Ps. What do you do when your batteries go dead???
Tnx & 73
Bill

* University and School Amateur Radio Club List Version .08 *
**********************************************************************

April 24, 1995

Welcome to the University and School Amateur Radio Club list. The
purpose of this list is to provide information about amateur radio
clubs at schools and universities. The current editor of this list
is...
Jeffrey Luszcz N2TIQ
jeff@gauss.arc.nasa.gov

This list will be availible for ftp from the following servers:

oak.oakland.edu

Also I will be posting this list once every month onto the
following newsgroups:

rec.radio.amateur.misc
rec.radio.info

!!!IMPORTANT!!!
If you do NOT want your club's information presented here
then please inform me of this wish through email.
!!!IMPORTANT!!!

The current data format for submitting club information is....
--------
SCHOOL:
NAME:
ADDRESS:
CLUB OFFICERS
REPEATERS:
CLUB STATION:
STATION TELE#:
ORGANIZATIONS:
YEAR STARTED:
NUMBER OF MEMBERS:
BANDS ACTIVE:
E-MAIL ADDRESSES:
HISTORY
---------
If everyone follows this form it makes it easier to edit and
maintain the list. I see this format changing as the list grows
```

and new concerns become raised. Please address your email to me
as follows FAQ -(name of school). For example...

Subject: FAQ - Cornell University

This makes it easy for me to move the mail around and put it in
the right folders. I am working on getting this information into
a database which will let me change the FAQ around easier and put
it in alphabetical order. Watch this space.

The FAQ is now in alphabetical order, great day indeed.

DISCLAIMER:
Feel free to copy and disperse this list freely as long as it
remains in its original format. If you do not want your clubs
information in this list then email the list owner and tell him so.

Also...
I am unable to provide any other information regarding college clubs
other than what appears on the list. Either the organization has
requested that it be kept confidential, or I just don't know. If
you do find out, please direct such information to my submission
address above so that others may benefit from it.

****
* Here is the list *

BANDS ACTIVE: 80m-10m, 2m, 70cm
E-MAIL ADDRESSES: w5ym@cavern.uark.edu
HISTORY

Oldest license found - 5YM - dated 6/4/20, but there is anecdotal evidence that we may have been licensed in 1914. Microfiche confirms licensing in 1916 as 9YM - note the wrong district! That was corrected two months later. The station was active in the early '20s prior to the opening of KFMQ, the U of A's first broadcast station. Logs have been found for the '32-'34 period when the station (*W*5YM) was active on 'phone using a Class B modulation amplifier built as a class project. Loy Barton, inventor of Class B, was a graduate and faculty member of the U of A. Haven't found any relics from '34 - '49. 1949 we were granted W5JNI and our station was in the then-Business Admin building. We suspect the trustee knew nothing of the previous station as he was not in engineering. We returned to W5YM in 1952 and the club has been going strong pretty much ever since.

Bands Active:
HF, 2 meters, 440, packet
Year Started:
1913

Current Equipment:
Kenwood TS 450 (HF), Ameritron AL80B, Mosley Pro67B, and a
packet - Internet gateway.
Organizations:
ARRL affiliate since May 06, 1971
History:
The club was first licensed in 1913 under the call sign 5YA.
We have a certificate from the ARRL dated back in May 06, 1971, that
recognizes our club. We have a "Golden Jubilee of the ARRL DX Century Club"
certificate for over 100 contacts worldwide in 1987, such certificate is
dated back to February 05, 1988. There are no records showing activity
until the early 80's, we still have some of the older club constitutions
dating back to these dates. Currently the club meets once a month.
We conduct a net on Monday nights on both the 444.80 and the 147.24 repeaters.
We also participate in various community events such as races, and
thriatlons. Most of these events are perform in collaboration with
members of the East Alabama Amateur Radio Club, which is the local
club for non-students.

HF bands, 2 meter and 440 (some sat work)
E-MAIL ADDRESSES:
general membership: W6BB@violet.berkeley.edu
officers/board: hams@violet.berkeley.edu

HISTORY
I worked on this last year. Essentially, we were formed
in 1914 as one of the first stations on the west coast.
We started DX receiving experiments at this time, and
soon established skeds with the University of Washington
and a few other schools. Our first call was 6BB and dates
back to at least 1920. I think oneof our members was the
first woman to get a commercial radiotelephone operators
license in 1924. Early on we were also connected withthe
commercial station here at Cal, and did early broadcasts
from football games, alumni dinners, etc. Club fell into
decline in the1930's, but was revived after the war,
and has followed typical boomand bust cycles since.

World Wide Web URL: http://www.calpoly.edu/~dmalone/w6bhz/
HISTORY
We're still looking for our roots, but have narrowed it down to 1947.
That's about as good as it gets for now, but we're looking for more
history on our club.

Our club is an Engineering Department affiliated club, but recently we're
attracting members from other walks of life, adding to our diversity.
We're involved in ARES/RACES, with our station being capable of running
on our own emergency generator at a moment's notice.

We've recently obtained a high-level mountaintop site, and are working on
the basics there (ie: electricity, antenna masts, etc) and look forward
to expanding our local coverage. Current plans for the mountaintop include:
440 repeater linked to our 146.760 repeater on campus (w/autopatch)
2m crossband repeater (linked to 440 repeater) with two-tone paging
capabilities for ARES/RACES callouts
2m repeater on the WALA (Western Amateur Linking Association) system
2m digipeater on the Packet DX-Cluster
440 digipeater for high-speed digital (56kb?) for real-time Internet

Interests of individual club members includes DXing, ARES/RACES, FM
voice, packet, ATV, and 10GHz digital.

HISTORY
The club has been around for many years. The original
club was W0YI. It was founded over 75 years ago. The
W0YI club call is still maintained here at ISU by one
of our faculty members.

Our club has approximately 20 members who are somewhat
active. There are many more hams here at ISU, but many
of them are too busy with their studies and other clubs
to become involved with the CARC. We are always in
search of new membership.

Our members can usually be found on 2meters or 70cm.
At this point in time, there is very little HF activity
in the club.
Our club has been involved at ISU for many years. We have
meetings several times per month. Every spring, we set up

an open house display and help with communications for the
annual VEISHEA celebration, which is the largest student-run
event of its kind in the United States. We provide
communications for the VEISHEA parade, calling tow trucks,
ambulances, and the police if the need arises.
It is best for new prospective members or people
interested in the club to call me or Clyde Walter at
the numbers above. I am only at ISU during the Fall and
Spring semesters, while Clyde is a professor who is here
year around if the need arises to contact the club in the
summer months.

EMAIL ADDRESSES:
blazina@juncol.juniata.eduX-News: vax rec.radio.info:6152
HISTORY:
JCARS was started in 1981 with the primary focus of satellite
operation. We were the first Ham radio club in central Pennsylvania to have
an active satellite station and were early users of Oscar 8 and Oscar 10.
JCARS offered amateur radio classes from 1981 thru 1993 for the college
students as well as local citizens. We are going to resume these classes
this winter as well as offering licensing exams on a regular basis as we have
in the past.

E-MAIL ADDRESSES:
(open to anyone, not a closed list)
- rarc-l@knuth.mtsu.edu (list address)
- listserv@knuth.mtsu.edu (listserver)

HISTORY
The MTSU club has been around since at least the 1960s, first as a trusteeship of the Dept. of Industrial Studies, and now under the Dept. of Computer Science. Membership has been small because the historic mission of the University was that of a teacher's college (thankfully that's changing). The Raider Amateur Radio Club is a key player in the packet radio field, and its members provide part of the core support in a project to bring high-speed (56k bps and up) packet connectivity to the entire state of Tennessee, from Mountain City to Memphis.

secretary@w9bgx.nuars.nwu.edu
advisor@w9bgx.nuars.nwu.edu
nuars-request@w9bgx.nuars.nwu.edu (LISTSERVER)

HISTORY
The Northwestern Amateur Radio Society dates back until late
40s or early 50s. It has been affiliated with the McCormick
school of Technology and the department of Electrical
Engineering since its inception. The club has achieved many
awards over the years, including one of the very early 5-band
DXCC's.

In 1991 a storm took down our main tower and antenna, and the
shack had fallen into disrepair. However, in 1992 Drs. Allen
Taflove and Alan Sahakian took over the faculty advisor
position, and launched an effort to bring the station back on
the air. In the summer of 1992 a new tower was erected at a
better rooftop spot than before at a cost of over $10,000, and
faculty and student members together cleaned and renovated the
shack, and the old transceiver equipment was replaced. We
also pulled in Ethernet cabling for Internet, and got a
computer (w9bgx.nuars.nwu.edu).

We are currently looking into holding a course in the
Department of Electrical Engineering which will use the
resources of the Amateur Radio club, and hope it will increase
student participation.

HISTORY
We have logs going back to 1934 with comment on contacts made in
1925 and we have talked with hams that remember us from the 20's.
About this time WxYJ and YI were all college radio clubs.

SCHOOL:
University of Pennsylvania
NAME:
University of Pennsylvania ARC N3KZ
ADDRESS:

CLUB OFFICERS
President: Matt Gomez, AA3FQ mgomez@mail.sas.upenn.edu
Vice President: Eric Reiter, WI2N ericj@eniac.seas.upenn.edu
Technical Director: Jeff DePolo, WN3A depolo@eniac.seas.upenn.edu

REPEATERS:
see below
CLUB STATION:
Station 1 - Philadelphia (main campus)

Kenwood TS-940S, Alpha 76A, Icom 275H, Icom 375A, Icom 471A, PK-232,
80286,Azden PCS4000, power supplies, headsets, mics, Vibroplex
iambic, keyer,KLM KT-34A @100', Cushcraft R5 @ 60', 40m dipole @ 60',
KLM 2m/440 OSCAR,yagis, Diamond X200 @ 100', various other VHF and

UHF antennas, one tower on roof - top of tower is at 100', and all
of the usual accessories.

Station is in the engineering building on the 2nd floor. It's been
in the same room since 1924.

Station 2 - Valley Forge

Kenwood TS-530SP (soon to upgrade to TS-850), Dentron Clipperton-L
linear,Kenwood TM-742A 2/440/6m, Icom 271H, 80286, Telrex 5-el
tribander @ 40',3-element 40m monobander @ 70', Mosley TS-33 @ 40',
40m dipole @ 40',75m dipole @ 45', Diamond U2000, long-boom VHF/UHF
yagis, Hustler 2m G6,other VHF and UHF antennas, 5 towers total.

This station is on top of Mt. Misery at the U of P Microwave
Research Center. We go out to this station on weekends, for
field day, etc. It used to be a Nike Missle tracking station
back in the cold war days and now Penn uses it as a research
center. Great location - the highest point in the Philadelphia area.

Linked UHF Repeater System

Main site: Mt. Misery, Valley Forge, PA. 443.8+, 750'ASL, 2.6kW ERP
Phil site: Penncampus on top of high rise, 440' ASL, receive-only
Eagles Peak: Lebanon county, PA 442.400+, 1420' ASL, 800 watts ERP
6m remote: Mt. Misery, Valley Forge, PA 52.525 700' ASL, 200 W ERP
Addtional sites will be going up this spring/summer.

Co-sponsored repeaters

These two repeaters are on Penn's campus on High Rise North. We co-
sponsor the repeaters with the clubs listed:

146.685- Holmesburg ARC 440' ASL, 800 watts ERP, two remote receivers
442.700+ NEAR-FAR ARC 440' ASL, 700 watts ERP
ORGANIZATIONS:
YEAR STARTED:

E-MAIL ADDRESSES:
HISTORY
The club was founded around 1921 from what we can tell. The first
call sign that the club had was 3KZ. When they switched to the W
calls, we were W3ABT. In the 70's, when you could request a call,
we got N3KZ to get the old 3KZ back.

W2SZ sports its own Usenet Newsgroup. It's rpi.union.ham-radio.
Some off campus systems may not be able get it.
HISTORY

W2SZ was originally created as 2SZ by the Troy YMCA around 1910. It was turned over to Rensselaer Polytechnic Institute in 1917 where it has been providing services to its members and the community ever since.

The station provides Amateurs with an opportunity to keep in contact with friends at home as well as providing for the learning of radio and basic electronics. The station also provides a friendly and relaxed atmosphere where members can come to get away from the stress of classes and work.

W2SZ, known to members are Zed, is a friendly group of people that are willing to share their knowledge and help those who have an interest in ham radio to get, or advance, their license. In addition they are willing to share their knowledge in the proper maintenance and operation of both club and personal equipment.

The club currently consists of about 30 members and is located at Six Sunset Terrace, Troy, NY. It also has contact with many of the past members who have long since graduated from RPI, or community members who live in the Troy area. It provides the members with many contacts, and also provides the community with a viable method of communication through the repeaters that the club has. In addition to day to day communications, W2SZ also offers lines of communication during periods of crisis. Examples of the Club's community involvement were during the San Francisco earthquake, and during Operation Desert Storm.

NUMBER OF MEMBERS:
BANDS ACTIVE:
E-MAIL ADDRESSES:
Packet W1KMV @ KA1AZ.#SORI.RI.USA.NOAM
HISTORY:
Formed at some time around 1930, but known to be in operation by 1936 as the "Radio Club," encompassing both amateur and broadcast interests. (The University of Rhode Island was previously known as the Rhode Island State College until the 1950s.) Members played an active role in the founding of one of the original eleven college broadcast radio stations, now WRIU-FM.

Civil defense commitments have included operations during the Great Hurricane of 1938 and Hurricane Carol of 1954, in addition to numerous other situations. At various times, the club has done work in earth-moon-earth, satellite, microwave, and similarly exotic modes. URI ARC was among the first stations in New England to use packet radio.

Located for many years in Lippitt Hall, the club station was relocated to the top floor of the Taft Experimental Laboratory in 1986. Taft antedates the university itself by several years, having been built in 1889 to house the old agricultural experiment station which previously occupied the site of the Kingston Campus.

The W1KMV club station license was allowed to lapse, but was renewed by special FCC permission in 1982. Trustees for W1KMV since the renewal have included Wilson Lamb, K4OGP (now N5LFB?), and Prof. Ralph England, WA1YDR.

HISTORY
Herman Moench started our station in 1933
this is some more data about W9NAA, the rose tech radio club at rose hulman institute of technology. I was there from 1974 to 1978 (EE '78). Unfortunately, Herman Moench (W9NZH) died a few years ago -- he was the living history book of Rose having graduated in 1929 (or 26, i don't have the alumni notes here at the office) and then returned to teach in 1931 or 1932, i think. Herman officially retired in 1978 from his position as Vice-President but continued to work with Rose and other organizations up to his death.

The predecessor to the Rose Tech Radio Club turned into Radio Station WBOW (I don't know if the broadcaster is still on the air under that call sign or not).

In the mid-1970's, the radio club equipment consisted of a Central Electronics 100V transmitter, a Collins 75A-4 receiver, a model 28 Teletype, a tape reader and a tape punch (forget the model numbers..), a solid state terminal unit, a Regency HR-2B FM transceiver. Antennas were an 11-element 2 meter beam, a 3-element yagi and dipoles for 40 and 80 suspended between the school's water tower and the power plant smokestack (about 125-150 feet up). Also a Heathkit SB-200 linear amplifier was available.

The station was located on the east side of the main building (now called Moench Hall) at ground level next to classroom C-126, the machine shop and the psychology department's "Rat Lab". The station was a small room large enough for about 3-4 people to be in at once and had an extra wide door to accomodate equipment and people. The north wall had the equipment bench and shelves and there was a window to the outside and a window to the world on the inside so passersby could heckle the operators. Equipment line up was TTY, linear, receiver, transmitter, 2m radio. The RTTY TU, TD, and reperf was on the upper shelf. There was some space on the end of the bench where people could work while someone else was operating. (I want to say the room was about 14' by 8' but I'm not sure.)

Usually twice a year, we would have station cleaning days. Everything would be removed, the shack cleaned, stuff identified, junk disposed of, and everything put back into place in working condition. W9NZH would invite everyone out to his place for a cookout afterwards.

During the 1977-1978 year, Tim Daniel (ex-N8RK, currently in Singapore working for DEC) Kevin Anderson (WD9FRS at the time) and Paul Schmidt (K9PS) were instrumental in selling the student government on the idea that new equipment was needed to refurbish the ham shack. The CE 100V and Collins 75A-4 were replaced by a Drake R-4C and TX-4C that I understand was in service for 10 years. I believe they now have something newer (like a TS-430/440 or so..). The station was also relocated in the 1980's when Moench Hall was completely renovated and is now located off the main hallway near the front of the building.

During my senior year, the club was very active in events and public service. Several operating events were held (such as fox hunts) and the station was a major net control station for the snow emergency net that year (helps to have that 80m dipole up in the clear...8)). We made trips to area hamfests part of the club's activities including attending Dayton.

The Rose Tech Radio Club still today hosts meetings of the Wabash Valley Amateur Radio Club and holds radio classes for the public interested in getting their ham license.

HISTORY

We have a club call W0QEV that has been ours at least since 1947 which is the oldest log that we can find. The league claims that we have been affiliated with them since 1949 which makes us one of the older if not oldest club station in the zero call region. This far back though and nobody really knows. Someday we will have to search though old call books from just after the war to see just when that call appears.

The club started as part of the department of electrical engineering here. It became a student union organization around a decade ago and

as a result has a steady source of funds. As far as membership, if only that was as steady as funding. The club has students, graduate students, professors, university staff and even alumni. Probably around 20 members but only half that many are easy to get a hold of. There are always to few undergrads!

An addendum to the above. After the war st. louis became part of the zero district as opposed to the old nine district. We have reason to believe that the club was around even before the war, but don't know under which call or how we can research this. The ARRL doesn't know and the fcc doesn't even bother with this type of stuff.

==========

ORACLE's First Year Of Progress April 1995

On 17 March 1995, the New Zealand Ministry of Commerce (MOC) announced that it no longer considered the mandatory Morse requirement for amateur radio operation below 30 MHz to be appropriate as an international treaty obligation. This decision followed a year of intensive lobbying by the Organisation Requesting Alternatives by Code-Less Examinations (ORACLE). The following article provides a brief background to the events leading up to the MOC statement.

ORACLE was registered as an incorporated society nearly one year ago. The ORACLE constitution sets the main purpose of the organisation as being a lobby group, the approach being to lobby direct to administrations, as they are actually responsible for respective national and international rule making.

ORACLE's fundamental objectives are to seek alternative means of qualifying for full amateur radio privileges, with Morse code testing considered to be no longer be justified as a mandatory regulatory requirement in amateur radio.

The first stage of the ORACLE strategy has been to seek necessary changes to international radio regulation RR 2735, which currently sets an international requirement for competency in Morse code as a prerequisite to obtaining an amateur licence to operate on frequencies below 30 MHz. Once the international regulation is modified or removed, then each country can have a choice in considering whether or not to introduce other suitable ways of qualifying for full amateur radio privileges.

ORACLE Managers hold regular meetings and consider that one of the strengths of the organisation is in its collective ability to develop clear and assertive lobbying papers. Several letters and papers have been sent to the MOC (the Government Department responsible for radio regulatory policies) to explain ORACLE policies and how the international regulatory change could be achieved.

ORACLE is pleased to report that the New Zealand Government, by way of an MOC announcement, has recently adopted a position which sets out to remove RR 2735 from the international radio regulations. This decision by the New Zealand Government is regarded by ORACLE as representing the successful culmination of a concerted lobbying effort over the past year.

In the period prior to the MOC announcement, joint meetings were held between the MOC, ORACLE and NZART. The various points of view were considered by Ministry officials and a conclusion was reached. The following is a summary of the proceedings of these meetings:

The first joint meeting between MOC, ORACLE and NZART was held on 14 February 1995. Present were: Messrs Hutchings, Jenner, McGuire (MOC), Waghorn, Walker (ORACLE), Andrews, Johnson (NZART).

The purpose of the meeting was for respective participants to air views and for the Ministry to try and establish its own view, particularly from the aspect of how to treat the issue in the ITU forum.

* all participants had no disagreement that some changes were necessary to international regulations in order to bring amateur radio into the 21st century.

* removing the mandatory requirement for Morse code was seen as one of the necessary changes (if the amateur service was being established today, then Morse code would not likely be a consideration any more than other similar skills might be)

* specific qualifications and operating requirements should be left for individual administrations to decide.

Given the general agreement on the above points, the main issue facing the group was therefore one of accepting a process for moving forward. Another meeting facilitated by the MOC was to be held, at which time a way forward could be considered. Issues to be considered included:

* a "no change" decision would definitely result in ongoing lobbying by ORACLE to MOC or the Minister of Communications

* MOC reluctance to propose changes at the 1995 World Radiocommunications Conference unless there was evidence of international support for such a change

On 15 March 1995, a second joint meeting was held. Present at this meeting were Mssrs Hutchings, Jenner, McGuire (MOC), Love, Walker (ORACLE), Andrews, Johnson, McNeill (NZART).
The following summarises proceedings:

* that RR 2735 does not have much place in todays world

* the New Zealand Government requires the removal of unnecessary restrictions in the radio regulations, such as the mandatory Morse code requirement

* the MOC sees no benefit in a two tiered licensing system

* an intermediate step proposed by ORACLE, as a two stage solution, did not address the simplification of the radio regulations as sought by MOC.

The meeting resulted in an MOC letter explaining the position of the New Zealand Government regarding the future of RR 2735. The following is an extract from the text of the 17 March 1995 MOC policy statement:
==========

"At the present time RR 2735 effectively requires all administrations to verify a competence in Morse Code before the issue of an amateur licence to operate in the frequency bands below 30 MHz. The Ministry has now considered this provision quite carefully and has concluded that it is no longer appropriate as a Treaty obligation for Government."

"The licensing provisions of RR 2736 provide that "Administrations shall take such measures as they judge necessary to verify the operational and technical qualifications of any person wishing to operate the apparatus of an amateur station". There is clearly ample scope under this regulation for an administration to require competency in Morse or not as deemed appropriate. RR 2735 adds a specific obligation in regard to Morse Code, and in so doing limits national freedom but without providing any greater benefits."

"The Ministry has therefore formed a view that it is appropriate to propose the deletion of RR 2735 at the forthcoming WRC-95 and will now work to this end. Part of this work includes, as is usual, the prior discussion of draft proposals with other administrations and this will be undertaken in the first instance in conjunction with the Conference Preparatory Meeting in Geneva next week. As such discussions continue over the next few months the Ministry will refine any New Zealand proposals prior to the formal agreement by Government of the delegation brief. Clearly interested parties will be kept informed of the overall process."

"Turning to what national licensing policies might be adopted, should the proposal to delete RR 2735 succeed, I can advise there is no intention to change our present licensing policies or Morse code requirement. It is considered important that the present reciprocal licence arrangements are not unduly disturbed and this dictates a national continuation of the Morse code requirement in the foreseeable future. However the deletion of RR 2735 will allow any future changes to be adopted by administrations as they see fit, and at an appropriate time, rather than awaiting for quite some years before the item is able to be placed on an ITU WRC conference agenda. The international regulations will thus be flexible to enable administrations to respond to the needs of their national circumstances, rather than having national requirements unnecessarily limited by the International regulations."

==========

The outcome of prior discussions of New Zealand draft proposals with other administrations is not known to ORACLE at this time.

ORACLE hopes to be able to make a similar progress report of achievements in the forthcoming year.

Hello,
Is there anybody to do a QSO on next-week end with a switzerland station
(HB9HFP) to examine the capacity of a tranceiver ???
Leave me a mail to establish a sked...

>newsgroup.
>
As a non-ham retired electrical engineer who lives in an apartment, and
who has considered getting a license (not entry level), let me list some
of the issues:

1. RFI. This place is swimming in RFI. Cordless telephones, personal
computers, light dimmers (every apartment in this place has at least
one), flourescent lights----and the real classic, a leaky cable
installation throughout the compound.

2. Outside antennas, including "stealth" stuff like thin wire----not a
choice. No place to string it.

3. TVI. As mentioned, the cable TV system leaks like a sieve. Leaks
go both ways. The phone system is right behind it.

I think that any installation that emitted any serious RF power around
this place would have to be approached with great caution, and many of
the issues begin up front of the antenna.

Society.

Some snippets from the April Digital Journal

The Digital Journal this month has started a multi-part item
called Amateur Digital Communications -- What comes next?

The item looks at computers and communications and discusses
the possible developments such as voice recognition used with
packet, compressed digital pictures produced on the spot, not
previously composed ones, using tools such as a digital sketch
pad which can be used to send doodles, antenna layout
sketches, almost anything one can name in that direction.

As for future modes, the drive seems to be back to narrow
modes with the least bandwidth . For instance, Gin JA1ACB is
planning CW-RTTY (one tone, on-off Baudot) with the bandwidth
needed being only about 125 Hz. This mode is being called
Coherent CW by others interested in achieving the same ends.

With the frequencies being so crowded, future allocations
could be made on bandwidth requirements, not broad blocks of
frequencies as in the past. There is also a short look at
transceivers and what needs to be achieved in that field.

If you can gain access to this very good magazine, this series
will well be worth a read or even keeping to see how accurate

the forecasts are for the next ten years or so.

Next issue, Part Two will look at Environment, Operations, Public Service, Networks, Antennas and more.

IPS WEEKLY REPORT

---

14 APRIL - 20 APRIL

DATE OF ISSUE: 21 APRIL 1995

INDICES:

DATE 14 15 16 17 18 19 20
10CM 88 91 89 89 90 92 86
A 5 3 4 6 6 9 (10 ESTIMATED)
T 23 28 28 39 38 45 40

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 14TH TO 17TH APRIL, AND QUIET TO UNSETTLED 18TH TO 20TH.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE NEAR TO SLIGHTLY ABOVE PREDICTED MONTHLY VALUES 14TH TO 16TH, AND 18TH APRIL, AND 10 TO 30 PER CENT ABOVE FOR THE REMAINDER OF THE WEEK.

FORECAST (21 APRIL - 27 APRIL)

SOLAR: VERY LOW TO LOW.

GEOMAGNETIC: UNSETTLED TO ACTIVE 22 TO 25 APRIL, WITH POSSIBLE MINOR STORM PERIODS ON 22 APRIL, QUIET TO UNSETTLED OTHERWISE.

IONOSPHERIC: DEGRADED HF COMMS ON 23 TO 26, NEAR NORMAL OTHERWISE.

Notes of Interest:
RSGB reports that the prefix LN will be aired for the first time on amateur radio from 1-8 May to celebrate the 50th anniversary of the end of WW2 in Norway. LN1V will operate on CW, SSB and Digital modes on a wide variety of frequencies.

Bruno F5JYD and Eric F5SSM will sign TO7I from St. Pierre et Miquelon (FP) from 27 April to 6 May. They will be active on all bands (WARC included) on SSB and RTTY. QSL via F5JYD.

For those who have inquired, FT5XJ QSL cards have been received by several stations.

The VK2SG RTTY DX Notes are also available on Internet via Telnet or FTP at ab6z.amp.org. The directory is called /rttynote. For next week's bulletin send your bandpass and notes of interest to Bob, WB2CJL at W5KSI.#NOLA.LA.USA.NOAM

ARLD018 DX news

This week's bulletin was made possible with information provided by Rick, NE8Z, Tedd, KB8NW, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST magazine. Thanks to all.

HUANG YAN DAO, AKA SCARBOROUGH REEF. BS7H is on the air from IOTA AS-116. Operators BZ1HAM, BZ1OK, KC6KOU, KJ4VH, OH0XX and OH2BH want to provide one QSO for as many stations possible rather than make multiple band/mode QSOs with fewer stations. Check 3505, 7025, 14025 and 21025 kHz CW and 3785, 7045, 14195, 21295 kHz SSB. QSL via JA1BK. A pirate was spotted on 15 meter CW prior to 0830z April 13.

TANZANIA. Eric, OH2BBF, should be arriving at Ngara April 14 to start a two month stay. He is bringing a TS-50 and hopes to obtain a license. Eric will try to make side trips to 5X, 9Q, 9U and 9X. QSL via OH2BBF after he returns home.

CENTRAL KIRIBATI. Bill, T31JK is on the air from Canton Island. He operates on 40 through 10 meters with SSB and CW, though he prefers SSB. Check 20 meter SSB around 0830z. QSL T31JK via GW0OJK, Bill's home call.

BRUNEI. V85GA sometimes operates from club station V85BG on 20 meter SSB. It has been reported that a new 160 meter antenna has been installed.

AFGHANISTAN. Oleg, YA/UT9XL, has been heard on 14120 kHz around 1445z. He should continue to be active from the Ukrainian Embassy in Kabul for 2 to 3 more months. QSL via PO Box 207 Pavlograd, 323012 Ukraine.

WESTERN SAHARA. Tim, KC0PA, is now signing 4U/KC0PA instead of S0/KC0PA. He has apparently obtained the appropriate approval from the UN commander and thus the call sign change. QSL via VE9RHS. S0RASD has been active on 75 and 17 meters.

MADAGASCAR. Ben, 5R8DS, has improved his 80 meter antenna. He uses an inverted L 30 meters long and 15 meters high. The ground system consists of 24 radials each 11 meters in length. He is active mornings from 0230 to 0305z on 3606 kHz. Ben requests not to call him on his frequency unless you really hear him. QSL via Ben Witvliet, Box 404, Antananarivo 101, Madagascar.

MEXICO. Rick, NE8Z, will be signing XE3/NE8Z April 14 to 24 from various sites on the Yucatan Peninsula. He will operate 160 through 10 meters with mostly CW and some SSB. QSL via K8LJG.

As for one who has had to deal with using "hidden attennas" I feel this newsgroup would be highly useful. As for those who might not feel this way, dont knock it until you have had the :pleasure" of working Alaska or Hawaii using 30 ga magnet wire for your attenna. The contacts at times my be rough but just as rewarding as any contact that can be made using Full size attenna's.

Today I had a very nice RTTY QSO with an Italian station whose operator suggested I QSL either direct 100x100 or via bureau. Bureau and direct I understand; 100x100 has me totally bewildered.

I asked if he meant he wanted me to include a green stamp if I QSL'ed direct and he answered that his English wasn't that good (though obviously, it's better than my Italian, which consists of the word Ciao and little else). Combine that with the usual noise on an international RTTY QSO and I still have no idea what 100x100 means, though my best guess is that it really was just a green stamp request. Anyway, that's what he's getting, so I hope that's what he wanted.

Anyone else familiar with this term? Help me out: what's it really mean and where's the term come from?

We are still in need of more amateur radio operators and medics for the 1995 Bay to Breakers race in San Francisco on sunday May 21.

If you are willing to join us at 05:00 at 1550 Sutter St in San Francisco that sunday and work till 15:00 we will be happy to feed you, park your car, clothe you in a nifty T-shirt (one of only 100,000), and give you a cool red fanny pack.

We need licensed amateur operators to operate at both fixed stations and be part of our "Mobile Assistance Teams" on foot in the middle of the race. You will need a 2M handheld with enough battery to last all day.

We also need medical staff. EMTs, nurses, physicians are all welcome to join us on this joyus day of twisted ankles, chafed thighs, and full arrests. If you are both a ham and a medic we will use both skills to the fullest.

To join the team call 415-202-0673 and leave your name, address, phone number, call sign, email address, and any other relevant info on the voice monster. You will receive a packet in the mail soon thereafter.

You may also mail me and I'll make the call if you can't.

If you are willing to join us the weekend before for a prep session please email me.

Thanks, and please spread the word to all your friends and nets.

I ordered two Yaesu FT530's from Ham Radio Outlet late last year, in early December if I recall correctly.

When I got the two radios, I noticed that the serial numbers, and lot numbers of the two radio's were totally different. If I recall, they even had some difference to the model numbers. One had a small orange tag on it with the model number suffix, and the other had a small blue tag on the box with the information of that radio.

Since there was actually a model number difference, ie, one was a FT-530 AU and the other was a FT-530 AE (I don't remember the exact model number specifics), I called HRO and asked the salesman what the difference was. He did not know the answer, but gave me the number of Yaesu Sales, and I called them.

I don't remember who I spoke to at Yaesu, but the person told me that basically there was no difference in the radio's. He said that the FT-530 had to be updated because of the new U.S. scanner laws, and that one of the radio's that I had gotten could be modified for 800 receive and the other could not. He said that the lot number of the one that I had was a couple of months old, and that I had probably gotten the last one of that lot number from HRO.

I wish I could remember more of the specifics about the lot numbers, model numbers, and the color of the stickers on the box, but I can't.

I would think that any FT-530 bought in late 1994 or this year can not be modified to receive 800 Mhz.

Hope this helps.

1601. Re: W5yi reply

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-24 00:00:00 UTC
From: rickmcm@delphi.com
Message-ID: <9504232037592.The_Win-D.rickmcm@delphi.com>
Source record: 248027

I have been following this thread for a while.

I have a silly question about the real reason behind W5YI's proposal.

If I read this newsgroup correctly in chronological order, then I am guessing that part of the W5YI proposal is that he is trying to get even with K1MAN.

If I am not mistaken, I read a posting by KO4TA saying that Fred, W5YI was to be his guest on the "Best of 75 Net". I don't remember what the exact dates were.

I assume that Don's guest on his net was Fred, W5YI that week end.

I assume from following this K1MAN thread that Don's net, and his guest W5YI, were jammed by the K1MAN bulletin service that he transmits. I do not listen to 75 by the way, and have never heard the net or the K1MAN bulletins.

Now then, if my memory serves me correctly, the next thing that I read on this newsgroup about the K1MAN news service, or the Best of 75 net, was the press release saying that W5YI had made a proposal to the FCC to discontinue all bulletin services below 30 Mhz.

Would someone please help me? Did the events that I have mentioned above take place in the order that I thought they did, or am I mistaken? Did W5YI ever even get on the Best
of 75 net as K04TA's guest? If so, were they jammed by the K1MAN bulletins ?

I am just trying to figure all this out for myself, and need some help in the order of events.

I had a similar experience about 12 years ago when I was in Thule, Greenland trying to
communicate with friends and family back home. I was on 20 meters, and had been there for quite some time, when a net came up and started taking a list to work some DX station (I'll not name the net or the DX station). When I mentioned that the frequency was already in use, this net just proceeded to jam us off the frequency. It happened many times during my stay at Thule, and it was very frustrating for the net control station to come up on
frequency and tell me that I had to move because the net was going to start, and then
proceed to just jam us off the air.

>automatically produce competent operators.

Now, now, don't keep shifting the target. You said *real hams*, and
that's what I was responding to. If you're going to say something in
one post and then distance yourself from it in another post by
retroactively changing what you said, please have the grace to admit
it. Also, if what you really meant to say by *real hams* is *what WB3U
thinks is a real ham*---you should say that, too. I like Part 97's
view because it's the result of years of evolution and development
assisted by many minds. Where does *your* view come from?

Yes, indeed, permission to transmit in the ham bands doesn't guarantee
competency--just as permission to transmit in the ham bands clearly
doesn't guarantee one a well-balanced, salutary view of the service's
past, present and future. Luckily, new hams are also allowed to
learn--and long-time hams, too.Regards,

David Newkirk (WJ1Z)

VK2 Div President's message

This is Michael Corbin, VK2PFQ.

Well it's good news weekend at last. On Friday 21st April, 1995, as advertised, the N.S.W. Division of the WIA, had its day in Court. In attendance on the day with me were, Cesar Miranda VK2TCM, Peter Jensen VK2AQJ, Barry White VK2AAB, Eric Van der Weyer VK2KUR and Roger Harrison VK2ZRH, but..... He didn't sit with us. Hmmmmmmmmm!!!

The Federal Court is a funny place....when the Judge hands down an order, you can't get a copy of it unless you pay for it. If you want one in a hurry, type it yourself from the Clerk's notes and present it to the Court for authentation. Anyhow, I won't waste time with that, let's get down to what the Judge said....

Here are a list of points which are by no means verbatim or exhaustive. The full text will be published on next week's broadcast or included as an insert in next month's AR...Whichever the case may be. The important points are;

1) A.G.M. to be held on or before 1st July, 1995.

2) Peter O'Connell to be appointed Returning Officer.

3) Election in accordance with the M&As.

4) Any Balance sheets prepared by the present council to be treated as if there is no question as to the validity of the last council election.

5) Members will be allowed to submit motions to this A.G.M., provided they are submitted 24 days prior to that meeting.

6) Permission given to move a motion at the A.G.M. validating the events since the last election.

7) A further date was set by the Court for 17th July, 1995 so that we can apply regarding any matters which may arise from the A.G.M.

As I said this list is not complete or exhaustive.

A main point was that the orders of the Court and the application to the Court were not opposed. I repeat NOT OPPOSED and NOT OPPOSED by...ANYONE. If I remember it as it happened, it went something like this.

Judge: Does anyone oppose this application? Is there anyone here? Who are these people anyhow? ...Do they talk to one another by computer?....Eh, no your honour, they talk on radio ...and they talk a lot ... Who to?.... They talk among themselves do they?? Are they CB'ers? Do they use C.B. or Ham Radio? Oh they talk on radio do they? Like John Laws then? Oh heaven forbid. Does anyone wish to oppose these orders, "Oh so and so" He said, (indicating a Court Attendant),...." could you have a look outside and see if there is any forlorn looking individuals out there, who wants to come in here and talk to us on their radio? Attendant goes out and returns empty handed. Judge Einfield then asked for a final time. Does anyone oppose these orders? NOBODY SAID A WORD!!!Hmmmm!!

He had one criticism of the applicant and it went something like,..... "I can't understand why they waited so long to come before me. Was it time? Then he mumbled something,"Oh yes!" indicating a reply to something our Barrister said, "I see. It was a matter of cost....of course." He then went on to another point.

For my part I am happy with the outcome. The Court was asked to allow us to have our usual A.G.M. I did not ask the Court to decide the conduct of the last election as to whether it was correct or incorrect. All I wanted, was the court's authority to have another election and A.G.M. As is usually the case at this time of the year.... Mr justice Einfield gave us that authority.

Another point which I thought was important was that he seemed pleased that Mr. O'Connell was happy to remain as Returning Officer. His remarks were something like,...."Oh I see Mr. O'Connell has consented to be the Returning Officer." His tone could be described as one of surprised approval.

Now to the A.G.M. At the last A.G.M. and at a meeting I attended in Armidale I have received many requests from Country Members to have the A.G.M.at a time and place that would suit them better. The venue at Doonside met with their approval as it did not require them to wade through traffic to an inner city venue. They pointed out that meetings in the past seemed to revolve around the City members. I was reminded that they too were members of the Institute and as such were just as entitled to an opinion...You know. .. I agree with them.

Another criticism was.... You hold it too late and... you hold it on a Sunday. We don't get back home till after midnight, if these meetings run late. Taking all this into cosideration the following will be the case this year.....and I almost lost it from the audience at last Friday's Council meeting. Somebody commented that Doonside had... Bad vibes....Another suggested Rydalmere as an alternative. Wasn't that where one of the mob used to meet? Anyhow, Doonside it is for our Country Members. So Doonside it is! Time ll.00a.m..... Yes ll.00a.m. and SATURDAY NOT SUNDAY!!! That's Saturday 1st July... That will the country folk time to get here and time to get back if you wish. Didn't it used to be held on a Saturday morning, in the days of Atchison Street. I recall the place used to be crowded. This

year we have even allowed for a luncheon adjournment. There's a pub nearby that serves an excellent counter lunch. Everyone's welcome to attend. Members will be issued with a delegates card on the day. That will prevent those non-members from voting.... more details next week.

So get those nominations in, the time parameters will be provided by the Returning Officer in the Divisional News segments straight after this address. I hope to see a few country nominations for this council. When you consider it...consider it seriously, you will be required to attend monthly meetings.

This is a golden opportunity as well for all those who coutinually knock the way that things are done. I'm looking forward to seeing some of those names on the ballot paper as well......

See you at the Ballot Box!

Annual General Election

ANNUAL ELECTION

By order of the Federal Court on Firday 21st April 1995, permission was given for the holding of an Annual General Meeting and Election of a new Council for the Wireless Institute of Australia New South Wales Division. Peter O'Connell VK2EMU was appointed as Returning Officer.

At the meeting of the Council of the Wireless Institute of Australia New South Wales Division, on Friday 21st April 1995, the date for the Annual General Meeting was set as Saturday 1st July 1995 as per the order of the court.

Nominations for the election to council are now open.

Nomination forms can be obtained by writing to or calling the Parramatta office.

In accordance with 48c of the Articles and Memorandum of Association, nominations for council will close on Saturday 20th May 1995. The Divisional Office will be open from 12:00 noon until 2:00pm on that day.

Candidate resumes will be forwarded to the members with the ballot papers. Candidates are required to submit resumes by the close of nominations as follows.

1. The resume will be limited to 250 words.
2. The resume is to be forwarded to the Divisional Office by the close of nominations (Saturday 20th May 1995).
3. The resume should be in the form of :-
a. A printed copy, and,
b. On a 3.5" or 5.25" IBM formatted disk in standard ASCII text format.

Peter O'Connell VK2EMU
Returning Officer
Wireless Institute of Australia New South Wales Division
22nd April 1995

Ordinary and Associate Members

Ordinary members and Associate members

There are two classes of members of the Wireless Institute of Australia New South Division - Ordinary members and Associate members as defined in 4a and 4b of the Articles amd Memorandum of Association.

Ordinary members are those who presently hold an Amateur Radio Certificate of Proficiency. Ordinary members are eligible to stand for election to council, vote in the council ballot and at the Annual General Meeting.

Associate members are those members who do not hold an Amateur Radio Certificate of Proficiency. Associate members are not eligible to stand for election to council, vote in the council ballot or at the Annual General Meeting.

Some members, who joined the Institute without forwarding information about their Amateur Radio Certificate of Proficiency or who have since gained their Certificate of Proficiency may still be listed as an Associate member. Others may have upgraded and changed their callsign without informing the Institute.

In order to avoid confusion at the forthcoming election and Annual General Meeting, if you have some doubt as to your membership status, callsign or address, then please write a short note to the Secretary, or call, so that the records can be updated if necessary.

Peter O'Connell
Returning Officer
Wireless Institute of Australia New South Wales Division
22nd April 1995

Morse keys wanted

Wanted

The WIA (NSW Division) Education Service is asking for donations of Morse keys.

If you are able to assist please contact Peter Kloppenburg VK2CPK at head office (02) 689 2417.

Thanks

Book of the week

BOOK OF THE WEEK

This week begins a new feature on the VK2WI broadcast, where we review the highlights of books available at the Divisional Office.

With the sunspots low, propagation in the doldrums, and winter coming on, now is a good time to look at upgrading your Amateur Radio library.

This week, we take a look at the ARRL Antenna Book. Now in its 17th edition, the ARRL Antenna Book has been a favourite with Amateurs since it was first published in September 1939.

This book covers all aspects of antennas, including:

- Antenna Fundamentals
- Earthing Systems
- Yagi, Quad, Log Periodic and Loop Antennas
- Broadband Antennas and Multi-element Arrays
- Portable, Mobile, and Maritime Antennas
- Antennas for Limited Space
- VHF and UHF Antennas
- Repeater Antenna Systems
- Direction Finding Antennas
- Antennas for Space Communications
- Transmission Lines
- Antenna Measurements
- Radio Propagation
- Safety Considerations

For the first time, the ARRL Antenna Book comes with a 1.44 MB floppy disk of antenna design and analysis software, suitable for use with IBM-PC type computers. The software includes:

- Yagi Analyzer by Brian K6STI, with more than 80 optimised Yagi designs,

- a propagation prediction program by Jake W1FM as used by QST magazine,

- transmission line analysis software and programs for designing tapered antenna elements and gamma matches.

For more details about the book, please contact the Divisional office.

--Richard VK2SKY (who liked the book so much he's buying a copy for himself!)

VK2 WICEN News

WICEN News

All WICEN members should have received their April newsletter by now (and please let us know if you have not); it contains administrative paperwork of interest to all members. WICEN has been donated a quantity of transceivers suitable for conversion to

the 6m band; please indicate your interest in this equipment on the supplied form. Members interested in attending the Goulburn Conference are advised to complete the included form and return it to Morton VK2DEX NO LATER THAN FRIDAY; it promises to be interesting, with representatives from various emergency services and Federal WIA, and possibly the SMA. Nominations for the position of Deputy State Co-ordinator are now in order, as are nominations for the Management Committee; these nominations must be received by the State Secretary by Friday. Users of the BBS (which is in the process of moving) are invited to complete a survey; and finally there is a renewal form, which unfinancial members must return by 30th June if they wish to remain a member.

The Hunter Anzac March, commanded by John VK2JRC is of course on Tuesday, and the Oberon Car Rally is on Saturday, with about 20 people required; please contact Alan VK2YYJ via packet radio at VK2CZR, or at work on (02) 839-1388.

May is looking very busy; next month, there is the Hawkesbury Bridge to Bridge Speedboat Race on 7th May, for which David VK2KLX is looking for volunteers; the annual Goulburn Training Seminar is on the weekend of 13-14th May (again, applications must be in NO LATER THAN FRIDAY), along with the Rathmines Fun Run co-ordinated by Steve VK2KBL; the Wyong Car Rally is on the weekend of 20th-21st May, co-ordinated by David VK2UDT and Andy VK2XRX; and the Variety Club of Australia Newcastle Bash is on 23rd-26th May, with Maurie VK2CD in charge. Finally, the closing date for the Annual Reports is 31st May.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

News briefs

NEWS BRIEFS

The Northern Australia Development Council (NADC) will host a communications technology conference in Cairns, from 19-21 July. One particular area of interest will be communications problems faced by those living in isolated areas of northern Australia.

The conference will feature the best applications of communicat-ions technology in the areas of business, education, government, and community services.

The organisers hope to hear from delegates who wish to access communications services not currently available to them, such as mobile phones, AM and FM commercial radio stations, HF radio, cable and satellite TV, video conferencing, remote-area computer links, and "interactive multimedia".

Amateurs or shortwave listeners wishing to find out more about the conferencem, or perhaps contribute ideas and suggestions for the conference, can contact Fiona Anderson, by phone (070) 52-3990, by fax on (070) 31-1005, or by writing to NADC, PO Box 2358, Cairns 4870.

****

American aircraft manufacturer Boeing is to team up with a Norwegian shipbuilder, and Russian and Ukrainian space companies, to develop a sea-based satellite launching system.

"Sea Launch", as it is called, will be built on a modified North Sea oil-drilling ship, which will allow satellite launches from better locations than are currently offered by land-based launch sites. The companies aim to compete mainly with Arianespace, which launches satellites from Kourou in French Guiana.

****

BARCODE NABS BURGLAR

Radio station KNOW in St. Paul, Minnesota, recently reported a burglary at a St. Cloud jewelry store. The thief had first broken into an adjacent florist shop and used a pickaxe to break through the wall, thus bypassing the jeweller's security system.

While the burglar left no fingerprints in the store, he did leave behind a vital clue: the pickaxe, which still had the barcode label attached. Police traced the pickaxe to a local hardware store, where the barcode revealed that the pickaxe had been sold the day before the burglary. By matching the time of sale as recorded in the register's database to the time stamp on the store's video-surveillance tapes a clear picture of the suspected burglar was obtained.

News Briefs gathers communications and technology news from Australian media and other sources worldwide. Thanks this week go to The Australian, and the Internet comp.risks forum. If you have an interesting news item, please send it to the Divisional Office.

Voluntary comms emergency

VOLUNTARY COMMUNICATIONS EMERGENCY DECLARED

Following the bomb attack this week in Oklahoma City in the
United States, all Amateurs have been requested to recognize
the existence of a voluntary communications emergency, issued
by the Engineer in Charge of the FCC Field Office in Dallas.
Amateurs are therefore asked to keep frequencies between 3897
and 3903 kHz, and between 3922 and 3928 kHz, and between 7243.5
and 7249.5 kHz, clear for the handling of emergency traffic.

According to N5NAV, a District Emergency Coordinator in South
Texas, Health and Welfare traffic nets have been established
on the following frequencies: 7273 and 7290 kHz during US daytime,
and 3873 and 3935 kHz in the evening.

14 APRIL - 20 APRIL

DATE OF ISSUE: 21 APRIL 1995

INDICES:

DATE 14 15 16 17 18 19 20
10CM 88 91 89 89 90 92 86
A 5 3 4 6 6 9 (10 ESTIMATED)
T 23 28 28 39 38 45 40

SOLAR ACTIVITY WAS VERY LOW ALL WEEK.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET 14TH TO 17TH APRIL, AND QUIET TO UNSETTLED 18TH TO 20TH.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE NEAR TO SLIGHTLY ABOVE PREDICTED MONTHLY VALUES 14TH TO 16TH, AND 18TH APRIL, AND 10 TO 30 PER CENT ABOVE FOR THE REMAINDER OF THE WEEK.

FORECAST (21 APRIL - 27 APRIL)

SOLAR: VERY LOW TO LOW.

GEOMAGNETIC: UNSETTLED TO ACTIVE 22 TO 25 APRIL, WITH POSSIBLE MINOR STORM PERIODS ON 22 APRIL, QUIET TO UNSETTLED OTHERWISE.

IONOSPHERIC: DEGRADED HF COMMS ON 23 TO 26, NEAR NORMAL OTHERWISE.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Thanks from Urunga committee

The Urunga Radio Convention Committee would like to thank the people who helped organise and present the Urunga Radio convention last weekend.

Representatives from WICEN did a magnificent job.

The NSW Division of the WIA provided books for sale and Tim Mills provided the transport.

Many people brought goods to fill the trading tables and provided displays.

Finally, the convention committee would like to thank the people who organise and present the Sunday Broadcast for transmitting our announcements.

The results of the weekend's activities will be sent to a later broadcast.

de Merv, VK2DMS

Club news: Blue Mountains

The Blue Mountains Amateur Radio Club is holding its Annual General Meeting on Friday the 5th of May 1995. We have no guest speaker as the most of the night will be taken up by the election of office bearers.

As always, visitors are welcome but only financial members can vote. The usual refreshments will be served.

The meeting commences at 8pm, at Springwood High School corner of Grose Road and Chapman Parade Faulconbridge.

Alex VK2ICL
Publicity Officer

Club news: St George

From the St George Amateur Radio Society

The Annual General Meeting of the Society will be held at the usual venue, that is in the 1st Allawah Scout Hall, corner of Bellevue Pde. and Blakesley Rd., South Hurstville at 7.30 pm on Wednesday evening the 3rd of May, 1995.

All club members are earnestly requested to attend this very inportant function, where they will have the opportunity to thank the outgoing officers for their service to the Society during the year and also to show their confidence and high regard for the incoming office bearers by participating in their nomination and selection for the ensuing twelve months.

Visitors are always welcome to club meetings; coffee, tea and biscuits are provided and the members look forward to meeting those interested in attending.

The St George Amateur Radio Society's Computer Group will hold its next monthly meeting on Wednesday the 26th of this month of April at the usual venue, which is at the premises of RCS Radio Pty Ltd, located at 651 Forest Rd., Bexley, starting at 7-30pm.

Society members and other interested amateurs are cordially invited to these meetings, normally held on the fourth Wednesday of each month, so that they may share their knowledge and interest in this fascinating adjunct to our hobby.

For any further information please contact Paul VK2UPB, Computer Group Leader on 018-404-162.

from Allan VK2XF Publicity Officer

Club news: A.A.T.C.

Australian Amateur television Club

The next meeting of the A.A.T.C. Inc may be on as usual the 2nd Sunday of the month - May 14th or moved to the 21st - subject to future confirmation - stay tuned. And as usual to be held at Radio House in Wigram St - Parramatta - 1.00 pm.

Technical items prior to the meeting will be a mini talk of the new club power supply by VK2XOF and the TTL monitor new board by VK2MK as well as the latest boards for the twisted pair television transmission over a wisted pair up to 1000'.

Anyone interested in ATV is welcome to attend for general information and the general technical information.

For more information about ATV - contact Bob the Publicity Officer on (02) 587-3491 between 4.00 pm and 10.00 pm Monday to Fridays.

Attention all AATC committee members - a committee meeting will be on Monday night the 24th of April at RCS Bexley - Bob's place.

AATC Inc. Publicity Officer Bob Barnes

The 80m band in IARU Region 1 extends from 3.500-3.800 MHz. Therefore, the frequency you mention above (3.795MHz) is outside of the band in IARU Region 1. I am assuming that since Region 1 covers Europe, that Ireland would be in that Region, so 3.795 is NOT an amateur band.

> Do other contries have the same restrictions that US hams do
> concerning "broadcasting" in the ham bands?

The UK certainly does - you need a "special" callsign to do it (with a GB prefix in the UK).

Judging by K1MAN, the US doesn't seem to have many restrictions on "broadcasting", though! I have been thrown off a frequency on 20m because he started an AUTOMATED BROADCAST. This is NOT acceptable, in my view! (The fact that I was trying to work an XU at the time didn't help!)

>checked?" mentality instead of a "charge ahead, times a-wasting" one.

As with everything in engineering, there are those who truly work to
understand something and those just trying to get by. It doesn't matter
if you require slide-rules or other equally archaic ways of
getting work done, you're still working with the some group
of students. The ones interested in being a good engineer, the
ones who know that xxx is an important subject matter and should be
understood, will do well irregardless. The jokers who don't have
any business trying to get a EE degree are going float through
courses in a daze anyway. The ones in the middle of the road
aren't going to benefit in the long run by tricks that teach
them specific skills but fail to correct the underlying problems
in that individual's work ethic and lack of initiative to just
plain sit down with whatever the subject is and study it until
they've got it.

Yep, my father likes to talk of the good/bad old days of the slide rule, and
all the stories that go with them, but he never seriously suggests
that anyone should be using them instead of a calculator.
Yes, I agree that calculators encourage those jokers "just after the
answer" to punch numbers in and get numbers out, accepting them as
gospel, but the problem with that is the guy punching the keys,
not the fact that he's not got a slide rule instead. These guys
are either going to straighten up and fly right anyway, or
get a job and then loose it rather quickly as their boss realizes
they don't know a DC ground from an AC ground.

I personally have felt that the engineering classes I've
had that did not allow calculators at all in tests did the
best job of testing the students on the material. It's the
only good way to prevent students from bring in HP calculators
loaded with all the equations and answers from all the test
for the last decade, and at the same time you find out who can
manipulate scientific notation, basic math, algebra,
trig identities, 3 phase power equations, etc. with just paper
and a pencil.

Anyway, two cents from a graduating senior in EE at NCSU.

(FYI, my senior design project was to design, test, and write
basic software for a 68000-based repeater controller -- it's
been loads of fun.)

Is that same #*(*$&!@ detour that they had about 3 or 4 years ago at
the same time of the year? They send you on some back roads that parallel
I-70 for a while. I remember following some guy in a Jeep over a
rickety wooden bridge and ending up back on I-70 with no cars in
front of me or in back of me for miles. What is a good route around this
detour?

>Is it traditional to operate through satellites?

Well put.

>>Governmental permission to transmit on these frequencies does not
>>automatically produce competent operators.
>>Jack WB3U

But it does produce an accountable operator. What is a "competent" operator? I know plenty of people that I consider to be competent radio operators (they may not be hams) even though they are not radio "technicians" Very effective with a mic but dangerous with a screwdriver. But what is so wrong about that?

First, my identity is always on the message header. Second I buy a lot of American made products. Both cars are American (one Jeep and one Eagle). My ham station is virtually all American made, not just some American name attached to an Asian produced product. I have a Paragon

II from Ten-Tec, an Ameritron amp, an MFJ tuner, Timewave DSP, Index all band QRP rig, an Astron Power supplies. All are made in U.S.A. because I am actively trying to support this economy and U.S. ham manufacturers in general. I don't just talk the talk, I walk the walk.

My distain for the quality of RS products is the result of working for them for over five years and watching as the quality of the products went down...drastically!

If you think buying foreign made junk at RS helps our economy, think again.

Regards,

Duffy

Ten-Tec is known as having the finest ham equipment and finest equipment in the world. I have never heard a bad word about Ten-Tec from any owner. The stuff last forever. The Tec Tec transceiver have the sharpest receivers and have far less noise than any Japanese rig I have ever owned.

I still will buy U.S. before Japan and Japan before Korean made stuff. Let me take that back, I won't buy Korean made, low quality stuff. As for Ten-Tec being the only U.S. ham radio manufacturer. Try again. There is also Atlas, Index and MFJ.

HRO does charge more than others. Even after I pointed out this fact to the person at HRO that I purchased from, he was not willing to take much off my next purchase. HRO, while offering free shipping, does charge a 15% restocking fee unless it's their error.

A good guy to call is Ross Distributing out of Preston, Idaho. He has pretty good prices. You can reach them at 208-852-0830. Open Mon 9am-2pm and Tues-Fri 9am-8pm MT. No catalog, I believe.

Another good one is Radio Central, I believe. I do not know their phone number. But it's an 800 #. Radio Central has no catalog either but has very competitive prices, although most are slightly more than Ross Distributing.

I'd also suggest looking at any other microprocessor-controlled equipment which may be in proximity to the network, particularly any "vintage" gear from the '70s & early '80s. Also take a look at how the network cabling is routed in relation to power and other signal cables - part of your problem may be due to cable coupling.

Have you done any eye pattern measurements on the network signals yet? You might consider doing some, if you can. It may help you to isolate the problem.

>units and CONdos as well as QRP fans (even though I run about 30W ... :).

I'm undecided as to how I'd vote for the proposed group, but the above suggestion is an entirely different topic. I live in an apartment, and have done so for virtually all of my time as a ham (the other time was in a duplex with a small yard, so it still sort of applies). I haven't run much QRP. In fact, the closest I ever really came to QRP was when I was using a loaner HF rig w/ my 4.5 Amp power supply---I had to limit the transmit power to < 10 watts to avoid going beyond the power supply's limits. Even the 30m xcvr I built once ran about 15 watts....

In my current apartment, I have full-sized dipoles folded along the (wood) stairs (like many buildings along the coast, and particularly here on the island, this apartment building is built on stilts to help protect it from storm surge in a hurricane/himicane). When I run voice (rare) or cw, I run a full 100 watts. When I run AMTOR/PacTOR, my HF rig automatically cuts the power down to about 50 watts due to the high duty cycle.

Do I have RFI problems? Nope. I did, briefly, when a neighbor had a quick-disconnect cable between his TV and VCR, but that took a few seconds to fix, and has never re-appeared.

If anything, though, I think a QRP group would be more fitting than a sub-group for restricted space antennas, which, IMHO, is probably ok right here.

Just my $0.02, all IMHO, of course.

Later,

I drilled a hole in the firewall back behind the parking brake. I would
suggest you drill the hole large enough for the power cable AND a grommet
to protect the cable from wearing and causing a fire or worse. You might
make sure that both power lines are fused. There has been some discussion
on this, but my suggestion is.... If BOTH are not fused... DO IT!

1619. TH-79: Powering externally?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-25 00:00:00 UTC
From: dxk10@po.CWRU.Edu
Message-ID: <3njn67$ogp@usenet.INS.CWRU.Edu>
Source record: 247745
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Netters:

I received a 79 for my birthday (my wife is an Advanced licensee who understands these things)--great rig, nice improvement over my old 77. The external power circuit is different, though, and I'm curious if everyone else's take on it is the same as mine.

The 77 disconnects the battery when external power is applied. Drop in charging and external powering can work simultaneously, or the battery can be removed altogether and charged with the wall transformer charger.

The 79 charges the battery through the external DC jack. Looks like that jack provides 100 mA regulated for battery charging, so that shouldn't be left connected indefinitely to a 600 mAh battery. Does that mean the 79 can't be left plugged in for external powering? Can't leave it in place for packet, etc? Or run it at high power plugged in if the battery is nearly dead?

Let me know..

Why is this necessary? When you're posting to rec.radio.amateur.policy,
it seems there is an implied "flame mode on". ;-)

>ORACLE has no basis, in my opinion, for seeking to overturn the code
>requirement in the securment of General+ licenses. The code serves a
>very important purpose, in providing communications where other modes
>such as SSB may not be possible. Do not fall into the group that thinks
>that if you do not have to master morse code that the entire spectrum
>below 30 MHz is your personal playground.

Well, ORACLE has as much basis as any other group of amateurs to
work for change. It is possible you don't agree with their basis,
or even that you don't accept their basis, but they certainly have a
right to work for change.

As for "code serving an important purpose where other modes such as
SSB may not be possible"; be careful! Modern HF modem design is
making strides, and actually seeing G-TOR or PACTOR II transfer
error free data with no signal audible above the noise level casts
a very strong shadow on the validity of the "code gets through"
argument. In the first place, if code gets through, then we don't
have to require it; enlightened people will use the superior mode
when they need to regardless of legal sanctions.

Often, when the superiority of the automated digital modes, such as
PACTOR II and G-TOR is mentioned, code proponents will then say
"Oh, but those modes require a computer and an expensive modem
and Morse code just requires a human ear and a key". In doing so,
the argument has changed from "Morse code gets through" to "Morse
code costs less". When did the amateur regs start requiring everyone
to learn some mode just because it is generally cheaper?

Certainly, simplicity is a virtue, and elightened amateurs will use
code when simplicity is of value. Again, this is regardless of
legal sanctions.

>I believe that a possible soultion would to be create a sub-catagory
>that would fill a gap between the No-Code Tech and the code required
>for the General. This new catagory would allow partial use of the
>spectrum used by the others.. similar to the Novice allocations within

>the rest of spectrum.

Is this a NIMBY approach to evolution? We already have enough
license levels; if simplicity is a virtue with respect to
modulation method (see above), why isn't simplicity also a
virtue with respect to licensing?

>Again , this is my personal feeling about this silly battle that ORACLE
>is fighting.. seeking absolute banishment of CW. There is a middle
>ground that be created if both sides will come together and simply
>talk.

I do not believe ORACLE is attempting to banish CW, rather they are
attempting to banish the requirement. There is a difference;
banishing the requirement still allows the choice of modes.

>If you share my viewpoints and find this of value, make a copy and send
>it off to those in position who can voice these ideas and introduce
>them to the big picture.

I hope, Bryan, in the interest of spirited discussion and valid,
fair change, that you would equally encourage those with differing
views to make them heard by those with "voices".

(By the way, notes regarding the code issue are appropriate to
rec.radio.amateur.policy; please direct follow-ups there)

I am not an antenna guru, but I do know that a wattmeter is usually set to give accurate meter readings ONLY into a 50 ohm load, resistive. If you put the wattmeter into some silly antenna that has wild reactance, it may read a KW from a 50 watt transmitter. Use a dummy load and you will get the actual watts out. Use the SWR meter to get the ratio of forward vs reflected in your case, and you probably will find a 10:1, and you should investigate the antenna for problems. If it was designed to be resonant, and it is that far off, there would seem to be a problem. (Using an antenna in the attic, by itself, might cause some reflected power, I just don't expect it to be horribly far off, so it deserves checking.)

Good luck.

From: plpath@pop.ucr.edu
Message-ID: <3nj97t$djl@galaxy.ucr.edu>
Source record: 247749

As we all witnessed during last week's tragedy the local emergency agencies in Oklahoma requested that cellular phone owners NOT use their phones as the frequencies were in use and
needed by the emergency crews at the site. HT's do not operate in this band and thus were an
additional source of communication not an interference.
We both face the same potential problem of "repeaters" being damaged during a disaster of some kind or other; however, can cellular users communication to each other via "simplex" and
thus perhaps relay messages? Can cellular phones be used by themselves to reach another repeater out of the area (i.e., CONDOR)?
End of discussion.

Gerald Schmitt (ggs@aerie.lanl.gov) wrote:

: You know Dan quoting out of context to prove your
: point is kind of like lying. Your diatribe just proves
: you never read the entire thread or even an entire message.
: Or you have no respect for the truth.

Nothing like a nice ad hominem attack... I really don't think I quoted you out of context, and your characterization of my message as a "diatribe" is simply inaccurate. The general feel of this thread has been "RS stuff is just Korean-made junk," one implication of which (in the way it was written) was that any Korean-made electronics were crap.

: I never said the Radio Shack radios were crap or anything

"Radio Shack makes another mediocre radio. Oh joy." This is pretty close to what you wrote, right? I don't recall now whether you explicitly said it was crap, but that seemed like the general tone of your message. If I misunderstood that, I apologize.

: like that. I have said that the 202/404 series were behind
: the times technically.

That, of course, depends on what criteria you're using. If you base your judgment on how many memories it has, or how wide of bandwidth it receives, or how compact it is, then it falls behind, say, the Yaesu FT-11r or the Kenwood TH-22. If your criteria are RF performance and value for the dollar, it starts looking a lot better.

: I don't think they are
: perfect or there would not be so many posts "What does Er2
: mean".

Of course they aren't perfect, but they're pretty good. I only recall one or two posts asking about Er2; the others were responses. I also recall seeing messages about problems with FT-530s, TH-78s, and other radios.

: What started this entire thread was some one posting that
: the HTX-212 was "designed by the hams at Radio Shack and
: built by Motorola".

Yeah, I saw that. Yes, it seemed silly. What I was objecting to were the "just another piece of Korean-made junk" / "just another piece of Radio Shack junk" messages following that post.

: The radio is made by Maxon in Korea.

Agreed.

: I'm sure some highly enlightened individual has opened
: one up and found Motorola on a device ergo "made by Motorola".

Could be, who knows?

: If trying to get the truth out makes me a jerk then so be it.

Getting to the truth isn't it; it's the other comments ("another
mediocre radio, oh joy") that do it.

1628. Re Kenwood TH-22AT mods

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-25 00:00:00 UTC
From: parkerbk@sd2.af.mil
Message-ID: <3njt1h$858@blackbird.afit.af.mil>
Source record: 247754

I think it was steve who asked for the CAP and MARS MODS

Here you go:

This Mod is TH-22AT Beyond Mars Modification Dated November 12, 1993
from Kenwood.

1. Turn off the power.
2. Remove the batery pack.
3. Remove the two long screws from the rear or the case.
4. Remove the two knobs from the top of the unit.
5. Remove the rubber top panel.
6. Squeeze the bottom of the front panel togather an GENTLY
separate the two case halfs. Use caution so that you do
not damage the thin ribbon cable connecting the front panel
to the main unit.
7. Remove diode D208. Located on the circuit board behind the
front panel. See ascii artwork below.
8. Place the diode you just removed (D208) in the location shown
for D212 and solder in place. Observe proper polarity. The
diode should face the same direction as diode D210 and D211.
9. Reverse steps 1-6 to reasemble.
10. Reset the microprocessor.

```
|
|
| --- [D206] [D210]
| |C| [D207] [D211]
| |N| [D208] {D212}
| |2| [D209] {D213}
| |0|
| |3|
| --- ____|-----|
| | | |
| | SP | MIC |
| | | |
----------^-----^--------
```

This modification requires soldering equipment rated for CMOS type circuits. It also
requires familiarity with surface mount soldering techniques.

Hope this helps .... If anyone has any other Mods for this radio
I would sure like to see them.

C'ya
Keith Parker

The best you can do is to re-think your set-up.
If you use your HT mobile with an external antenna, the RX is
likely to cause trouble, and a 50 W amp + an inefficient
through glass ant is not a good idea either.

Far better would be to sell the HT, bye a decent s/h mobile
radio and a proper roof mounted antenna. Here good s/h mobile
radios sell sometimes for the price of a new HT.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna

I purchased a 4 band shortened dipole the other day, installed
it in my attic (it's ~40 feet long), and started using it. I noticed
I needed to use the tuner on most all the bands even though
the antenna was cut for these bands (specificly 40 meters).
I decided to check the SWR using a Bird watt meter. To my supprise
my Kenwood 850S/AT was putting out about 250 watts forward and about
150 watts reflected power!!! Well, the 850 only puts-out ~100 watts.
What would cause readings like this? I first thought I had a falty
watt meter so I used another with the same results. If you do the
calculations the SWR comes out to be something like 10:1 (this was
just what I remember from one of my readings). I don't think this
is correct because my Kenwood tuner (builtin) could not handle
this high SWR. This may be a common problem, but being a new HF ham
I'm stumped! Can anyone help?

Thanks

Leonard J Popyack, Jr. (popyackl@ers.rl.af.mil) wrote:
: Has anyone noticed how cheap and disgusting qst has become. First it was
: a move to cheaper paper (close to tissue paper). Next, came six pages

Cheap paper? That hasn't been my impression. They're still
using a coated glossy paper, as opposed to the newsprint that's being
used in some magazines. The overall impression I get is one of a fairly
high-budget production.

: of ads up front in qst (now it is 8 or 12 pages). Then to really make it

Ads aren't a bad thing, are they? Like the photo magazines, many
people probably read QST, at least partially, for the ads.

: ratty, they plaster all sort of crap on the cover simimlar to supermarket

Features listed on the cover is common for any magazine,
including those professional journals you seem to love.

: tabloids. Finally, to really jam it up the members ass, they eliminate
: the plastic wrapper and stick the label right to the front of the magazine.

The plastic wrapper was a pain in the ass, and a waste of money.
It also, if you care about such things, wasn't particularly good for the
environment.

: Sometime change is good, but NOT in this case!!! It sucks. QST nolonger
: looks like a professional Journal. It now looks like an amateur journal

QST _isn't_ a professional journal (which also, BTW, list their
features on the front cover, and usually aren't mailed in plastic
wrappers). Those same professional journals alse have been known to
use cheap paper, have _loads_ of ads in them (check out Corrections
Today for examples), are mailed without plastic wrappers, etc. It's an
amateur radio magazine.

Good things about QST: The cover is of reasonably heavy stock,
nice coated paper, and good ink, so it doesn't come off on your fingers
like CQ. It's perfect bound, so it will stay together longer than
magazines which are staple bound (like CQ).

ARRL Bulletin 44 ARLB044
From ARRL Headquarters
Newington CT April 25, 1995
To all radio amateurs

SB QST ARL ARLB044
ARLB044 New band available

New band available

On April 26, 1995, amateurs will gain secondary status access to 219
to 220 MHz. Amateur operation is limited to forwarding stations in
point-to-point fixed digital message forwarding systems--including
intercity packet backbone networks--only.

All amateur stations are required to notify ARRL (in its
FCC-designated role as contact point) at least 30 days before
operating in this band, and amateur stations within 80 km of an
Automated Maritime Telecommunications Systems coast station must
obtain written permission from the AMTS licensee before operating.

Amateur stations between 80 km and 640 km of an AMTS coast station
must notify the AMTS licensee.

A Form 219A kit, available from ARRL Headquarters, includes a cover
letter of explanation, a Form 219A for the required notification to
ARRL (one is required for each transmitter planned), and a copy of
the 219 to 220 MHz band plan.

May 1993 QST (page 9) and May 1995 QST (pages 9 and 93) have more
information.

You're absolutely right, comparing other radio services that are evolving
with our rapidly antiquated service would be a dishonor to those other
services. But perhaps they'll still be around long after the FCC decides
that we've abandoned the purposes they set out for our service in 97.1.

>I recently purchased a 2m HT which I use mostly while driving.
>I'd like to purchase a mobile unit but but I can't afford it.
>I'm thinking of buying a linear amp (50W or so) and buying a better
>external antenna to enhance the usability of my HT.

Many of today's HTs will suffer severe intermod when hooked to outside antennas and driven near strong RF areas, such as many downtown areas. As you've probably already discovered, the audio output of many HTs is insufficient to deal comfortably with the auto environmnet. And hooking an HT into the car's electrical system, and to an external antenna, tends to make for a messy and awkward installation. Constantly connecting and disconnecting the cables to the radio will quickly wear out the connectors.

For all those reasons, using a HT as a mobile rig isn't a good idea. However, people persist in the attempt, and there have been some clever solutions to some of the problems. One of the cleverest ideas in the amateur market, done earlier in the commercial market by GE, was the VoComm Power Pocket. Looking something like a deep drop in desk charger, it contained a connection for external power for the radio, an RF amplifier, and an audio amplifier. There were still cables to be plugged and unplugged each time, but it made a cleaner installation.

GE did it better, since they only had to support their radios. The connections to the radio were sliding contacts that mated with contact areas on the radio. No connectors to fool with, or to go bad, were involved. The unit also had it's own external microphone and speaker. This worked pretty well with a GE HT because they had very good filtering in their front ends, and intermod generally wasn't a problem when using an external antenna. The VoComm was not so successful. It did nothing to solve the intermod problem, or the connector wear problem.

>I'm new to amateur radio and the variety of equipment makes and models
>is overwhelming. I don't want to spend a lot (under $175 for both the
>amp and the antenna). Anyone have any suggestions for equipment
>within that price range? Any brands to avoid?

Ok, now that some of the issues are out on the table, lets see what's available. To deal with intermod, you need a tight helical filter in the amplifier for use during receive. Radio Shack has a 30 watt amplifier that meets the bill, and Tucker sells just the filter. Unfortunately, most of the amplifier producers have seen fit to include a preamp rather than a filter in their products, and this just makes things worse. A HT

is already too sensitive to its RF environment since it normally has to have enough gain to overcome its rubber dummy load. You can fit an external filter, but one good enough to control intermod generally has too much insertion loss to be in line during transmit. That's where the Tucker filter shines. It is RF switched so that it is inline during receive, but out of line during transmit.

>Also: what's the conventional wisdom on thru-glass mount antennas?
>I have an Explorer with heavily tinted windows. I assume metallic
>compounds were used to tint the glass. Will tinted glass affect the
>gain of thru-glass antennas?

Argh! On-glass antennas are a poor compromise at best, and metallic tinting will very adversely affect their operation. The best external antennas are Larsen or Comet antennas, mounted with an NMO mount through a *hole* drilled in the center of the top of the vehicle. On-glass antennas work by capacitive coupling through the glass. That can work fairly well in the upper UHF region, but there is generally too little capacitive coupling for it to work well at VHF. You'll find that the coax in the cabin will be the primary radiator. In many cases, you can completely remove the outside whip portion without noticable changes in performance. When you add an amplifier, all that RF floating around the cabin will cause problems with the vehicle systems, and present a possible health hazard as well. Use a proper antenna, correctly installed with an NMO mount. You won't regret it.

All in all, you'll be much better off just buying a good used 2 meter mobile rig rather than trying to kludge a HT, amp, filter, and makeshift antenna onto the vehicle. Good radios, like the IC-28H, are available on the used market for $175 or less.

>with a screwdriver. But what is so wrong about that?

While I agree generally with the thrust of your comments Curtis, I'd
like to address your last question with a quote I found last night
in the RSGB VHF UHF Manual.

'The 1979 World Administrative Radio Conference of the International
Telecommunications Union re-defined the amateur service as "A radio-
communications service for the purpose of self-training, intercommunication,
and technical investigation carried out by amateurs, that is, by duly
authorized persons interested in radio technique solely with a personal
aim and without pecuniary interest."'

This has always been part of the US charter, of course, but it doesn't
hurt to remind ourselves that we are a technical service intended for
lifelong self-training in radio communications systems and techniques.
We are not primarily a user service such as the cellular phone service or
the Citizen's Band service. Just operating a radio is a small facet
of the intent of the amateur service.

You seem to misunderstand the meaning of the word "Continuous", the first
letter of Continuous Tone Coded Squelch System or CTCSS. These repeaters
require proper tone to be sent continuously for the entire duration of each
transmission. Your idea would needlessly key up EVERY repeater for a very
short time without keeping any one system on line during your conversation.
This would certainly make the interference much worse than it is now, and
would make your rig quite unwelcome in most parts of the country.
Most amateurs who have a strong interest in VHF repeater operation invest
in a repeater directory. A good percentage of those folks learn how to
program their handhelds. Some even have enough money left over to buy
spelling and grammar check software for their home computers and enough
time to learn about the shift key.

Source record: 247778

The Ford Explorer has a nifty wiring duct running along the floor panel along passenger side door. In this duct, you'll find a heavy, yellow wire which is the power supply for the optional stereo amplifier which is normally mounted inside the right rear quarter panel.

I tapped directly into the yellow wire at a point near the rear of the front passenger seat and connected it to my TM-741 tri-bander. For the black lead, I chose a nearby body frame ground. It has served me well, with no problems whatsoever for well over two years. Of course, I don't play the stereo loud while I'm transmitting :-)

The aformentioned (yellow) line is non-switched and runs up to the main power bus. It is designed to supply some respectable current to a pair of optional audio amplifiers (JBL custom sound option :-).

Running a pair of separate heavy lines to the battery will buy you nothing except aggrivation and sore thumbs. The whole idea of running extra heavy 10 gauge wires up to the battery is, INMO, complete hooey. Gone are the days of 100 amp mobile rigs. You can expect no more than about 7 amps of drain on this line even at the highest transmitter power settings.

The only other thing which you will experience in an Explorer is that occasionally on 2M you'll notice that the rear wiper will self-actuate. This will be the case no mater how you attach the radio to the car or the battery. This is cured by placing a toroid on the power control lead of the wiper motor, in a procedure which was outlined in a recent QST hints and kinks article dealing explicitly with the Explorer.

DON'T spread this around. This will give some know-it-alls one less thing to razz innocent and well-intentioned newcomers about.

We've just about decided that both Radio Shack and cell-phones aren't perfect and this new subject would have carried a vocal minority of the the group for another week or two of bickering and name calling.

Telnet to: callsign.ualr.edu 2000

If you're not familiar with telnetting, be sure and ask your system help folks to show you how to telnet into a particular port (i.e. 2000) instead of just telneting into the site.

Checked out their new server for the first time, tonight, and I think they've got a winner! Not hard to use at all, and quite comprehensive!

|>technical topics, or building equipment, or handling traffic, or operating
|>in contests, or emergency preparedness, or etc. But how can I consider an
|>individual who isn't willing or motivated to learn *any* of these subjects
|>to be a ham? Does the presence of a (proposed) brain-dead license change
|>their status, or the value of their presence on the bands? It certainly won't
|>change my opinion of them as amateur radio ops!

Talk about a twisting around the opposing point of view! Please give *ONE* example of a post that suggests a "(proposed) brain-dead" license? If moving out of the 19th century and into the 21st century is being "brain-dead", then please count me in that category. This is the typical "the sky is falling" argument and holds no water at all.

|>>Luckily, new hams are also allowed to learn--and long-time hams, too.
|>
|>Yes, it's one of the best things about the hobby. Still, there's an
|>implication here that it's OK to give away the license now and trust
|>the operator to learn everything later. Good thing they don't do this
|>for doctors and engineers. I think they do it for lawyers, though. <g>

Enough with the "give away" license red herring, it's not being proposed and simply doesn't wash.

IMHO this is a much better idea then the current name. My feeling is
there is a much broader base of users for qrp, and it could include the
low profile people also, since they seldom run 1000 watts.

Flame mode ON:

ORACLE has no basis, in my opinion, for seeking to overturn the code requirement in the securment of General+ licenses. The code serves a very important purpose, in providing communications where other modes such as SSB may not be possible. Do not fall into the group that thinks that if you do not have to master morse code that the entire spectrum below 30 MHz is your personal playground.

I believe that a possible soultion would to be create a sub-catagory that would fill a gap between the No-Code Tech and the code required for the General. This new catagory would allow partial use of the spectrum used by the others.. similar to the Novice allocations within the rest of spectrum.

Again , this is my personal feeling about this silly battle that ORACLE is fighting.. seeking absolute banishment of CW. There is a middle ground that be created if both sides will come together and simply talk.

If you share my viewpoints and find this of value, make a copy and send it off to those in position who can voice these ideas and introduce them to the big picture.

BWAHAHAHAHAHAHAHAHAHA!
Pardon my amusement. It is exactly as difficult to listen to cellphone as it is to listen to 2 meters. Granted, scanners sold these days have the cellphone range blocked out, but the millions of scanners sold before that silly law receive them with the press of a couple of buttons. Old TV sets, with UHF channels up into the 80s, can also pick up cellphones. The cellphone salesdroid lied to you.

>What would cause readings like this?

Hi Eddie, it all adds up. The 850's 100 watts adds to the 150 watts
of reflected power to equal the 250 watts of forward power. The 850
is not "putting out about 250 watts forward". The antenna tuner is
re-reflecting the reflected power so 100+150=250.

>If you do the
>calculations the SWR comes out to be something like 10:1 (this was

>this high SWR.

Looks like it is handling the 10:1 SWR just fine. What maximum SWR is
it speced to handle? My SGC-230 "handles" SWRs in the thousands:1 (not
saying anything about efficiency).

I hope not. It looks rather awkward and too tiny for someone with average sized hands to use. It is rather amazing, though. I listen to quite a few people who talk on their DTMF mikes but somehow manage to hit a button. Think what it will be like for all those OTHER buttons!

Looks a little too crowded for my hands.

I'm seeing more and more testimonials such as the above, yet some folks continue to argue that today's exams are as difficult if not more so than in previous years. Face it, the exams are so watered down that sitting for one has become just a formality. One can only imagine the nightmare HF will become if the code requirement is eliminated.

1670. 2M beam problem

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-25 00:00:00 UTC
From: robert.brandon@camel.com
Message-ID: <8A81354.00CB003470.uuout@camel.com>
Source record: 247796

I'm reworking an older Cushcraft 2M beam. Just about everything around the feedline was corroded, so I bought new nuts and bolts at the hardware store. I also replaced the 29" coax matching stub (RG58) as it was a bit corroded too.

I'm almost certain I've wired it back up the way it was, but now I get a high SWR (4.5:1 and up).

I don't have the documents any more, can anyone help me out?

There are three connection points, which I'll call A,B, and C. A and C are the connection points for the two parts of the driven element. B is a bolt that goes through the boom in between A and C.

The center conductor of the feedline connects to A, and the braid to B. The braid of both ends of the coax loop goes to B. The center conductor of the coax loop goes to A and C. A u-shaped metal piece, a couple of inches on each side, goes between A and C and bolts to the boom in the center.

Does that make sense? I can't find anything quite like it in the ARRL Antenna Handbook. Have I mixed something up? Can I tune the antenna by adjusting the length of the coax? I have all the other elements taken off now. Would the SWR change dramatically if I put back on the other elements?

Thanks in advance for your help. (Email replies, please.)

1671. EOSS Colorado Springs Balloon Launch

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-25 00:00:00 UTC
From: rickvg@usa.net
Message-ID: <duRdlSEHGUBJ075yn@usa.net>
Source record: 247797

Dual Balloon Launch in Colorado Springs.

This Saturday EOSS and the United States Air Force Academy will each be launching a payload from the Parade Grounds at the Academy. Here are the flight profiles for each payload.

FLIGHT PROFILE FOR EOSS 22

LAUNCH DATE: April 29, 1995
LAUNCH SITE: Air Force Academy Parade Grounds
Launch coordinates:

39 deg 00.56 min N
104 deg 52.90 min W

LAUNCH TIME : 14:00 UTC
EXPECTED TRACK: Between 35 degrees and 145 degrees azimuth
FLIGHT EXPERIMENT: Atmospheric Sampling of Inversion Layer
SECONDARY EXPERIMENT: Ozone sampling throughout the flight.
PROJECT INTEGRATOR: University of Colorado at Colorado Springs, Jack Crabtree AA0P

Shuttle II FREQUENCIES:

Telemetry:
144.290 MHz FM (1 Watt output) - The Packet telemetry stream is in ax.25 format at 1200 baud and is readable in plain english for the most part. Included in each telemetry frame is an APRS position string (APRS users see note below). Every few minutes a CW ID is transmitted on this frequency.

Beacon:
147.520 MHz FM (250 milliWatt output) - Continuous CW ID

ATV:
439.250 MHz AM (1 Watt output) - NTSC video

10 Meter Beacon:
28.322 MHz USB (500 milliWatt output) - Continuous CW ID (this payload may or may not fly. It is tentative as of this writing)

Foxhunters:

Pikes Peak FM Association 448.450 MHz

HF Net:
7.235 MHz KA0DPC Sparky will handle the HF net.

PURPOSE OF THE FLIGHT:

Two experiments will be flown.

1.) A gas capture experiment to sample air below and above the thermal inversion that regularly resides above Colorado Springs. These samples will be obtained by using computer controlled, evacuated canisters. These canisters will be recovered and the gasses they capture will be analyzed for their constituents.

Should there be no inversion layer this late in the year, a distinct possibility, then the flight will serve as a test of the gas capture mechanism.

2.) Ozone will constantly be monitored throughout the flight. This information will be transmitted to the ground via telemetry channels in the EOSS "Shuttle II" where they will be captured on computer for later analysis.

---

notes:

Automatic Position Reporting System (APRS):

EOSS Shuttle controllers now beacon on the packet telemetry frequency with an APRS position string. If you are running APRS you should be able to graphically track the progress of the flight on the "CODENVER.MAP" map file. The Shuttle is not a TNC equipped packet station. It only reads data from various sensors and experiments and formats and transmits that data in AX.25. Therefore, beacons from other APRS stations will NOT be retransmitted (digi). So, in order to minimize possible interference with hams in your area, we request you turn off the position beacons in APRS. Thanks!

Who Can Hear It:

Almost all our transmitters are on VHF or above frequencies. Therefore, you need to be line of site to the payload to hear/see it. Since the payload rises to an altitude of over 90,000 feet on most missions, reception is usually possible for folks in most of Kansas, most of Nebraska, most of Wyoming, extreme south eastern Idaho, eastern Utah, north eastern Arizona, most of New Mexico, northern Texas, and western Oklahoma. DO NOT BE DISCOURAGED by the apparent low power of our signals. I usually monitor the Beacon with an HT from the ground station throughout the flight. The signal is strong even at 130 miles and I only lose it when the balloon descends below my horizon.

We have a 10 meter beacon under construction. This beacon should be flying with us from now on. Depending on conditions, this signal may be heard just about anywhere world wide. However, it's most likely to be heard one or two skips away limiting it's reception to the USA, Canada,

and Mexico. But, it can't hurt to try and copy it.

FLIGHT PROFILE FOR AIR FORCE ACADEMY TEST PAYLOAD

LAUNCH DATE: April 29, 1995
LAUNCH SITE: Air Force Academy Parade Grounds
Launch coordinates:

39 deg 00.56 min N
104 deg 52.90 min W

LAUNCH TIME : 12:00 UTC
EXPECTED TRACK: Between 35 degrees and 145 degrees azimuth (it will wander a bit)
FLIGHT EXPERIMENT: Satellite Test
PROJECT INTEGRATOR: United States Air Force Academy - Gil Moore

Shuttle I FREQUENCIES:

Telemetry:
144.340 MHz FM (1 Watt output) - The Packet telemetry stream is in ax.25 format at 1200 baud and is readable in plain english for the most part. Included in each telemetry frame is an APRS position string (APRS users see note below). Every few minutes a CW ID is transmitted on this frequency.

Cross Band Repeater:
446.000 MHz FM Input Frequency
147.555 MHz FM (250 milliWatt output) Output Frequency

ATV:
426.250 MHz AM (1 Watt output) -NTSC video

Foxhunters:

Pikes Peak FM Association 448.450 MHz

PURPOSE OF THE FLIGHT:

1.) The Air Force Academy is planning a Space Shuttle Get Away Special Experiment (GAS). GAS experiments are flown inside containers in the orbiter's payload bay and are activated once the Shuttle has reached orbit (or at a predetermined time during the flight).

The Academy's satellite measures approximately 18" on a side. It is equipped with solar panels and is outfitted with an attitude control system. This balloon flight will be a test of that attitude control system's ability to keep the satellite oriented on the sun using a solar sensor.

2.) EOSS will be flying a crossband repeater to assist the tracking and recovery teams. If the frequency is not being used for recovery efforts we

may invite remote stations to use the repeater under the direction of net control. However, tracking and recovery operations will take priority on the repeater.

notes:

This balloon will hover at 107,000 feet until the payload is commanded to cut down. The duration of the flight is undetermined at this time. However, it is hoped that the flight will remain within the borders of Colorado as our fox hunting teams will be quite busy recovering two payloads this day.

The Academy flight is entirely their work. They are offering EOSS payload space (we tie onto their support cable) in exchange for our recovery efforts.

Automatic Position Reporting System (APRS):

EOSS Shuttle controllers now beacon on the packet telemetry frequency with an APRS position string. If you are running APRS you should be able to graphically track the progress of the flight on the "CODENVER.MAP" map file. The Shuttle is not a TNC equipped packet station. It only reads data from various sensors and experiments and formats and transmits that data in AX.25. Therefore, beacons from other APRS stations will NOT be retransmitted (digi). So, in order to minimize possible interference with hams in your area, we request you turn off the position beacons in APRS. Thanks!

ATV:

The Amateur Video Signals from the payload may be picked up by a cable ready TV set on channel 58. However, you need to be very close to the balloon, and have a directional antenna to do this as cable receivers do not have much sensitivity (why should they?). If you don't have a cable ready set, try tuning DOWN from UHF channel 14. Some sets can receive the signal there too.

Who Can Hear It:

Almost all our transmitters are on VHF or above frequencies. Therefore, you need to be line of site to the payload to hear/see it. Since the payload rises to an altitude of over 90,000 feet on most missions, reception is usually possible for folks in most of Kansas, most of Nebraska, most of Wyoming, extreme south eastern Idaho, eastern Utah, north eastern Arizona, most of New Mexico, northern Texas, and western Oklahoma. DO NOT BE DISCOURAGED by the apparent low power of our signals. I usually monitor the Beacon with an HT from the ground station throughout the flight. The signal is strong even at 130 miles and I only lose it when the balloon descends below my horizon.

I guess you're now expected to buy the ARRL Microwave Experimenters
Handbook or the Microwave Projects Handbook if you want to get wise on
microwave.
I agree with you on the 40M QRP stuff...how many renditions of
regurgitated NE602 or MC3362 based receivers must we be subjected to ?
I'd sooner see articles of new technological advances on the still
unexplored UHF/Microwave bands and related hardware.

This is a very interseting post. I especially like the way several other
posters duplicated the article in total and added a single line like
"what does thins have to do with rec.arts.phlegbotomy?"

The answer is quite obvious "Coach" is the guy who convinced REM to play
underwater reggae wearing nothing but rollerblades and broadcast the
whole thing on the HAM radio network, meanwhile they outfitted several
canaries and cats with facemasks and tanks so they could chase each other
around underwater while the band plays for the MTV Buzz Bin clip. :)

Hello everybody,

since I was irritaded a few times about empty nicad's
in the middle of an qso, I decided to solder together
a pack of 3 lithium cells (3x3V) to power my C520 in
such a situation (or emergency).
The question I have is, whether Lithium batteries are
able to deliver such a high current (0.3-1A) that is
needed during transmission.
The size of Li-cell I used was a bit shorther and thicker
than an AA cell.

In responding to my post about your earlier use of the term "real hams," you switched to the using the term "competent operators" in the conceptual sense you had used "real hams" in before. *That* is what I meant by "shifting the target." I apologize for deepening your confusion.

here is an idea. all repeaters now are going pl as interference gets greater. the reapert directory works for getting that pl tone but not good enough and then you have to program it into your radio besides! well here how about when you key your mic it send a burst of all the tones! that way you never have to worry about the tone to use. this would be A Life saver. especially if you travel and dont know the repeaters! any thoughs maybe we could get the big name manufactures to do it. please post soem thoughs on it here.

Just who coined this awfully misguided term of bandwidth when people actually mean throughput? I realize that the fourier transform of a high frequency square wave produces a wider spectrum but for a given "bandwidth" the throughput can vary quite dramatically depending on data compression. Every time I see the term used it is in reference to throughput not bandwidth.

This is just a pet peve of mine that I thought my fellow hams might share! Too bad it is too late to set the world straight.

Maybe all repeaters where you are; but, not all repeaters are going PL. A burst of all tones? I believe you may need a bit of applicational experience with the use of PL (CTCSS) tones. This would just "ker-chunk" as the tone was sent. Generally, the repeater only repeat while one or more specific tone(s) are present; so, a burst would only burst repeat. (The first "C" in CTCSS is for Continous.) Besides many repeaters have users that use different tones. This "all tones" method would void them of the opportunity to have a "Private Line" and not be forced to listen all the other traffic.

I believe some newer model radios can do a "tone" search.

Generally, I don't support this idea - I believe there must be a better way. But, hey, it's a free society . . . don't let me dampen your creative thinking!

Here's my creative travel solution - I get a AAA Trip Tix (I think that's what it's called) and put the Repeaters from the ARRL Repeater Directory on the Trip Tix. A little effort, and I miss some, but it's worth it and you learn things like - many cities have a 146.94 repeater. (Maybe there was sale on the .94's paired xtals in the 1950's!)

Has anyone thought about, and has the programming applitude to, generate a HAM repeater "Trip Tix"? If enough lobby AAA could they option to include this info? (We'll pay - I'm sure.) It would be cool to have my method automated. One could give a computer some basic info like, 10M, 2M and 70 CM, I-70 West Bound between St. Louis and Denver, wide converage only; and, have the computer print a list of repeaters by city, central mile marker, or whatever.

|> fashion.

Actually, I know several people who use 50 cal. block-powder rifles for
hunting. With today's highly accurate, hi-power rifles, why would anyone
use black-powder? Gee, it must be obsolete... Unless, of course, you want
to hunt deer in RI.

With 38% of amateurs using CW of HF, I'd say that's pretty much still in
"fashion".

My good friend Jeff Herman can provide the correct statistics, in case
I don't recall them correctly.

|> Given that no other radio service requires the use of Morse Code makes
|> claiming it "in fashion" pretty far fetched. I suppose those other services
|> dropped their use of Morse Code for other less capable means.

The comparison of amateur radio to "other services" is pointless. I suppose
you could compare the amateur service to the FM commercial broadcast band
and say "Gee, they don't need CW... See!" Yeah, so what? The purpose and
intent of operation is different in each service, making "relevance" of
CW strictly "revelant" to the particular service in question.

: Governmental permission to transmit on these frequencies does not
: automatically produce competent operators.

But ham radio is about much more that tradition; it's also
about advancement. Historically ham radio has helped to push the
technological envelope.

I am a lowly tech. I do not know how to work someone in
the Australian outback on cw using my grandfather's Heathkit tube set.
But so what? That's been done already!!

So what can I possibly offer? I am a graduate student in physics.
I have a better that average understanding of the physics of radio and carrier
waves. I also have a growing understanding of modern digital communications.

I'm not trying to be vain here. I know I'm no Einstein, but I
still have a lot to offer to OUR hobby, and there are LOTS of young
techs like me. Had a code requirement remained, I would not have
gotten my license, and I would not bring my skills to the table.
Someday I'd like to learn the code and get on HF; but in the
meantime, let me learn what I can and share what I know.

Last Friday I received a very nice 8.5" x 11" certificate
from USCG CAMSLANT certifying that I had copied their last CW
transmission. While the facsimile below doesn't do justice to
the certificate, I thought I show those interested sort of what
it looked like. After all, it is a piece of history.....not as
earth-shattering as the fall of the Berlin wall, certainly, but
meaningful in its own way.

The actual certificate contains a light blue replica of the
CAMSLANT logo centered in the background, with a blue border around
the certificate edges. It's printed on white parchment-like paper
using black print.

Can't read the CO's signature, but the "Telecommunications
Specialist in Charge" is a Senior Chief Petty Officer (TCCS) and
the signature looks like "M. R. Dyer."

Anyway, here's roughly what it looks like:
****

COAST GUARD COMMUNICATION AREA MASTER STATION ATLANTIC

>> LAST MORSE CODE TRANSMISSION AWARD <<

This certifies that (name) (callsign)
has copied the last morse code transmission originated by
COAST GUARD COMMUNICATION AREA MASTER STATION ATLANTIC/NMN,
Thus marking the end of the era of RADIO TELEGRAPHY in the
COAST GUARD.

Using your jet example; requiring people to use a slide rule to perform basic calculations would be like requiring fighter pilots to be certified in a Fokker. Do they do that? No because they can learn what they need to know about a Fokker from studying them, not flying them. The same thing is true about slide rules. The issue isn't whether people should learn about logarithms, but whether they should have to use a slide rule to solve physics problems. If teaching them how to use a slide rule is the best way to teach them logarithms, then do it. Yet there are certainly many other ways to teach them about logarithms without worrying about using the proper scale on a log-log slide rule. My Sans-Strife (sp?) slide rule had something like 25 or so scales on it. I learned a mechanical process for performing calculations when I learned how to use it as opposed to some mystical bonding with logarithms.

Of course the pilot-in-training will be taught the characteristics of his machine. The objective is not so much that he is a "BETTER pilot", but to ensure that he/she is not a "DEAD pilot"! Drawing the parallel that students who know the ins and outs of a slide rule will have a greater understanding of the material presented to them is fanciful at best. What is your evidence for this assertion? I suspect that the evidence is nostalgic and not based on any studies, but I am willing to be corrected on this point. Please inform me so that I may re-evaluate.

None the less, slide rules, log tables and caluclators are tools. These tools are used for calculating. There is no doubt that slide rules and log tables are a traditional form for determining answers for multiplication and division problems. But, there is no evidence that I am aware of showing these traditional methods result in a greater understanding of the subject. Just as mistakes can be made with improper keystroking to a calculator, inattention to copying the incorrect log or antilog of a number, or incorrect addition and subtracttion, or misalignment of the slide to the wrong scale or numbers on the slide rule, will also render an incorrect result.

For greater certainty, regardless of the tool that is used to determine the answer, students should be taught how to estimate the outcome as a means of confirming the answer.

On a personal note, my initial experience with logarithms and their use for multiplication and division was in senior high school. It was not a happy experience because I just did not understand them, I barely scraped by. It was not until I was in my final year at college that I finally understood what was going on, but by that time, we had chucked our log tables and slide rules and spared ourselves a lot of the drudgery and had

gotten calculators; in fact, we were encouraged to do so by the faculty (and in those days, they were not cheap!)

Besides, if you really want to have a greater understanding of mathematics and its reationship to the real world, take calculus, IMHO.

: Ps. What do you do when your batteries go dead???

OK, what do you do when you are running out of gasoline in your car? Just like everybody else - go out and buy some. So if my batteries in my calculator were to go dead, I would do the same - I would go out and buy some. On the other hand, you could buy one of those calculators that are powered by solar cells. I can imagine that there will be those who would proclaim "Aha! No light, no calculation! You don't need power for a slide rule or log tables!", in which case I would point out that if there is insufficient ambient light to power the solar cells, it suffices to say that there is insufficient light to read the slide rule or log tables, so they are also useless in those conditions.

Did you even bother to think through what you said? What good would
it do to have pl on the repeater if you are going to sweep through and
key them all up at once? The main purpose of PL is to select which of
more than one repeater you are in range of you will key up. Besides
PL tones must be there all the time. The repeater will unkey as soon
as its tone is no longer heard, so the scheme wouldn't work in the
first place.

Source record: 247912

As an apartment dweller and a radio amateur interested in
HF CW, this group is exactly what I am looking for. It is
not just limited to discussion about antennas. Topics I
forsee include:

* dealing with landlords and covenants
* TVI and RFI to others
* TVI and RFI interference to your operation from
others.
* negotiations with neighbors on operating
* strategies for HF operations to stations out of
your own state on extremely ineffecient antennas
and low power.
* RF safety in extreme proximity.
* operating satellites with low profile equipment.
* Urban emergency operations using rapidly deployed,
improvised installations.
* Care and feeding of the older, less expensive
equipment us "stealth" operators seem to use.
* Installation of the shack in very space challenged
areas that the XYL or other significant other
lets us use.
* How to get a good ground on the 27th story.

None of those topics are related to antennas. Of course, I
also would include:

* help with making an HF antenna that is nearly
invisible and gets out.
* invisible commercial HF antennas.
* help with making a VHF or UHF antenna that is nearly
invisible and gets out.
* invisible commercial VHF/UHF antennas.
* antenna modeling
* antenna installation tips and hints

For those of us who are not rich, never will be rich, and have
less space to work with all the time, this group looks wonderful.
Please vote yes.

You know Dan quoting out of context to prove your
point is kind of like lying. Your diatribe just proves
you never read the entire thread or even an entire message.
Or you have no respect for the truth.

I never said the Radio Shack radios were crap or anything
like that. I have said that the 202/404 series were behind
the times technically. I have owned a 202 and agree it has
magnificent audio for a hand held. I don't think they are
perfect or there would not be so many posts "What does Er2
mean". Now some people responding to my post called RS stuff
crap but I did not.

What started this entire thread was some one posting that
the HTX-212 was "designed by the hams at Radio Shack and
built by Motorola". The radio is made by Maxon in Korea.
I'm sure some highly enlightened individual has opened
one up and found Motorola on a device ergo "made by Motorola".

If trying to get the truth out makes me a jerk then so be it.
I am sure that in the future I will not try this again. To
quote Jack Nicholson, "You can't handle the truth".

Not necessarily ... you could have bought it in the UK like I did. Then
it'd be a $1000 intermod disaster :-)

Still, at least Yaesu have a Customer Service Dept over here in the UK,
and they provide the same level of service as Yaesu Japan ... they're
both lousy!

Forgive me, I am not familiar with the Icom series. I assume you are speaking about 2-meter frequenecies.. Simplex is recoginized in 144.90 thru 145.10, 146.40 thru 146.58 and 147.42 thru 147.57 MHz.

Actually, I am moving my company (who also sells HP Computers, FYI), up to Harrisonburg VIRGINIA (near James Madison University) at which I was chastised last week by a faculty member of the Computer Science department because I cautioned a potential CS major about taking Fortran/Assembler/COBOL classes primarily because having those skills will not make a graduate "marketable" in the real world. I heard that faculty member tell the student that those technologies are still considered "State-Of-The-Art"...and I just had to shake my head in disapproval.

>afficianados
>will post and reply with UUE-encoded .VOC or .WAV files.

The idea that anyone would use the Internet and the telecommunications infrastructure to espouse the virtues of Morse code has always amazed me.

To now advocate using the power of DSP (contained in sound boards) so as to acquire and replay WAV files of Morse Code further indicates just how insane some of this "thinking" is.

Every time I feel the faintest urge to get back into amateur radio, I can always count on a quick visit to the rec.radio.amateur groups to wake me up real fast. Thanks for preventing me from wasting any more time and money!

Yep! A big HELLO to all my old friends and "enemies" in the world of internet amateur radio!

Has anyone noticed how cheap and disgusting qst has become. First it was a move to cheaper paper (close to tissue paper). Next, came six pages of ads up front in qst (now it is 8 or 12 pages). Then to really make it ratty, they plaster all sort of crap on the cover simimlar to supermarket tabloids. Finally, to really jam it up the members ass, they eliminate the plastic wrapper and stick the label right to the front of the magazine.

Sometime change is good, but NOT in this case!!! It sucks. QST nolonger looks like a professional Journal. It now looks like an amateur journal (tabloid is a better word)

ARRL, are you listening???

Well put.

>>Governmental permission to transmit on these frequencies does not
>>automatically produce competent operators.
>>Jack WB3U

But it does produce an accountable operator. What is a "competent" operator? I know plenty of people that I consider to be competent radio operators (they may not be hams) even though they are not radio "technicians" Very effective with a mic but dangerous with a screwdriver. But what is so wrong about that?

The reason for the use of PL's is to curb interference. If you sent all
PL's whenever you keyed up it would key up all transmitters within range
just the same as the repeater not using any PL's.

Most top of the line radios have a PL search function and it only takes a
minute to find the PL anyway.

|>
|> And why cross-post this to non-radio groups? That only creates
|> a lot of noise.
|>
|> Jeff NH6IL

My wife got her ticket for exactly the same reason as jls stated above.

Let's do the math.

Phone Free (with a year's contract of service) 0
Activation fee (Free on some specials) 0
Service Fee $35/month (for a year - as example from above) $420

So for $420 my wife and I had a cell phone for JUST EMERGENCIES !!

So yes, for a year's worth of service, you can buy a new rig a year...

> thoughs maybe we could get the big name manufactures to do it. please
> post soem thoughs on it here.

All other comments aside, there is a purpose to this proposal. What if poor old W0ABC is traveling with wife and kids and has a flat tire (insert any problem)- he can hear a half dozen repeaters in the area, but either a) doesn't have a PL decoder or auto-PL scanning function in his radio (which of course assumes the repeater transmits tone, as well as being squelched sans the proper tone- which is often an incorrect assumption) or b) has to spend time trying to find out how to access the repeater. (God forbid by trial and error of the 32 tones that most hams limit themselves to : 67 -203.5)

What the ARRL has proposed (insert flame here on how wonderful or corrupt the league is) is a standardized system to alert normal repeater users that someone needs assistance. The LiTZ, that is long tone zero system makes a lot of sense, many *commercially* sold repeater controllers include the capablility to decode it (Scom, Link, ACC, CAT, etc). Simply define the repeater to accept a long duration touch tone zero to either open the repeater for carrier squelched operation for a short duration of time (so the transient user can make his emergency request, or at least inquire and hopefully find out the tone the machine uses), or to alert users of the machine that someone needs help, or even make your machine play a message in response saying "use CTCSS tone 136.5 to access the repeater".

Of course this leaves some possibility of abuse. But the long duration of the tone makes it almost totally immune to voice-falsing, and lets face it if people want to mess with your repeater they'll be little-butt-holes no-matter-what you do.

This was a critical feature of our local ARES / ragchew /club-sponsered repeater when we finally went to tone squelch- in our case the zero tone makes the machine carrier accessed until :30 of no activity occurs (i.e. the QSO is finished). This also benefits all the people with otherwise good 10+ year old radios that refuse to buy a new radio or install an encoder.

1713. Re ZL9GD DX Operation.

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-26 00:00:00 UTC
From: walker_cm@ix.wcc.govt.nz
Message-ID: <3nlenf$hoi@golem.wcc.govt.nz>
Source record: 247686

I asked the NZART DX Editor (Ron, ZL2TT) about the ZL9GD oepration. Here's
his response.

"There's been some discussion concerning the ZL9GD operation from the
Auckland Islands. I've spoken with Graham, ZL4MV, the operator of ZL9GD.
He confirms that he operated both from a ship, and also on land. The land
operation was mainly 21MHz CW. The ship operation was both at anchor and
on the move.
Within the next few days, Graham will send details to DXCC at ARRL,
explaining the situation.
Graham, although a "ham" for 40 years or more, is NOT a DX'er and was
really unaware of the DXCC policy re shipboard operation.
We await with interest the response from the DXCC Committee.

Well, to each his own. I have found quite the opposite. I have had nothing but good results with their products and with their service dept (the one time that I did require it was through my own - how should I say - stupidity). They fixed it in warranty, although they probably shouldn't have. I own 4 of their radios. OTOH, I own 1 Kenwood and of course it's been in the shop. Oh and my old Alinco mobile UHF (ALR72T) has never had a problem. But my friends

ARLX020 Dana Atchley, W1CF, SK

Dana Atchley, W1CF, SK

Dana Atchley, W1CF, died April 22, 1995, after a long illness. He was 77 years old and lived in Lincoln, Massachusetts.

He was a founder of Microwave Associates, a Fortune 500 company for which he served as president and chairman of the board. Among the employees of Microwave Associates in years past was Sam Harris, W1FZJ, who engineered the Arecibo radiotelescope in Puerto Rico.

In the 1970s Atchley created the ''four square'' vertical phased array, for which he was awarded a patent. He later described the antenna in QST. That antenna in recent years has seen a resurgence in interest among low-band HF DXers and has become virtually their antenna of choice on 80 meters.

Dana, then W1HKK, held postwar DXCC number 3.

Dana Atchley was one of the few graduates of Harvard College as an engineer. He was the son of the famed Columbia University/Presbyterian Hospital physician of the same name, after whom the Atchley Pavilion is named. He was a descendant of two American presidents, as a relative of the Adams family.

Atchley was an active promoter of amateur use of the microwave bands. He was instrumental in the creation of ''The New Frontier'' column in QST. He also arranged for a grant to the Smithsonian Institution from MA/COM in 1983 to help pay for renovations to NN3SI, the amateur exhibit station there.

A memorial service will be held on May 31, 1995, at 11 AM, at the Acton Congregational Church in Acton, Massachusetts.

1718. license upgrade

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-26 00:00:00 UTC
From: js024b@uhura.cc.rochester.edu
Message-ID: <1995Apr26.224939.4017@galileo.cc.rochester.edu>
Source record: 247691

I had upgraded on April 15 from Tech Plus to Advanced and then on April 18 to Extra. I called up the FCC was told my Form 610 for my upgrade to Advanced was returned to W5YI due to a "data mismatch". I think it is because of my birthday (the FCC has it as May 17 when I upgraded to Advanced, but it really is May 18 which they use to have). The Form 610 is lost and everything is screwed up (I can't get my Extra callsign until I send ARRL a copy of my advanced license which seems to be a long way in coming. When I talked to W5YI, they mentioned that there are new rules that might allow them to do the upgrade to Extra as well (to speed everything up as everything is screwed up with my previous upgrade) even though I went through ARRL.

Does anybody know if that is possible?

Thanks.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 26/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 26 APRIL AND FORECAST FOR 27 APRIL - 29 APRIL

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 25 Apr
Daily Proton Fluence >1 MeV: 2.5E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 2.6E+08 (moderate)
X-ray background: A5.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
27 Apr 28 Apr 29 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 27 Apr: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled

Estimated Indices : A K Observed A Index 25 Apr
Learmonth 13 3323 3332
Fredericksburg 12 13
Planetary 12 14

Observed Kp for 25 Apr: 3532 3222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
27 Apr 10 Quiet to unsettled
28 Apr 15 Quiet to unsettled
29 Apr 15 Unsettled
COMMENT: Active periods possible during local night April 29 - 30.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

26 Apr normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Apr normal normal fair
28 Apr normal normal fair
29 Apr normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
26 Apr 21 near predicted monthly values

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
27 Apr 20 Near predicted monthly values
28 Apr 20 Near predicted monthly values
29 Apr 20 Near predicted monthly values
COMMENT: MUFs at Townsville were depressed 10-15% early in the UT day
then recovering to near predicted monthly values. Spread F was
observed during local night hours at Sydney and Townsville.

DOD (both military and non-military) now has major systems running
in a UNIX environment; programmers working for contractors which develop
these systems must be competent in C and C++, UNIX & Xwindows experience
a definite plus as well.

In the commercial sector, at least in this area, C++ is the thing to
know. Check the Washington Post employment section; if you know C++, you
can almost write your own ticket. In fact, defense contractors are *losing*
valuable programmers who are competent in C++ because the private sector
is offering salaries 20-30% higher than contractors are currently paying
(and that's no exaggeration, BTW).

Source record: 247701

----Some fellow said:

JJ>>>Anyone with a valid Amateur Radio license is a real ham--period.

----Then another guy said:

JJ>>I couldn't disagree more, particularly when traditionally accepted
JJ>>skills are being removed as prerequisites to the license.
JJ>>Governmental permission to transmit on these frequencies does not
JJ>>automatically produce competent operators.

----Then Jeff said

JJ>I couldn't agree more with you Jack. And if the code requirement for
JJ>HF privileges is ever dropped, then those new licensees will be no
JJ>different than CB'ers.

----Now I gotta say:

I'm surprised Jeff. Usually I find myself in general agreement
with you, but in this case I take a different view.

I agree with the first fellow. While I am an avid CW hound, and
do not support a removal of the Morse requirements for HF licenses,
knowing Morse is not the factor which makes you a "real" ham.

Taking Jeffs' statement at face value, you would reach the conclusion
that Technicians are "no different than CB'ers" except they are on
UHF/VHF instead of 27MCs. Clearly that is balderdash! Nor does it
logically follow that if these same folks took an additional written
test (General) without knowing Morse that they suddenly would
"regress" to become "no different than CB'ers".

"Real" Amateur Radio Operator: Definition -- A person who has been
issued an Amateur Radio License by the FCC. These licenses come in
6 classes.

>> >You're not the only one seeing the problem. Starting around the
>> >beginning of the year, I stopped getting articles from the DX
>> >reflector. I have tried to re-subscribe on several occasions,
>> >but nothing ever happens. And so it goes...

Indeed :-)

The list has been experiencing an ongoing set of growing pains since Xmas past. At that time I decided to automate control of the list using one of the Unix Listserv packages. This ended up breaking everything in sight, and increased my workload tenfold, rather than reducing it. I ended up going back to the manual system in early February, did some tuning of the MTA software, and got things back on track just in time to leave my job at the University. Of course, my Internet link through the University left at the same time :-(

The list is currently exploded on a machine sitting behind a UUCP mail link. This works fine, however the mail gateway I use (one of the local Internet Service Providers) has very unstable Internet connectivity. In particular, they cannot seem to route to many parts of the Internet. If you have sent in a subscription request and haven't heard back, it's because your network is not reachable (at the IP layer) from here.

I'm going to be switching to a new ISP, at which time I will once again have a direct Internet connection to my LAN at home. My new ISP uses a different network carrier, and I'm hoping most of these connectivity problems will go away when I switch over. This isn't going to happen for at least another three to four weeks, though. Until then we'll just have to muddle along as best we can.

>operating a radio is hardly a small facet of the service; it's a
>primary raison d'etre for Amateur Radio.

Jon, it says self-training, (and) intercommunication, *and* technical
investigation, not self-training, (or) intercommunications, *or* technical
investigation. What is intended is obviously an intersection of sets
and not non-intersecting choices. Someone who is just a *user* of a
radio appliance is outside the charter. Someone who just builds equipment
and never transmits is outside the charter too, but that's rather irrelevant
since no amateur license is needed if one never transmits.

Of course building equipment isn't the only form of technical investigation,
but just being a knob twirling key pushing operator of Japanese equipment
isn't a technical investigation at all. Cellular phone users master it in
about 2 minutes. It takes CBers a bit longer since they have to go get a
lobotomy first so they can talk like redneck retards. Unfortunately, a lot
of people think that qualifies them to be members of the amateur service
as well. If you haven't a clue what's happening behind that faceplate,
and/or don't care to find out, you aren't an amateur. You're just a CBer
who got on the wrong bus (no matter how fast you can beep Morse Code).
Technical curiosity is the keystone of what it means to be an amateur.

The best Windoze packet terminal program I've seen (for any TNC) is UltraPak
by G4WFT. I think the current version is 2.0

You're welcome to download it from here, but it would mean a transatlantic
phone call. It's in file area 2 (packet radio), ULTPAK20.ARJ

I think you'll probably find it at 'Ham Distribution Network BBS' on
(214) 226 1181 or 226 1182

On 24 Apr 1995 16:17:46 GMT Mark D. Conner (mconner@rain.atms.purdue.edu) wrote in rec.radio.amateur.misc:

: Somehow the idea that 3975 kHz is a "broadcasting" frequency seems to
: be spreading (unless for some reason it actually is in Europe). This
: is a problem that seems to be getting worse instead of better.

Is this really a problem?

Spectrum is limited.

The worst use of spectrum is two people talking. On the average 1 out of 2 people with their radios on is making potential interference for someone else who might want to use the channel.

A net is somewhat better, if there are 10 people in the net presumably 1 in 10 instead of 1 in 2 is putting rf into the air; think of it as (on average) 4 or 5 vacant channels available to others.

Someone sending a bulletin that 100 people want to listen to is reducing QRM on 50 other frequencies.

And yes, some people do find W1AW, *and* K1MAN interesting to listen to.

The other side is:

It's relatively easy for two people in QSO to look around for a new frequency. It happens all the time. And not just because someone starts to transmit on "their" frequency. Two QSOs can be going on on the same frequency, but not cause mutual interference until the ionosphere changes.

It's a little harder for a net, sure, but still not too hard to find a frequency to move to when conditions change.

A station sending bulletins to perhaps hundreds or thousands of listeners doesn't have the same feedback mechanisms available to ensure that a change of frequency will be satisfactory. There are no "rights" to particular frequencies, of course.

> Service Fee $35/month (for a year - as example from above) $420
>So for $420 my wife and I had a cell phone for JUST EMERGENCIES !!

The value of a cell phone to some people might not be simple math. Let's figure out the "value". (This rehashes something that I discussed with someone the net this morning)

Ham radio is great...

If you have an interest in radio as a hobby. The idea that a 2M radio is comparable to a cellular phone is nuts. They serve different purposes. And different needs of different people.

I have both a cellular phone and, of course, a dual band mobile and hand-held.

On the cell phone I can call anyone that has a telephone. There are no restrictions on what I talk about. I have never had a roaming access problem (I am on GTE Mobilnet). No one has to be listening to the frequency to help me - if you think there is someone listening to every repeater 24 hours a day, you need to get around more. I don't need to thumb through any repeater directories looking for open auto patches (or open repeaters for that matter) when away from home. I can make long distance calls as required if my emergency is not something handled by 911. And a NON HAM can CALL ME by picking up his phone and dialing my number. What's that worth to me? About $30 a month and .30 a minute during peak hours. It is my first choice for emergency calls.

Yeah yeah yeah... like everyone else, even I have one of those stories about how my ham radio worked when my cell phone wouldn't. It was 440 that worked for me that time, not 2M. Considering that one incident up against the dozens of other times I have punched 911 on my Oki and I have decided what's effective for "just emergencies".

Also consider that repeaters are not free. Someone is paying for them. They purchased (or otherwise aquired) the radio equipment. Many of the high level repeaters we have here in California have some kind of cost for rent. Phone lines have at least a basic service rate, plus toll calls. And who pays for it? Local

users? Maybe one nice guy? The repeater owners also spend the time required to do maintenance and other things required to keep those repeaters on the air.

Would I give up my ham radio if I had to chose between it and a cell phone. No. Because I get a lot satisfaction from ham radio and I know how to use it when I am in a bind. I didn't get my ticket "just for emergencies". And I discourage those that show an interest in the amateur service just as an alternative to paying for a cellular phone. That's not what the "service" is for.

In conclusion...this thread is discussing apples and oranges. But discussion is good. When I get tired of this subject I will ignore the thread - it will eventually go away.

From: johnliu@lainet.com
Message-ID: <3nkf93$mpv@lainet2.lainet.com>
Source record: 247807

I will be traveling in Alaska and remote parts of Canada with a pickup camper. For maximum range on 2 meters, would people recommend a good vertical (I could probably mount a base station antenna and use the aluminium roof as a groundplane) or a Yagi of reasonable size (I think a 5" or 6" length is as much as is practical)? I would plan to remove the antenna when traveling. Also, my 2 meter mobile radio has 50 watts. Would there be great benefit to adding an amplifier? Due to the cost, I'd prefer not to do so.

i believe if you'll check, you'll find there have been several times when "traditionally accepted" things have been done away with in amateur radio.

Logging. Identifying both stations in the typical QSO. Notifying the FCC when you are going to be on a trip. Requiring crystal control for novice operators. Having the FCC run all the examinations....

I would like to think that hams aren't infatuated with becoming Tevye and spend all the time singing about "Tradition!"... it'd be as crazy as, crazy as a Fiddler on the Roof!

>I'm stumped! Can anyone help?

Well lets see, 250-150=100 watts. Yep, looks right. Your Bird is
an analog computer. It takes the sample voltage to be a voltage
across 50 ohms and then uses the relationship P=E^2/50 to derive
its meter scale. When the impedance presented by the line *isn't*
50 ohms, the analog computer will give a different result. The
forward and reverse *ratios* will remain correct, so VSWR can
be calculated, but the power readings have to be adjusted for
the actual impedance presented.

Manipulation of the numbers shows a VSWR of 7.873 and a presented
impedance of 125 ohms. We don't know how that impedance is aportioned
between resistance and reactance, nor do we know the line length,
so we can't determine the actual values at the antenna from the
data you've given us.

While not state-of-the-art, COBOL makes a person quite marketable to the
big-iron shops of the Financial and Insurance agencies. Fortran makes you
smell good to engineering companies, and Assembler is used anywhere that
real-time applications or imbeded control is required.

Not saying I want to know COBOL, Fortran, or 6502 assembly, but there is
a market for just about anything... 8-)

I don't see where the ITU gives priority to technical activities over
operating activities. In fact, it calls out "intercommunication" as
one of the purposes of the service along with, but not subsidiary to,
"technical investigation." ("Self training" I take to mean both in
technical *and* operational facets of radio communication.) So "just"
operating a radio is hardly a small facet of the service; it's a
primary raison d'etre for Amateur Radio.

Sir,
we have a vague opportunity to rid ourselves of stations like K1MAN
forever. I have been told that we should solicit comments from stations
outside the US concerning ONE-WAY BROADCASTING STATIONS.

If you would like the pertinent information please goto my web page

http://www.mindspring.com/~ko4ta/bestofnet.html.

You must file your comments before May 4th.

Please help and file your comments and here is how to do it.

1. Send your comments to;
(don't abbreviate to FCC)

The Secretary
The Federal Communications Commission
Washington, DC 20554

2. Please only type written or word processor generated comments.

3. Be sure and place the rule making number (RM 8626) at the top of each
page. The pages can
get seperated and misplaced without them.
4. Send 5 copies. Even though one copy comments will be accepted. 5. Send
a copy of your comments to ;

Raymond A.Kowalski, Keller and Heckman
1001 G Street NW
Washington, DC 20001

Thank you
Sincerely,
Don Simpson - ko4ta@mindspring.com

FREE - NEW Macintosh HAM TEST SIMULATORS

Studying for a ham test and have access to an Mac? Upgrade Fast - Simulate
the test and get STIMULATED!

Send me (1) *FORMATTED* Mac diskette and you'll get back (5) HyperCard stacks
that simulate the tests. Include a Self Addressed and Stamped Disk mailer marked
TESTS.

Novice and Tech tests are from the latest test pools.

Scores of 90% or greater even get applause!

Also included is a MORSE program, complete with practice QSO files for drill.

These HyperCard stacks were designed and written by Diana, KC1SP and have
proven useful to hundreds of hams on the upgrade path. Each stack is public
domain, free of any charges, and make a great gift of encouragement.

73,

Gohd, I hate being prototypical, but a `me too' for this one. When we were creating the new rec.radio.amateur.* heirarchy, this (*.qrp) was one of the proposed groups that disappeared because of not enough support though ..., but I would expect more support for the slightly broader *.qrp group than for the badly named *.low-profile (my prior comments about low-profile surface mount components).

I returned to ham radio in March of 1994 after an absence of 20 years. When I was last active, the ARRL and its publications were, IMHO, very largely STALE. I believe the current QST is a MAJOR step forward-- even with the minor problem of the label on the front cover.

SS>I finally got around to opening the May QST and noticed the ad on p.
SS>2 for the new Icom IC-775DSP HF rig. Looks awesome, with DSP
SS>filtering at the IF. Has anyone seen/used/purchased this transceiver
SS>yet? Is it as good as it sounds? How much is it selling for?
SS>

The radio will be officially introduced at Dayton according to my information. Looks nice, but I was hoping for more. The DSP is not in the IF, but at the AF level (both TX and RX). Looks like some really nice features for CW ops have been incorporated. The "dual watch" feature unfortunately only works "in-band", so it won't be a help to contesters. Don't know the price but have heard rumors in the 3.8-4K$ range.

I am in the process of writing a draft for an article about batteries,
and would like input from you about the following:

======================== NICAD SECTION ======================

1. If you use the stock FNB-25 (or is it FNB-17?) battery, on average use,
how long will a charge on

low power last?

On high power?

2. Do you use:

the quick (3 hour) charger? or

stock wall charger? or

continuously charge it as you are talking through a cigarette lighter plug?

3. When the battery dies, after a recharge, how long will it last on

low power?

high power?

4. Approximately how many times a week do you recharge it?

5. If you use the quick charger, after how many charges have you seen a
descrease in its ability to hold a charge?

6. What is the average current draw on:

low power?

high power?

================== Dry-cell Section ==========================

1. If you use the AA dry-cell pack, how long does a set of batteries last on
average use

on low power?

on high power?

2. Do you use alkaline or Nicad AA batteries?

3. How much money do you spend on average on a pack of 6 AA cells?

4. What is the average current draw on:

low power?

high power?

============== Combination Section ======================

1. If you use both the AA and Nicad packs, which tends to last longer?

2. Which do you use most often?

============== Miscellaneous Section ======================

If you have any other information you feel would be appropriate, please
feel free to send it to me.

==================== END of survey ======================

If you take the survey, all received copies will be summed and averaged.

No person or callsign who submits a completed survey will be mentioned in
the article. (Sorry).

Please answer as best you can.

Thank you very much for your time. If you have any questions or
comments about the survey, ** PLEASE ** e-mail me direct if possible.

My e-mail addresses are: wy1z@neu.edu or scotte@ccs.neu.edu

|>>Enough with the "give away" license red herring, it's not being
|>>proposed and simply doesn't wash.
|>
|>All of the stated reasoning behind no-code can be used to invoke totally
|>non-qualifying licenses.

Not true. Perhaps you haven't been listening. What reason can be used to invoke "totally non-qualifying licenses" (whatever that means)? Is this a case of CW bigotry? You value CW, like CW, and therefore believe that anyone who doesn't is non-qualified?

|> You earlier said (correct me if I'm wrong) that
|>you see no logic to justifiy code as a prerequisite to HF 'phone privelages.
|>Does this mean that we should have a different class of license for each
|>mode?

Why not? Why should CW be placed above all other modes especially when other services are dropping CW like a hot potato? Where in 97.1 does it support holding on to the past?

|>I'll go out on a limb and say I don't think that's what you intend. If I'm
|>correct in this, then the grounds for removing CW also justify removal of
|>SSB theory questions, because some hams only want to operate CW.

That in fact would be fine with me if you only grant privileges for the modulation techniques that the applicant demonstrated knowledge about.

|>Likewise, we can remove digital theory, because some will only use 'phone.
|>Others shouldn't be required to learn any circuit theory at all, because
|>their equipment is commercially manufactured. Etc., etc.

Ah, here is the big falacy. I don't want to see things removed, i.e., lessened, only changed. If someone demonstrates knowledge of digital techniques, why is that any less valid than being able to open and close a switch with rhythm?

|>When I was in college, the complaints from engineers forced to take courses
|>in English were based on an identical argument. "You don't need English to
|>design a bridge." They were right, but what's the value of the degree if its
|>held by illiterate engineers?

Ah, but again, an engineer needs to be able to communicate and write, so elementary English courses make sense. Someone that chooses to only operate packet, SSTV, or phone, has no need for CW.

|>CW serves a legitimate purpose in the amateur licensing process. Removal
|>of this requirement on the stated grounds would eventually destroy our image
|>as a publicly-valued resource. Once that takes place, the political power that
|>maintains our frequencies will vanish, as will the hobby.

Excuse me, but let's have a reality check. Are you saying that if we remove the CW requirement that anyone outside the service would even notice? Certainly not the general public as they haven't a clue what amateur radio is about. And even the ones that do generally can't understand what's being communicated if CW is being used. In fact, I'd guess that the public would view us in the positive way if they could understand what we're communicating.

|>BTW, we have historical data not available to Chicken Little.

Huh? The historical data is that prior to the revised technician class license, the amateur radio service was rapidly aging and declining. Why it was limited to technician class and not other classes can only be attributed to "tradition" (Tevye starts singing at this point.)

>for packet, etc? Or run it at high power plugged in if the battery is
>nearly dead?

Just unplug the battery when you want to run the radio from an
external power source. It's inconvenient, but it works.

I think the manual should have been more clear on this subject. It
tells you not to overcharge the battery, and it tells you that the
external power jack can be used to power the radio, but it never
specifically warns you to remove the battery before powering it from
the external jack for extended periods. Of course, it's obvious if you
read the schematic... :-)

One word of caution: the radio gets hot very fast when you transmit at
high power with a 12V supply. I would think twice before running it at
high power from 12V unattended (such as on a packet digipeater).

Have fun with your new toy!

>this line even at the highest transmitter power settings.

Gee Fred, what are you powering off that thing, a HT? :-)

Even at a teensy 7 amp draw, a tenth of an ohm resistance
will still drop the voltage to the radio to 11.8 volts.
Most modern mobile rigs get really squirrelly when the
voltage drops down into the mid-elevens. With a "real"
radio that's likely to draw at least 20 amps, you're
going to run into trouble in a hurry.

In particular, depending on the "frame" for a return is
asking for trouble. In today's painted before assembly
vehicles, which often don't even have a full frame under
the vehicle, getting a low resistance path back to the
battery becomes an iffy proposal. And the mutual current
meshes formed with other auto systems gives you noise
modulation on your power. Can you say "ground loop"?
I knew you could. Running a heavy pair of wires directly
to the battery gives you the cleanest power you can get
in a vehicle.

The auto manufacturers recomend it, the radio manufacturers
recomend it, and experienced radio installers swear by it.
It's not "hooey".

``...something for nothing and the chicks for free.''

Is there now a lack of activity on HF so that we're in danger of losing spectrum unless we get all 700,000 US hams down there? Nothing is wrong with the current requirements, just some of the current hams who want privileges without meeting the requirements.

And some wisdom from davev@atkc.COM (Dave van De Kerk)

:As an apartment dweller and a radio amateur interested in
:HF CW, this group is exactly what I am looking for. It is
:not just limited to discussion about antennas. Topics I
:forsee include:

* dealing with landlords and covenants
* TVI and RFI to others
* TVI and RFI interference to your operation from
others.
* negotiations with neighbors on operating
* strategies for HF operations to stations out of
your own state on extremely ineffecient antennas
and low power.
* RF safety in extreme proximity.
* operating satellites with low profile equipment.
* Urban emergency operations using rapidly deployed,

improvised installations.
* Care and feeding of the older, less expensive
equipment us "stealth" operators seem to use.
* Installation of the shack in very space challenged
areas that the XYL or other significant other
lets us use.
* How to get a good ground on the 27th story.

:None of those topics are related to antennas. Of course, I
:also would include:

* help with making an HF antenna that is nearly
invisible and gets out.
* invisible commercial HF antennas.
* help with making a VHF or UHF antenna that is nearly
invisible and gets out.
* invisible commercial VHF/UHF antennas.
* antenna modeling
* antenna installation tips and hints

:For those of us who are not rich, never will be rich, and have
:less space to work with all the time, this group looks wonderful.
:Please vote yes.

Low-profile ham radio is an extremely challanging and highly specialized pursuit of the Hobby. As quoted herein, there are a myriad of subjects that need to be cussed and discussed. I have been a fan of operating my HF station under all kinds of conditions, mobile and portable and I highly endorse this newsgroup. Just because some of us are fortunate enough to have full-size dipoles and gain antennas NOW, remember that it wasn't always this way and that there are others who need this exchange of specialized information to learn and experiment to improve their skills and talents in this area.

If the Net can support 8,000 + newsgroups, would one more really make a difference? Next tine you take a trip, try taking along a 40M QRP transciever and some magnet wire and try to make a contact or two. This kind of activity can be great therapy after a day full of snake-pit business meetings. Try working some of your buddies back home from your Company-paid hotel room. Its a lot of fun! At least if you are not into trying this, you may find it enjoyable and entertaining to read the experience of others. Remember, the basis of our Hobby and license is EXPERIMENTATION! With the proliferation of consumer-grade transcievers and "rice rockets" which are not generally user-servicable, can any of you tell me any areas of research and experimentation other than antennas and operating under low-profile conditions? So, loosen up you detractors, and think before you condemn! No one's twisting your arm to read or participate in this proposed newsgroup. You probably wouldn't have much to contribute anyways!

Donning asbestos suit! Fire away! But no replies until after Dayton!

My QST without the plastic has arrived looking just fine, so far.
Most of my magazines arrive, without plastic wrap, looking good.
If one doesn't, and it's important to me, I let the publisher know,
and always get a nice clean new copy in a first-class envelope.
It's better for the environment, it's cheaper for the publisher, and
both of these benefit me. I did, in fact, tell my local ARRL rep (I
forget which one) that I DIDN'T like the plastic bag. This was an
unsolicited comment.

I agree that the cover isn't as good looking, but it's more useful.
The paper seems to be of adequate quality, and ads pay a lot of the
cost of the magazine, and are informative.

It's my magazine, too.

BayMOO,an all-text virtual reality on the NET, has just completed an installation of a room that allows people to listen to AND send transmissions to packet radios all over the world. The room allows the non-ham visitor to see transmissions coming into BayMOO via server link, with hundreds of packet end nodes all over the world. Americans are in a minority; so if you speak French, German, Spanish or Portuguese, all the better!

Hams can be give a call-sign property by the room's owners. They can then transmit, and their transmissions are automatically prefaced with their callsigns. The MOO environment makes transmission and legibility a breeze. It's truly a breath-taking experience, and a big leap for Hams with an internet connection.

To get to BayMOO, telnet to this address:

baymoo.sfsu.edu 8888

If you just want to look around for the day, or for a couple of days, use your call-sign as your guest login name. If you want a permanent character, write to:

rk@worldbit.com

and tell him you want your callsign as your BayMOO "handle."

When you log into BayMOO, just follow instructions. Type HELP MOVEMENT and HELP COMMUNICATION for the basics.

The type

@go Virtual Ham Central

which will transport you to the packet room. You will need to have either Akira or Dr.J give you a property that allows you to transmit, and that automatically prefaces your transmissions with your callsign.

The Grand Opening of Virtual Ham Central is Wednesday, April 26, at 7 p.m. PST. Be there for the grand opening of a new era in Ham radio!

The reason for a group is to be if there will be sustainable discussions. This group is being proposed has a *lot* to do with rec.radio.amateur.antenna with a bit of the inflamatory rec.radio.amateur.policy thrown in to boot. If the existing group structure can support discussions proposed in the group, then one should ask `Why do some people feel the existing group is inappropriate for this discussion'.

>Technical curiosity is the keystone of what it means to be an amateur.

Excuse the possibly over-long quote, but I agree so firmly with what Gary says here that I wanted to give it a little more exposure. The written tests reflect the fundamental technical nature of our hobby in that you cannot pass them if you score 0 on the technical questions, no matter how well you do on the rest of the test. No other single facet of the written tests has such a great effect on your final score. For many, technical investigation may begin with as little as learning more semiconductor theory than Points iN Proudly, and such self-education is as much in line with the goals of amateur radio as the most cutting-edge technical exploration. I believe anyone who has no interest in the world "behind the faceplate" is indeed on the wrong bus, and to the extent that our test revisions encourage this approach they do a disservice to our hobby.

>when traveling. Also, my 2 meter mobile radio has 50
>watts. Would there be great benefit to adding an
>amplifier? Due to the cost, I'd prefer not to do so.

A beam will outperform a vertical, assuming you mount it at
the same height and know which way to point it. One only
5 or 6 *inches* long wouldn't be very useful, however. I
assume you meant to use ', the symbol for feet. The best
length for the yagi boom would be about two wavelengths,
IE 4 meters or about 13 feet. Longer than that and you
quickly reach a point of diminishing returns. However,
a shorter yagi will still do well. One about half that
length and using 10 or 11 elements should perform well.
If you are working FM, as I assume you are, then make
sure the beam is mounted vertically polarized. A horizonally
polarized beam will give you severe cross polarization loss
with other stations using vertical antennas.

Now height is the all important factor at VHF. It's better
to have an antenna at a greater height than for the antenna
to have greater gain. If you can't arrange to mount the beam
as high as a simple vertical, then the vertical will be the
better choice. For example, if you can pull a simple twinlead
J-pole *way* up in a tall tree, it'll do better than a beam
mounted on a 15 foot mast by the camper. (But consider a
Radio Shack 40 foot telescoping mast. It will collapse to
a length short enough to convienently store on a roof rack,
yet will give you very good height to mount the beam when
you stop for the day. A U-clamp on your headache poles will
allow you to clamp the mast vertical next to the camper
without the need for guy wires. If you leave the clamp
slightly loose, you can rotate the mast by hand to point
the beam.)

An amplifier shouldn't be necessary. The limitation is usually
going to be on you hearing them, not vice versa. Use good coax,
you can't afford losses. Belden 9913 or the Wireman's 4XL grade

should do nicely.

Gary

Ralph (and others),

First, Thanks for the the civil replys. I have received some replys which are downright rude. I wasn't sure if the ARRL used this number for other purposes. I have found out from another message sent to me that they have another 800 number set up -- 1-800-32new ham set up primarily to attract new members.

Yes, I will send the ARRL my comments, after all it is MY magazine. I have no complaints about the quality of the articles within QST. As a matter of fact, I believe it to be the best Amateur Radio publication out there. My comments concern the paper it is printed on, the cover which houses it, the plastic wrap which keeps it nice, and all those ads in the front of the magazine. Period. As far as I know, nobody from the ARRL asked the members which do you prefer; a nice crisp clean professional looking magazine, or a ratty, postmarked, dogeared, torn, magazine. Dues may change based on the answer. I was never given the choice.

Editorially, with exception of the advertising up front, the magazine is the best of the best. It looks super! Great articles, great graphics, great format! Why waste all that quality on poor paper, no wrapper, and a supermarket tabloid cover?

I know I will get flamed some more for my comments here (I am sending this also on the reflector), but too bad. This is my opinion. The personal responses I have received have been 50-50 in support of the new QST.

Again, thank you for the civil replys. The non-civil comments are redirected to dev/nil

Len WF2V

PS: Your contest scores are printed in QST. This is applicable to the contest reflector! Skip the message if you are not interested.

>Enough with the "give away" license red herring, it's not being
>proposed and simply doesn't wash.

All of the stated reasoning behind no-code can be used to invoke totally non-qualifying licenses. You earlier said (correct me if I'm wrong) that you see no logic to justifiy code as a prerequisite to HF 'phone privelages. Does this mean that we should have a different class of license for each mode?

I'll go out on a limb and say I don't think that's what you intend. If I'm correct in this, then the grounds for removing CW also justify removal of SSB theory questions, because some hams only want to operate CW. Likewise, we can remove digital theory, because some will only use 'phone. Others shouldn't be required to learn any circuit theory at all, because their equipment is commercially manufactured. Etc., etc.

When I was in college, the complaints from engineers forced to take courses in English were based on an identical argument. "You don't need English to design a bridge." They were right, but what's the value of the degree if its held by illiterate engineers?

CW serves a legitimate purpose in the amateur licensing process. Removal of this requirement on the stated grounds would eventually destroy our image as a publicly-valued resource. Once that takes place, the political power that maintains our frequencies will vanish, as will the hobby.

BTW, we have historical data not available to Chicken Little.

73,

Jack WB3U

Hi,

I've always thought it would be great if one could make a really small direction-finding unit that would be the size of a small calculator, including the antenna (something like James Bond would use). I'm curious if anyone has ever tried making such a unit, and would like to share their experiences with it. I've never gotten beyond the "thinking about it" stage myself. I do think that a ferrite loop, such as the ones found in old AM pocket radios might have a good chance of working. However, that would only probably work at frequencies of several MHz, and the transmitter would have to have a big antenna to get the signal out. Anyway, I'd appreciate any comments.

Jim

SB QST @ ARL $ARLB045
ARLB045 HF auto digital approved

ZCZC AG12
QST de W1AW
ARRL Bulletin 45 ARLB045
From ARRL Headquarters
Newington CT April 26, 1995
To all radio amateurs

SB QST ARL ARLB045
ARLB045 HF auto digital approved

The FCC will amend its rules to permit limited automatic control of
digital stations on the amateur HF bands.

The action, in PR Docket 94-59, was announced in a press release.
The automatically controlled station must either be connected to
another station under manual control, or must transmit within a
subband designated for this purpose.

Those subbands have not yet been announced.

The Commission said it believes these rule changes will allow
amateurs to ''contribute to communication technology'' and to advance
amateurs' communication and technical skills.

More information was in August 1994 QST, on page 71.

>I understand that the text was "What hath God wrought" Is that correct?

>Fitting, isn't it...

Actually, the entire transmission ran about 15 minutes (I copied the machine-sent version on 5870 kHz which was sent at about 18 WPM; I understand that one other frequency (maybe more) was hand-sent by TC3 Morales at about 22 WPM and had a slightly different text (a word here and there, etc.).

The complete text stated that the CG was shutting down HF CW operations, talked about the history and original mission, mentioned the modern communictions implementations which had rendered CW outmoded in the maritime distress arena, and contained poignant statements like "...and the chilling S O S signal will never again be heard by a Coast Guard radio station."

The text closed with "From all Coast Guard telecommunication specialists we bid you 73s. What hath God wrought. Signed CG CAMSLANT. DE NMN SK" (if I misplaced or dropped a word here, I'm doing this from memory, but you get the idea. It definitely left a lump in the throat, and I think reading the text might have the same effect on someone who doesn't care for CW; it's a somewhat nostalgic historical event, one of those milestones Mankind passes through as we progress. Painful for some, but inevitable.)

BTW, I'll be glad to e-mail the text to anyone who would like a copy.

Just a note....kind of fun to notice that Icom comes out with
DSP notch filter in the AF circuit and they advertise it as a major
new feature, while the Ten Tec OMNI VI has had it for years.

Similarly, the "dual watch" feature, well, Ten Tec has had it in
its Triton IV series with the external vfo since about 1975...and
in all their analog rigs after that.

NOT that the ICOM isn't a great rig to come....I would love to try
one out, but I just like to note that the advertising seems to drum
up the interest, not always the actual features themselves.

Let me get this straight: are you saying that the prestige of amateur
radio depends entirely on testing for Morse code, and that elimination
of this requirement would be followed by the demise of amateur radio?

Source record: 247877

Hello Netizens:

I got my tech class license long time ago. But kind of lost
interest and left it without even QSOing once. Last week
I got my first ham equipment (a 2m HT).

Right now I dont know what to do

I choose a freq and sent a voice CQ call for a minute. I didnt
get any reply.
There were quite a few people talking 2 each other on other freqs.
Is it a good practice to join them ?
(ie how do i talk to them ? is there anything that i should do
to tell them I want to join their conversation ?)

I hear CW between conversations being transmitted in 2m. What is its exact
use ?

How do I contact using the repeater ?

How can I find out the repeater freq in my area ?
(I am in Wheaton,Illinois a suburb of Chicago zip code : 60187)

There are a lot of questions. Even if you could answer few of them
that would be great and I will very much appreciate if u could
reply 2 me directly (since I dont have direct access to Usenet)

Thanx a lot.

>graduate "marketable" in the real world. I heard that faculty member
>tell the student that those technologies are still considered "State-
>Of-The-Art"...and I just had to shake my head in disapproval.

Having gone through interviewing headaches and finally securing a
job in EE last month (I'm graduating NCSU here in a matter of days),
I can say for sure that most positions only value some sort of Assembly
background (to make sure you can), C, and C++. Some positions with
workstations around like it if you can say you know UNIX, Xwindows, and
shell scripts, but of course your mileage may vary. I had
Pascal on my resume, and noone ever, at any level, asked me about it
or my expertise in it. Only C, C++, and infrequently assembly.
Programmers, I'm sure would be asked more frequently (I know my
older brother was 3 years ago). The only other thing that comes to
mind is Ada for some government jobs (which, nevertheless do all
development code in C, then convert over when they have to).

If anybody seriously uses Cobol or Fortran, let me know, but I wish
these backward CS guys would go away. There are some good ones in the
university, but the jokers make you want to cry, don't they?

Hell, yes! They're all over the place, few sources:

Super Morse 4.15 - shareware
Morse Academy - no registration required
Log on into a decent BBS and you should find the above with others also check the following BBSes - there are literally 10 times as many available to dial:

ARRL BBS 1-203-666-0578
WB3FFV BBS 1-301-625-0817
HAM BBS 1-614-895-2553

ARRL sells them!
Radio Shack stocks code tapes that you could copy to disk.
Ham magazines advertise Dos code programs!
Talk to local Hams for their sources!
Local Amateur Radio Clubs have them for their training classes!
Geez, there is a "million" sources out there!

�� hedberg@ix.netcom.com to ALL
��ķ
� ��I recently bought a DOS Morse code program from the HAM listed below. ��It is called PCCW and I can highly recommend it. He developed it himself and as far as i can tell there are NO bugs. It cost $20 and he ��will send a demo version (partial alphabet) for a few dollars. His name

If that is indeed the case, then how come all the morons on the HF bands?

Obviously they had to take the Code Test, and most of them are old enough
to have taken the "real" written tests.

How do you explain that?

This is discussed in the April 1995 issue of QST, around page 35.
You can cure it by wrapping the AC cord around a piece of ferrite
that forms a common mode choke.

ARLB046 Hams help at site

Hams provide emergency communication at Oklahoma blast site

Within minutes of the deadly explosion at the Oklahoma City federal office building, Amateur Radio operators set up an emergency coordination network that has been in non-stop operation since April 19.

According to updates from Thomas Webb, WA9AFM/5, during the first few hours after the blast, telephone circuits were jammed and often inoperative. Amateur Radio provided vital emergency communications to rescue and relief organizations until regular telephone service was restored. Located at the Salvation Army Emergency Coordination Center, a net control station coordinated the efforts of more than 20 Amateur Radio stations in downtown Oklahoma City.

Volunteer operators were assigned to the five Salvation Army canteens, the Salvation Army Area Headquarters, the Red Cross Command Post, and the primary search and rescue command post. Using hand-held and mobile radio equipment, hams provided relief workers with reliable, mobile emergency communication for more than 190 continuous hours. Besides coordinating the distribution of supplies, food, water and equipment, the volunteer hams also drove vital supplies to locations in the disaster area.

During early relief efforts, technical skills of volunteer hams were put to the test when it was determined the buildings in the downtown area were blocking radio signals. A mobile repeater station was established at a Salvation Army canteen, allowing for communications to be sent and received easily.

In addition to providing communications to rescue workers, hams at the Salvation Army Emergency Coordination Center continue to process health and welfare inquiries from friends and relatives outside the

Oklahoma City area.

More than 100 hams have participated in relief efforts, with between 60 and 80 hams working at any one time. Most of the ham volunteers are from the Oklahoma City area, but offers of assistance have come from all over Oklahoma as well as Texas, Arkansas and Kansas.

DX Bulletin 21 ARLD021
From ARRL Headquarters
Newington CT April 27, 1995
To all radio amateurs

SB DX ARL ARLD021
ARLD021 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, and the QST Contest Corral column. Thanks to all.

SRI LANKA, 4S. Mario, 4S7/HB9BRM, will probably cease operations by the time this bulletin makes its way to the air. QSL via HB9BRM. 4S7DA was heard on 14235 kHz around 0145z. QSL via W3HNK. 4S7WP was active on 20 meters CW around 0100z and 1615z. QSL via Shanthi Perera, Box 80, Colombo, Sri Lanka.

MAYOTTE, FH. Adriano, IK2GNW, will operate from here 2 or 3 days before his Comoros stint, scheduled to start April 30. QSL via IK2GNW.

COMOROS ISLAND, D6. Adriano, IK2GNW, will be active in the ARI International DX Contest, May 6 and 7, as well as the week before the contest. Adriano will operate mainly SSB on 160, 80 and 40 meters. QSL via IK2GNW.

NAVASSA, KP1. The Navassa DXpedition scheduled for late April is postponed until the last week of May due to transportation difficulties. Al, WA3YVN, of South Georgia fame, joins the team to resolve the transportation problem. He may go with the rest to Navassa.

SPRATLY ISLAND, DU0K. This DXpedition was cancelled at the request of the Philippine military.

GLORIOSO ISLAND, FR/G. FR5HG/E, who has since probably gone QRT from Europa, was heard on 40 meters one morning saying he will return to Glorioso in about 4 months.

SOLOMON ISLANDS, H44. JA1OEM will sign portable H44 April 25 to May 8. Activity will be on all HF bands with CW and SSB. QSL via CBA.

LEBANON, OD. Zanek, SP7LSE, will probably be active for one year, most likely as OD5/SP7LSE.

ANDAMAN ISLANDS, VU7. VU2AU was worked April 21 at about 0200z. VU2JPS is also there and operates mainly CW.

CRETE, SV9. HA0HW, HA0ET and HA0DU plan to be on 160 through 10 meters signing SV9/their home calls from May 9 to 16. HA0ET will operate RTTY and AmTOR, while the other ops handle CW and SSB QSO's. QSL all three via HA0HW.

SAIL ROCK, ITALY, IL6. Prefix hunters will be interested in the operation planned by Victor, IK4CIE, slated for April 30 and May 1. Listen for IL6/IK4CIE, IL6/IK4IDW, IL6/I4VJC and IL6/IK4XQM using a prefix never before used. Four stations will be on 80, 40 and 20 meters.

NETHERLANDS, PA. During the month of May, 27 stations will use the prefix PI45, more quarry for prefix hunters.

CORRECTIONS. In last week's bulletin, Jim, AD1C, was credited with the news item on the pirate signing XU7VK and XU95HA. The correct news source was Dave, TI5RLI. Sorry Jim, thanks Dave.

Tom, AL7EL, reports having inadvertently supplied the wrong dates for his upcoming DXpedition to Wake Island. The correct dates are May 17 to 24. Thanks Tom.

THIS WEEKEND ON THE RADIO. The Helvetia Contest, sponsored by USKA of Switzerland, is from 1300z April 29 to 1300z April 30, on CW and SSB. Exchange signal report and three digit QSO number. Swiss amateurs will also send a two letter canton abbreviation. See page 124 of March QST for more info.

I beg to differ. Have you tried to operate in the novice CW bands anytime
lately? The side bands from the broadcasters trash wide portions of the
CW bands as well, especially when they are playing music.

On Saturday I am flying by single engine private aircraft (Mooney 231) from Westchester County Airport in White Plains, NY to Dayton for the hamfest and returning Saturday night. I have 1 available seat if someone is interested in sharing gas costs for the day (around $50 round trip). I have been flying for 30 years and have made this trip many times before. My co-pilot has more flight experience than I do. The trip will take about 3 hours flying time each way. We are planning on leaving around 6:00 am and arriving home around 11:00pm. Anyone interested should weight no more than 180 lbs and be able to get to the Westchester County Airport by our planned departure time.

If interested please e-mail me at: rsr@cloud9.net

: Not true. I can reach a cell from any peak or ridge in Colorado, and many

I'm sorry, but I think this statement is worded a bit too strongly.
I've been on a few ridges of 14'ers where cell phones have not worked
and HT's have. In SW Colorado, neither cell nor 2M would work unless
you were very high, and 2M definitely worked first (we had both). I do
believe that cell would work from any 14'er peak in Colorado, but
certainly not "any peak or ridge", even if you limited the altitude to
>13K. Down in SW Colorado, 2M was mostly unusable also. No repeaters
in most of the mountains down there. Even back on Cameron pass, 60
miles west of the Fort Collins urban area, cell is mostly useless (a
friend has used it on one of the higher peaks in the area, though). 2M
ham is a much better bet for general emergency use, although not a sure
bet.

Cell phone propagation is much more limited than 2M, mostly on purpose.
Frequency reuse is how cell systems increase capacity. The higher
frequency used is much more nearly "line-of-sight only" than 2M. 2M
works better in the mountains, other things being equal. 6M would
probably work even better...

:
: of the valley areas. Cells will also expand in the future to probably cover
: all areas. Actually, this argument is moot because specific areas may or
: may not have cell or repeater coverage..

Very true. It's really pointless to argue which is better. They both
have their advantages. If I see an emergency and I have a cell phone,
I'd be more likely to use it if the "service" light is on. It's just
easier and emergency people understand it. But for coordination of lots
of people in a wide area under difficult conditions, so far ham
techniques seem to have the advantage. I do believe that, eventually,
reliable personal communications from virtually anywhere on earth will
be available and it won't be ham radio that does it. But it will be
expensive, at least at first...

Well, This might explain a lot! I have a '93 GMC Sub that has consistently
and intermittently generated fairly strong signals spread all over the
440 FM band. I can't say that I've ever done the simple things that Mr
Coyle has done. The problem is a signal that sounds like computer
noise (complex buzz with many overtones) that only occurs when the
ignition is on. It sometimes lasts for a few seconds, or 10 minutes.
It breaks squelch and drives me crazy since it's strong enough to
break squelch at full squelch setting. Hmmmm.... It has been
driving me mad. When you find out what the secret is, please pass
it along. In the meantime, I guess that I've gotta do the same
experiment and finally pin down my noise.

Yah, me too. Connecting directly to the battery makes no difference. Pulling the fuel pump fuse makes no difference. New cap, rotor, wires makes little difference. Now that it's Spring, I'm about to start putting bits of braid everywhere to improve the grounding - if it worked for one guy at HF, it couldn't hurt at 2m.

>
>Darrell, NR3Y
No 6 meters the 775DSP, the IC-706 has that and 2 meters at 10 watts all mode. The 706 is smaller than the Alinco.

: in the 60's the best.

If you don't like the cover, you can either rip off the cover or just paste a piece of plain brown grocery bag over the cover and use a crayon to scribble "qst" on the front. Personally, my only use of the cover of a magazine is to know which magazine it is and what the issue date is. As long as it has those two pieces of information on it I don't care what else it says.

If I have to bitch and moan about "QST", it would be those annoying fold out inside and back covers. All they do is get in the way. The first thing I do when I receive my issue is to tear those buggers off and throw them away (the glossy laminated paper precludes recycling). I'm just glad QST hasn't resorted to those annoying postcards that litter other magazines. When the ARRL resorts to using those things, then I'll complain. And if I ever find my "QST" enclosed with one of those ubitquitous AOL diskettes that seem to find their way into every magazine in publication, then I'll raise hell.

1841. CW - weighted keying

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-27 00:00:00 UTC
From: djohnson@omni.voicenet.com
Message-ID: <djohnson.1149374172A@nova.voicenet.com>
Source record: 247646

Among the keyer options my new TS 850 offers are:

Weighted keying = as sending speed increases the ratio of dits to dahs decreases, that is dahs become shorter in relation to dits.

Unweighted keying = dits and dahs remain at a 1:3 ratio regardless of speed.

I've tried both and nobody seems to care much.

My sending isn't as accurate when the ratio remains constant, but I think that's probably a matter of not yet being comfortable with the new Vibroplex I bought in celebration. <grin>

Anybody have any preferences when copying QRQ? when sending?

How about unusual weightings - for example, 1:2.5 or 1:4? Somehow 1:3 seems so characterless, but the point is of course a fist that's easy to copy.

>two depending. Patience! and congratulations.
No, they do electronic filing for everyone. I did find out that my license has
been rejected in its current form. I was told by the FCC that was some kind of
mismatch on the forms and I am still considered a Tech Plus. I was told it
could be until the middle of the summer until I get my Advanced license.
The FCC sent the paperwork back to W5YI over a week ago and they don't seem
to have it. The FCC person on the 800# joked that it is was a good thing those
CSCE are good for a year.

I just bought an HTX-202, and I have what I think is a birdie on 176.06.
It was listed in a message I received from someone earlier.
Actually it was listed as an 'in band spur'. Is that the same?

Its a brand new unit - probably hasnt even been 30 days since I got it.

Is this a birdie and should I bring the unit back, or is this simply
normal and I have to put up with it?

X-Lines: 38
Status: RO

The current plan before congress is to discontinue HF WEFAX transmissions in Sept. or October of this year. They claim that they will save $500,000-yup, only $500,000 by doing this. Actually, the amount is around half of that, $250k has been going to a commercial station on the Gulf of Mexico, which was relaying the HF WEFAX signal for the gov. The commercial operation was slated to end on it's own this year, so the actual cost to operate the HF WEFAX sites in the US is around $250k/year. These signals, besides being of interest to us as listeners, are invaluable to mariners. We use them to predict weather and determine when to make a passage. Commercially, they are still used by some, although direct satellite transmission is becoming fairly common.

This information was taken from Ocean Navigator magazine, May, 1995 issue.

If you want a matching Tx, I've just seen an advert for a Breitling watch
with a built-in beacon on the distress air channel. There is what looks like a
little telescopic antenna that pulls out from next to the winder. Of course,
you shouldn't use this frequency.

>knowing Morse is not the factor which makes you a "real" ham.

Hans, two or three people thought that's what I meant, but even the original post included "homebrew" and "technical expertise" in my definition. These were meant as examples only, yet due to the responses, I later expanded on this to include additional aspects of the hobby. In no post have I stated that CW is required in order to be a "real ham", and I am the only person who has used that term in this thread.

You should know that it is my contention that the same logic used to justify removal of CW as a prerequisite to the license can be applied to *any* other requirement as well. On that basis, I believe that anyone who receives such a license is not a "real ham", regardless of the piece of paper issued by the FCC.

To make sure no one else misunderstands this, I suggest the following exercise:

1. Visit a local CB'er and ask to see his license.
2. Take a felt-tip pen and cross out "Citizens Band".
3. In its place, write "Amateur Radio".
4. Ask yourself if he's a "real ham"?
5. Ask yourself if he would be a "real ham" if the pen belonged to the FCC?

From: Gerald Schmitt <ggs@aerie.lanl.gov>
Message-ID: <3nodhs$23b@newshost.lanl.gov>
Source record: 247660

Clint,

I originally posted that question as part of a larger post addressing the issue of who produces the HTX-212. The subject I was trying to address was the incredible leaps of faith that Radio Shack fans were willing to make.

The first of these was "Look what the hams at Radio Shack and Morotola have brought you." The truth is more like look what the marketing folks at Radio Shack and Maxon have brought you. I think the Zealots are leading new comers up the garden path.

Perhaps, because availability and simplicity, some of the Radio Shack equipment may by appropriate for new ham but it still is not that special. It is OK but not outstanding and unless it is on sale it is way over priced for what it is. But these are not the issues.

The real issue is that it is not Motorola or land mobile quality equipment. No ham equipment is. There are very good economic reasons why a Motorola costs $1000.00 and a Radio Shack costs $200.00 and most of those reasons stem from the quality of parts and production.

The unrealistic attitude of some of the Radio Shack devotees yourself included prompted this question and I do think it is a valid point.

If any one reading this perceives that I have said "All Radio Shack equipment is crap" please read it again before sending or posting stupid hate messages.

You're not along in thinking that varying the weighting of CW elements
means varying the ratio of the dots to the dashes. If you're allowed
weight adjustment in a keyer in a commercial transceiver, this is the
ratio they let you adjust--and they're wrong.

That the ratio of dots to dashes varies with weighting changes is an
indirect effect of changing weighting. What changing the weighting
is *supposed* to do is vary the relative ratio of both elements *to
the spaces between them*. Heavier weighting means shorter spaces
between the elements; lighter, the opposite.

Somehow or other, however, the idea that weight adjustment means
merely varying the dot-to-dash ratio got coded into silicon, and now
we can hear the result.

You're darned tootin' that such "weighings" other than 1:3 sound
weird!

In article <phb.798924621@melpar>, phb@syseng1.melpar.esys.com (Paul H. Bock) says:
>
> Actually, the entire transmission ran about 15 minutes (I copied the
>machine-sent version on 5870 kHz which was sent at about 18 WPM; I understand
>that one other frequency (maybe more) was hand-sent by TC3 Morales at about
>22 WPM and had a slightly different text (a word here and there, etc.).
>

By the way, TC3 Sergio Morales is KP4FFW, a member of the Chesapeake (VA)
Amateur Radio Service, and did indeed send the final COGARDCAMSLANT CW
message by hand. A few of our members were privileged enough to be
present to witness the sad event, and to say that we're proud of
Sergio's performance would be a gross understatement. As it happens,
he's also a crack CW instructor for our Novice classes, and one fine
operator...

The Coast Guard is trying to get Sergio to donate the key he used to
them, although some of us have suggested that he will it to the
Smithsonian. Understandably, he's rather attached to that key, and
has no immediate plans to give it up.

Yeah, the problem with today's technology--SMDs, ferrites, stuff made
of plastic--is it's too darn light. Nothing like a 2-henry, 60-Hz
choke to keep that magazine where it belongs. :-)

>>investigation.

Gosh, Gary, if it said the purpose of Amateur Radio was
"self-training, intercommunication *or* technical investigation" it
would mean that only one of the three were allowed. The "and" doesn't
mean that all individuals must participate in all three facets of the
service. That's a gross distortion of both the ITU intent and the
English language.

>I believe anyone who has no
>interest in the world "behind the faceplate" is indeed on the wrong
>bus, and to the extent that our test revisions encourage this approach
>they do a disservice to our hobby.

But why only circuits, Mike? Aren't the other aspects of radio part of
the mix too? Isn't someone who, for example, devlops skills in
handling emergency communication also learning about radio
communication?

In any case, I don't think the tests today do encourage that approach.
At least, no more so than the tests of yesteryear. I took all of the
exams between the years 1968 and 1980. None of the exams then were any
harder than the exams now. And hams in 1968 didn't know any more than
they do now, either. By and large, they knew enough to participate in
those activities that interested them--as they still do.

Personally, I'm a techno-weenie. I have very little interest in DXing,
contesting, ragchewing, traffic handling or what-have-you. But you
know what? The fact that a lot of hams are in it for those activities
has never made my participation in *my* preferred activities one bit
harder. So what I don't understand about these discussions is, why
can't we each just do our own thing (how 70's!) and let other people
do theirs without trying to belittle them?

The Good Times email virus is a hoax!
If anyone repeats the hoax, please show them the FAQ.

G o o d T i m e s V i r u s H o a x

F r e q u e n t l y A s k e d Q u e s t i o n s

by Les Jones
macfaq@aol.com
lesjones@usit.net

April 27, 1995

This information can be freely reproduced in any medium,
as long as the information is unmodified.

Is the Good Times email virus a hoax?

Yes. It's a hoax.

America Online, government computer security agencies, and makers
of anti-virus software have declared Good Times a hoax. See Online
References at the end of the FAQ.

Since the hoax began in December of 1994, no copy of the alleged
virus has ever been found, nor has there been a single verified
case of a viral attack.

Why should I believe the FAQ instead of the hoax?

Unlike the warnings that have been passed around, the FAQ is signed
and dated. I've included my email address, and the email addresses
of contributors, for verification. I've also provided online
references at the end of the FAQ so that you can confirm this
information for yourself.

I'm new to the Internet. What is the Good Times virus hoax?

The story is that a virus called Good Times is being carried by
email. Just reading a message with "Good Times" in the subject line

will erase your hard drive, or even destroy your computer's processor. Needless to say, it's a hoax, but a lot of people believed it.

The original message ended with instructions to "Forward this to all your friends," and many people did just that. Warnings about Good Times have been widely distributed on mailing lists, Usenet newsgroups, and message boards.

The original hoax started in early December, 1994. It sprang up again in March of 1995. IIn mid-April, a new version of the hoax that mentioned a (long since retracted) FCC report began circulating. Worried that Good Times would never go away, I decided to write the FAQ and a separate report that chronicles the hoax's history.

What is the effect of the hoax?

For those who already know it's a hoax, it's a nuisance to read the repeated warnings. For people who don't know any better, it causes needless concern and lost productivity.

The virus hoax infects mailing lists, bulletin boards, and Usenet newsgroups. Worried system administrators needlessly worry their employees by posting dire warnings. The hoax is not limited to the United States. It has appeared in several English-speaking countries.

Adam J Kightley (adamjk@cogs.susx.ac.uk) said, "The cases of 'infection' I came across all tended to result from the message getting into the hands of senior non-computing personnel. Those with the ability and authority to spread it widely, without the knowledge to spot its nonsensical content."

Some of the companies that have reportedly fallen for the hoax include AT&T, CitiBank, NBC, Hughes Aircraft, Texas Instruments, and dozens or hundreds of others. There have been outbreaks at numerous colleges.

The U.S. government has not been immune. Some of the government agencies that have reportedly fallen victim to the hoax include the Department of Defense, the FCC, NASA. I've confirmed outbreaks at the Department of Health and Human Services, though they had the good sense to question the hoax, and ask for more information on Usenet.

The virus hoax has occasionally escaped into the popular media. ez018982@betty.ucdavis.edu reports that on April 4, 1995, during the Tom Sullivan show on KFBK 1530 AM radio in Sacramento, California, a police officer warned listeners not to read email labeled "Good Times", and to report the sender to the police. I've

called Business Media Services (916-453-8802) and ordered a tape of the show. .WAV at 11:00.

There are scattered reports of the virus spreading via Faxnet, that low-tech network of secretaries and bored knowledge workers that traffics in cartoons and dumb blonde jokes. I don't have any of these faxes, so if you have one, email me and I'll give you my fax number.

What was the CIAC bulletin?

On December 6, 1994, the U.S. Department of Energy's CIAC (Computer Incident Advisory Capability) issued a bulletin declaring the Good Times virus a hoax and an urban legend. The bulletin was widely quoted as an antidote to the hoax. The original document can be found at the address in Online References at the end of the FAQ. Note that the document went through several minor revisions, with 94-04c of December 8 being the most recent.

Like all quoted material in the FAQ, it includes the original spelling and punctuation. Because some of the lines in the CIAC report are rather long, they will appear broken.

----Begin quoted material----
THE "Good Times" VIRUS IS AN URBAN LEGEND

In the early part of December, CIAC started to receive information requests about a supposed "virus" which could be contracted via America OnLine, simply by reading a message.

| Here is some important information. Beware of a file called Goodtimes. |
|
|
| Happy Chanukah everyone, and be careful out there. There is a virus on |
| America Online being sent by E-Mail. If you get anything called "Good |
| Times", DON'T read it or download it. It is a virus that will erase your |
| hard drive. Forward this to all your friends. It may help them a lot. |

THIS IS A HOAX. Upon investigation, CIAC has determined that this message originated from both a user of America Online and a student at a university at approximately the same time, and it was meant to be a hoax.

CIAC has also seen other variations of this hoax, the main one is that any electronic mail message with the subject line of "xxx-1" will infect your computer.

This rumor has been spreading very widely. This spread is due mainly to the fact that many people have seen a message with "Good Times" in the header. They delete the message without reading it, thus believing that they have saved themselves from being attacked. These first-hand reports give a false sense of credibility to the alert message.

There has been one confirmation of a person who received a message with "xxx-1" in the header, but an empty message body. Then, (in a panic, because he had heard the alert), he checked his PC for viruses (the first time he checked his machine in months) and found a pre-existing virus on his machine. He incorrectly came to the conclusion that the E-mail message gave him the virus (this particular virus could NOT POSSIBLY have spread via an E-mail message). This person then spread his alert.

As of this date, there are no known viruses which can infect merely through reading a mail message. For a virus to spread some program must be executed. Reading a mail message does not execute the mail message. Yes, Trojans have been found as executable attachments to mail messages, the most notorious being the IBM VM Christmas Card Trojan of 1987, also the TERM MODULE Worm (reference CIAC Bulletin B-7) and the GAME2 MODULE Worm (CIAC Bulletin B-12). But this is not the case for this particular "virus" alert.

If you encounter this message being distributed on any mailing lists, simply ignore it or send a follow-up message stating that this is a false rumor.

Karyn Pichnarczyk
CIAC Team
ciac@llnl.gov

----End quoted material----

Note: Karyn is now with Cisco. Her new email address is karyn@cisco.com.

What are some early versions of the warning (Protos)?

I have an early version of the hoax that dates back to November 15, 1994, when it was posted to the TECH-LAW mailing list. This is currently the earliest known example of Good Times. See also "When did the hoax start?"

---Begin quoted material----

FYI, a file, going under the name "Good Times" is being sent to some Internet users who subscribe to on-line services (Compuserve,

Prodigy and America On Line). If you should receive this file, do not download it! Delete it immediately. I understand that there is a virus included in that file, which if downloaded to your personal computer, will ruin all of your files.

----End quoted material----

Here's another version that was circulated among a few AOL members on November 18:

---Begin quoted material---

Somebody is sending e-mail under the title "good times". If you get anything like this, DON'T DOWNLOAD THE FILE! ! ! ! ! ! ! ! ! ! It has a virus that rewrites your hard drive, and you lose anything on your hard drive. Please be careful and forward this mail to anyone you care about, I have!

----End quoted material---

One person remembers seeing Good Times as far back as April or May of 1994, but there is no supporting evidence for that claim. For now, the FYI message qualifies as the earliest prototype of Good Times.

What did the first major warning (Happy Chanukah) say?

This is the canonical original message as I received it on December 2, 1994, and as it was quoted in the CIAC report. The message that sparked the Good Times panic. Note, however, that it is not the earliest version of the hoax (see "When did the hoax start").

----Begin quoted material----

Here is some important information. Beware of a file called Goodtimes.

Happy Chanukah everyone, and be careful out there.There is a virus on America Online being sent by E-Mail. If you get anything called "Good Times", DON'T read it or download it. It is a virus that will erase your hard drive. Forward this to all your friends. It may help them a lot.

----End quoted material----

What's the other major warning (ASCII)?

The "happy Chanukah" greeting in the original message dates it, so more recent hoax eruptions have used a different message. The one below can be identified because it claims that simply loading Good Times into the computer's ASCII buffer can activate the virus, so I

call it ASCII.

Karyn Pichnarczyk (karyn@cisco.com) remembers the ASCII message from the original hoax in December of 1994, though I never saw it. Mikko Hypponen (Mikko.Hypponen@datafellows.fi) sent me a copy of this warning that dates back to December 2, 1994. The Infinite Loop variety of ASCII is now the basis for the most common warnings.

----Begin quoted material----

Thought you might like to know...

Apparently , a new computer virus has been engineered by a user of America Online that is unparalleled in its destructive capability. Other, more well-known viruses such as Stoned, Airwolf, and Michaelangelo pale in comparison to the prospects of this newest creation by a warped mentality.

What makes this virus so terrifying is the fact that no program needs to be exchanged for a new computer to be infected. It can be spread through the existing e-mail systems of the InterNet.

Luckily, there is one sure means of detecting what is now known as the "Good Times" virus. It always travels to new computers the same way - in a text e-mail message with the subject line reading simply "Good Times". Avoiding infection is easy once the file has been received - not reading it. The act of loading the file into the mail server's ASCII buffer causes the "Good Times" mainline program to initialize and execute.

The program is highly intelligent - it will send copies of itself to everyone whose e-mail address is contained in a received-mail file or a sent-mail file, if it can find one. It will then proceed to trash the computer it is running on.

The bottom line here is - if you receive a file with the subject line "Good TImes", delete it immediately! Do not read it! Rest assured that whoever's name was on the "From:" line was surely struck by the virus. Warn your friends and local system users of this newest threat to the InterNet! It could save them a lot of time and money.

----End quoted material---

What's the popular variation on ASCII (FCC or Infinite Loop)?

You rarely see the pure ASCII version any more. One common variation mentions an FCC memo, and claims that Good Times can destroy a computer's processor by placing the processor in a "nth-complexity infinite binary loop," which is a fancy-sounding bit of science fiction. This is by far the most common version nowadays, and consists of ASCII with the following additional

material:

----Begin quoted material----

The FCC released a warning last Wednesday concerning a matter of major importance to any regular user of the InterNet. Apparently, a new computer virus has been engineered by a user of America Online that is unparalleled in its destructive capability. Other, more well-known viruses such as Stoned, Airwolf, and Michaelangelo pale in comparison to the prospects of this newest creation by a warped mentality.

What makes this virus so terrifying, said the FCC, is the fact that no program needs to be exchanged for a new computer to be infected. It can be spread through the existing e-mail systems of the InterNet. Once a computer is infected, one of several things can happen. If the computer contains a hard drive, that will most likely be destroyed. If the program is not stopped, the computer's processor will be placed in an nth-complexity infinite binary loop - which can severely damage the processor if left running that way too long. Unfortunately, most novice computer users will not realize what is happening until it is far too late.

----End quoted material---

Exactly when did the hoax start?

I thought I knew, but new evidence has come to light. In the original FAQ, I wrote the following paragraphs :

December 2, 1994 is often quoted as the beginning of the hoax, but some of the AOL forward message headers in the copy I received put the date at December 1. One non-AOL header is dated November 29, though that date could easily have been forged.

Also, notice the text of the original message as it was sent to me, and quoted in the CIAC report:

Here is some important information. Beware of a file called Goodtimes.

Happy Chanukah everyone, and be careful out there.There is a virus on America Online being sent by E-Mail. If you get anything called "Good Times", DON'T read it or download it. It is a virus that will erase your hard drive. Forward this to all your friends. It may help them a lot.

The first paragraph suggests that someone was forwarding the information in the second paragraph. A seasonal greeting like "Happy Chanukah" is almost never placed in the second paragraph of a letter, suggesting even more strongly that this message was

repeating information from someone else.

After reading the FAQ, several people reported earlier instances of the hoax. On November 15, 1994, Rich Lavoie (lavoie@cwt.com) posted it to the TECH-LAW mailing list. Rodney Knight (r.j.knight@rl.ac.uk) saw that message on a newsgroup, and forwarded the warning to the POSTCARD mailing list. November 15 is currently the earliest confirmed sighting.

Anthony Altieri (magneto@epix.net) recollected the hoax as far back as April or May of 1994, but that recollection is so far unsubstantiated by any evidence.

Who started the hoax?

No one knows who started the original hoax. You'll meet people who think they know who started it, or where it started. They are mis-informed. Show them the FAQ. They're just repeating second hand information. The truth is, no one knows who started Good Times. I discuss this further in my report.

Now that new outbreaks of the hoax have begun, it's not especially important who spreads the rumors. Most people who pass on the warnings aren't aware that it's hoax. We're better off spending our time educating new Internet users, and distributing the FAQ whenever Good Times erupts.

Asking who started the hoax assumes that someone consciously started the hoax. It's possible that Good Times is a highly distorted report of some real or semi-real event. After being told and retold, the story became the Good Times hoax as we know it. The Telephone Game gone mad.

How do you know all this stuff?

I investigated the original hoax in December of 1994. I'll disclose the full details in my report.

When will your report be ready, Les?

Soon. I'm working on a complete history of the hoax. It promises to be good reading. The report provides a detailed history of events and public opinion. It also suggests a way to counter hoaxes and other thought viruses, and recounts my discovery of the NVP Trojan horse. When it's finished, it will be freely distributable, and will be available from my ftp site at usit.net in the pub/lesjones

directory.

Is an email virus possible?

The short answer is no, not the way Good Times was described.

The longer answer is that this is a difficult question that's open to nitpicking. Keep three things in mind when considering the question:

*A virus is computer specific. IBM PC viruses don't affect Macintoshes, and vice versa. That greatly limits the destructive power of viruses. (And notice that none of the Good Times warnings mention which types of computers are affected.)
*A virus, by definition, can't exist by itself. It must infect an executable program. To transmit a virus by email, someone would have to infect a file and attach the file to the email message. To activate the virus, you would have to download and decode the file attachment, then run the infected program. In that situation, the email message is just a carrier for an infected file, just like a floppy disk carrying an infected file.
*Some of the situations that people have dreamed up involve Trojan horses rather than viruses. A virus can only exist inside another program, which then automatically infects other programs. A Trojan horse is a program that pretends to do something useful, but instead does something nefarious. Trojans aren't infectious, so they're much less common than viruses.

There are some email programs that can be set to automatically download a file attachment, decode it, and execute the file attachment. If you use such a program, you would be well advised to disable the option to automatically execute file attachments.

You should, of course, be wary of any file attachments a stranger sends you. At the least, you should check such file attachments for viruses before running them.

How can I protect myself from viruses in general?

Use a virus checker regularly. Freeware, shareware, and commercial anti-virus programs are widely available. Which program you use isn't as important as how you use it. Most people get into trouble because they never bother to check their computer for viruses.

Most viruses spread through floppy disks, so isolating yourself from online services and the Internet will not protect you from viruses. In fact, you're probably safer if you're online, simply because you'll have access to anti-viral software and information.

Where can I find anti-viral information on the Internet?

Usenet newsgroups

---
comp.virus -- the Usenet gateway for VIRUS-L (below)

Mailing lists

VIRUS-L is for discussions of viruses and anti-viral products. Send email to listserv@lehigh.edu. In the body of the message, include the line "sub virus-l your-name" (without the quotes).

FTP sites

---
cert.org in pub/virus-l/docs/

Contains information about viruses and anti-virus products, with pointers to other FTP sites.

World Wide Web

---
http://www.singnet.com.sg/staff/lorna/Virus
(Note: the V must be capitalized!)

Was the hoax a sort of virus itself?

Yes, but it wasn't a computer virus. It was more like a social virus or a thought virus.

When someone on alt.folklore.urban asked if the virus was for real, Clay Shirky (clays@panix.com) answered:

"Its for real. Its an opportunistic self-replicating email virus which tricks its host into replicating it, sometimes adding as many as 200,000 copies at a go. It works by finding hosts with defective parsing apparatus which prevents them from understanding that a piece of email which says there is an email virus and then asking them to remail the message to all their friends is the virus itself."

Shirky eloquently described what a lot of people were thinking. So what is a virus? To a biologist, a virus is a snippet of genetic material that must infect a host organism to survive and reproduce. To be contagious, a virus usually carries instructions that cause the host to engage in certain pathological activities (such as sneezing and coughing) that spread the infection to other organisms.

To a computer programmer, a virus is a snippet of computer code that must infect a host program to spread. To be contagious, a computer virus usually causes the host program to engage in certain

pathological activities that spread the infection to other programs

From this perspective, it's easy to see the Good Times hoax as a sort of thought virus. To be contagious, a thought virus causes the host to engage in certain pathological activities that spread the infection.

In the case of Good Times, the original strain (happy Chanukah) explicitly told people to "forward this to all your friends." The other major viral strain (infinite loop) encourages people to "Please be careful and forward this mail to anyone you care about," and "Warn your friends and local system users of this newest threat to the InterNet!"

Likewise, the stories of an FCC modem tax encourage people to tell their friends and post the warning on other BBSes. David Rhodes' Make Money Fast scam instructs people to re-post the message to as many as ten bulletin boards.

In _The Selfish Gene_ (1976, University of Oxford Press), Oxford evolutionary biologist Richard Dawkins extends the principles in his book from biology to human culture. To make the transition, Dawkins proposes a cultural replicator analogous to genes. He calls these replicators memes:

"Examples of memes are tunes, ideas, catch-phrases, clothes fashions, ways of making pots or of building arches. Just as genes propagate themselves in the gene pool by leaping from body to body via sperm or eggs, so memes propagate themselves in the meme pool by leaping from brain to brain via a process which, in the broad sense, can be called imitation. ... As my colleague N. K. Humphrey neatly summed up an earlier draft of this chapter: "...memes should be regarded as living structures, not just metaphorically, but technically. When you plant a fertile meme in my mind you literally parasitize my brain, turning it into a vehicle for the meme's propagation in just the way that a virus may parasitize the genetic mechanism of a host cell.""

Amazingly, when I read alt.folklore.computers looking for research material, two people had already mentioned Dawkins' memes. One of them referred to an article in the April 8, 1995 _New Scientist_ about something called the Meme Research Group. (The article erroneously stated that the group is at the University of California, San Francisco. In fact, they are at Simon Fraser University in British Columbia.)

The Meme Research Group is collecting chain letters to analyse them. The more copies they get, the more information they have to analyze. Send those unwanted chain letters to meme@scottlabsgi.chem.sfu.ca.

I am not a memeticist, and a real memeticist might take umbrage at my explanation of the concept. To learn more, visit the

alt.memetics newsgroup on Usenet, and especially the alt.memetics home page on the World Wide Web (http://www.xs4all.nl/~hingh/alt.memetics/). Though we've talked about memes in terms of viruses (a common analogy), the concept of a meme is neither good nor bad. The idea of "Do unto others as you would have them do unto you" is as much a meme as the Good Times hoax.

What's the best way to control a thought virus?

Create a counter virus like this one as an antidote. To make the counter virus contagious, include instructions such as, "The Good Times email virus is a hoax. If anyone repeats the hoax, please show them the FAQ."

What are some other hoaxes and urban legends on the Internet?

The FCC Modem Tax

Every so often someone posts a dire warning that the FCC is considering a tax on modems and online services. The warning encourages you to tell your friends so they can take political action. It's a hoax. It's been going on for the five years I've been online, and probably much longer. If you'll notice, the warnings don't include a date or a bill number.

Make Money Fast

If you haven't seen a Make Money Fast message, call your local anthropology department. They might be interested in studying you. Devised by David Rhodes in 1987 or 1988, Make Money Fast (sometimes distributed on BBSes as a file called fastcash.txt) is an electronic version of a chain letter pyramid scheme. You're supposed to send money to the ten people on the list, then add your name to the list and repost the chain letter, committing federal wire fraud in the process. Posting a Make Money Fast message is one sure way to lose your Internet account. (Information from the Make Money Fast FAQ by ewl@panix.com.)

Craig Shergold needs your get well cards

Craig Shergold is a UK resident who was dying of cancer. He wanted to get in the Guinness Book of World Records for having received the most get well cards. When people heard of the poor boy's wish, they began sending him postcards. And they kept sending him postcards, and never stopped. Shergold is now in full remission. He was listed in the Guinness Book of World Records in 1991. He really does not want your postcards any more, and neither does his hometown post office.

These are just the urban legends that you're likely to encounter on the Internet. There are many more in real life that you probably believe. I won't give them away, but here are some clues: peanut butter, Neiman Marcus/Mrs. Fields, Rod Stewart, and the Newlywed Game. For more information, read the alt.folklore.urban FAQ, listed in Online References at the end of the FAQ.

1868. Heath UHF FM Transciever

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-27 00:00:00 UTC
From: brucem@eskimo.com
Message-ID: <D7pAyx.Mps@eskimo.com>
Source record: 247673

Anybody have any information on a Heath UHF FM Transceiver,
with the following numbers on the back:

"HW4 UHF FM Transceiver"
Serial No. 7yu 010095

My friend who has loaned this to me thinks it is a 440 device, but
he got it in trade and has no manual, so I'm looking any details that
might be available or even where to get a manual.

Thanks.

1869. IPS Daily Report - 27 April 95

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-27 00:00:00 UTC
From: rwc@ips.oz.au
Message-ID: <3np8j5$o52@flare.syd.ips.oz.au>
Source record: 247674
Cross-posted to: aus.radio,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 27/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 27 APRIL AND FORECAST FOR 28 APRIL - 30 APRIL

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 68/2

GOES satellite data for 26 Apr
Daily Proton Fluence >1 MeV: 4.2E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 3.9E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
28 Apr 29 Apr 30 Apr
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 28 Apr: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active-minor storm periods observed
during local night hours. Quiet to unsettled at other times.

Estimated Indices : A K Observed A Index 26 Apr
Learmonth 18 2354 3332
Fredericksburg 22 17
Planetary 28 16

Observed Kp for 26 Apr: 3433 3334
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
28 Apr 20 Active
29 Apr 20 Active
30 Apr 20 Active
COMMENT: Observed activity overnight was probably due to a
equatorial coronal hole currently just west of the centre of
the solar disk. This activity commenced earlier than expected.
Active conditions, with minor storm periods during local night

hours are expected over next three days.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Apr normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 Apr normal fair poor
29 Apr normal fair poor
30 Apr normal fair poor
COMMENT: Degraded HF comms are probable for high latitude circuits
over the next three days.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
27 Apr 34 enhanced 10-20% early in UT day then near predicted
monthly values.

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
28 Apr 30 About 15% above predicted monthly values
29 Apr 20 Near predicted monthly values
30 Apr 20 Near predicted monthly values
COMMENT: MUFs at Townsville were enhanced 10-15% early in UT day then
normal.Some mild spread F was observed during local night hous at
Townsville. MUFS at Hobart were near predicted monthly values, with
spread F observed throughout local night hours. Degraded HF comms
quality is expected over the next three days, predominately during
local night. Depressed MUFs are not expected (winter).

1870. Tricked (was: 2-meter ham vs cellular)

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-27 00:00:00 UTC
From: Mark_Nash@hp-loveland-om10.om.hp.com
Message-ID: <3np5ra$rd7@hpscit.sc.hp.com>
Source record: 247675

Ok, ok..... I FINALLY figured out why I was getting so much email from hams telling me how great 2m radios are. I didn't realize I was cross-posting to this group from rec.backcountry. This is quite a different audience. And, yes, I know there are backcountry/ham operators so don't bother telling me about it..

-Mark

P.S. Have fun on the radio!

> radios sell sometimes for the price of a new HT.
>
>
> 73, Moritz DL5UH

Here's my dilema:

I find myself using the HT mostly during drive time BUT I really
like having an HT for backpacking and wilderness canoeing.

I figure a nice no-frills 2m mobile would be about $300 minimum
and a good antenna another $40-60. I wouldn't need an amp.

I already have an HT but I'd need to spend another $150 for the
amp and better antenna to get mobile performance.

Now, I could probably sell my used HTX-202 with extra NiCd pack
and extended warranty (transferable) for around $200, invest another
$150 and get a sweet mobile setup...but then I'd have no portability.

I guess I ought to sell the HT, buy the mobile, and save up for
another HT. Geez, I'm deciding this as I write. Sanity check:
Is the added expense of upgrading to a mobile and later buying a new
HT worth it to avoid the performance hit of using an HT for mobile use?

^^^^^^^^^^^^^^^^^^^

Just be sure to limit YOUR input to 5 watts.
$99 seems fair, it works well for me, particularly the helical filter for
eliminating intermod when my H-T is connected to the amp (and the power
is on to the amp!).

The electronic application filing system now available to VEs is
currently only for new license applications. Minor changes, such as
address changes, still need to be done on a real FCC 610.

I wouldn't recommend replacing this with an American device. Any large audio/video repair center should have a Japanese Transistor Manual. If they don't have the exact number in stock, they should be able to sell you a suitable Japanese equiivalent.

BTW, the Japanese devices are very good, and very reliable.

I have been following with interest the discussion abot 2m vs cellular phones. It is an interesting discussion based on technical drawbacks and benefits.

One important thing however has escaped you. Radio hams, because they are involved in a hobby and because they end up making friends around the worlds easily, are just like a huge group of siblings. In our hobby, money doesnt talk. You cant just go and buy a license, can you.

Well this, lets call it brotherhood, is a big plus in meeting people no matter where we go and it sure pays off when we need help. If I am on a hike and need to access help, I would always try to get hold of someone on 2 meters, explain to the person whats going on and get him/her to help. In the process I have met someone new.

I mean think about this: when driving and you see a car with antennas, dont you try to find out whether the guy is a ham? dont you see if there is a bumper sticker with frequencies, so you can say hi. Would you care about someone using a cellphone. No way. But a ham is different.

I dont think there is any point in trying to argue benefits of cell vs ham, because the intangible benefits of hamming are so great, they are incomperable.

Well, Jeff, if the modern written tests are so easy, what is stopping you from prancing over to the next VE session there in Honolulu and scoring your Advanced ticket? Well, heck, the Extra must be a piece of cake, too, and you're a former USCG CW op, a *real* ham by your definition, so the 20 WPM is a piece of cake and the written tests are mere formalities.

Why aren't you an Extra? This really isn't meant as a personal attack; rather, you seem to criticize the licensing system strongly yet you haven't shown your own mastery of it. In other words, hearing you rattle on about dumbing down and such is like hearing someone that climbed halfway up a mountain talk about how easy it is to the summit.

Give it a thought; imagine this: all the licensing structure stays the same, except passing the Extra written entitles one to all HF privileges. Do you think chaos would ensue?

Why? Why not?

If you have a desire to use cellular, fine, do it ! I was simply trying
to illustrate that for many applications, where people use cellular for
emergency use (esp. around their home town), the original statement was
indeed correct.

As far as not being monitored, many repeaters I've seen in the Repeater Directory from ARRL offer an emergency and/or open autodial.

Again, if you perfer cellular, fine, but for my families application, 2m definately IS the better choice.

An interesting point....are there many 6M repeaters in the mountains?
Perhaps we should encourage people in that area to concentrate on 6M coverage.
Then again, there don't seem to be a whole lot of hams with 6M rigs.
I am not even sure I've ever *heard of* a 6M HT, though they no doubt exist.

> I do believe that, eventually, reliable personal communications from
> virtually anywhere on earth will be available and it won't be ham radio
> that does it. But it will be expensive, at least at first...

Right now it appears that Motorola's Iridium will be the first to
do that, and the price I heard quoted was $3/minute....but the satellite
coverage will be 100% of the globe. I am looking forward to making calls
from a sailboat in the middle of the Pacific. :-)

Evenings are definitely best for phone calls, since he works days, 8AM to 5PM.
And Fred will be at Dayton again this year as usual, driving down on Thursday and leaving late Sunday night.

Chrysler/Dodge/Eagle and I beg to differ. According to Chrysler's brochures, the Dodge Intrepid / Eagle Vision / Chrysler Concorde (LH chassis) are built at the Bramlea assembly plant in Ontario, aka VE3 land. You must be confusing the Vision with the Eagle Talon, which cross-references to a Mitsubishi Eclipse.

You might want to look again. My DVK project takes neither expensive equipment to build (all you need is a soldering iron, wire cutters,and a drill) nor years of experience. Ham radio *is* supposed to be a technical hobby. I see nothing wrong with talking on the radio (some people will disagree, but why build radios if you don't use them), but the ability to handle minimal schematics and construction is also an important part of the hobby.

If all you want are ads, look in the Ham Trader. If you want operating and contest info, try NCJ or CQ. I think QST has a reasonable mix of construction, operating, reviews, and ads.

>Bruce, WB4YUC, el YUCCO. . .

Well, since I was requested to write to the FCC, I was not going to do it anyway, because although I have a US callsign, I was being asked to write to the FCC in my capacity as a "foreign" ham.

As I am resident in the UK, the FCC has no jurisdiction over what I do as a radio amateur, and so I don't think that non-US stations should lobby the FCC over US rules and regulations - just as I don't like non-UK hams telling ME what I have to do as a radio amateur in the UK!

If I were in the US, of course, the FCC would be the people to take this matter to.

And it's not as if the FCC doesn't have any regulations to cover what K1MAN is doing. Of course it does, it's just that they are being brazenly and blatantly ignored.

Just as there are speed limits on the roads, and people ignore them - there are rules which govern how US hams should behave, and K1MAN (among others) is ignoring them.

BUT - and this is a big but - the radio amateur service in the United States and its possessions is supposed to be SELF-POLICING to a large degree, so if WE as radio hams (or YOU as US radio hams!) feel that someone is breaking the rules on a regular basis, then it is up to US (or YOU!) to do something about it. Unfortunately, radio amateurs are not endowed with any special powers to correct or punish the behaviour of one of their own that has "strayed".

And the end result of all this is that the only time the FCC hears from radio amateurs, it is when they want to know whether their license has been issued (which is fair enough, because they issue US hams with their callsigns), or to bicker about the (seemingly relatively unimportant) stupid behaviour of another radio ham.

SO WHAT CAN WE DO ABOUT IT? Or more to the point, what are YOU going to do about it? I would never suggest that we round up a posse and go a-lynching, and we are not "allowed" to do anything else about this, so all we can do is lobby THE NATIONAL SOCIETY, who really ought to have SOME policy on all this ...

So what will you do? I can't say, as I am currently living in the UK, using a British callsign. I am not (yet) an ARRL member, either. I suggest that you get in contact with the ARRL and ask them what you CAN do, if this really is a problem.

Best of 73,

Scott

I love throwing in my $.02 (or even a buck or two if it's a good discussion).

Speaking as a no code tech (or as I proudly call myself, a "tech minus"), I am also glad that Forrest is a ham. He doesn't sound like an idiot.

And Jack, I also support SOME form of code requirement to get HF privleges for a few reasons:

Code is an art. It's not the ONLY art in amateur radio, but is in an art. One of the things in the "Basis and Purpose" of amateur radio as defined in 97.1 is to promote interest in the art of communication. I don't believe that we should make all operators master ALL aspects of the hobby but 5 WPM is no big deal to show you have a grip on it. There really is no good reason to REQUIRE code if you remain above 30 MHz.

The U.S. is party to treaties that require HF hams to demonstrate the ability to receive (and send) morse code. But there isn't a speed requirement. A 5 WPM Extra Class would satisfy international law. But I don't have any heartache with 10 to 15 for expanded privleges. I do not by the "because then you EARNED it" reasons I hear some people talking about - that's like saying, "because it build character" or some other dumb cliche. When I joined the Air Force I figured getting all of my hair cut off was to "build character" - it just made my head cold.

We do need a service that hears those little sinking boats in the ocean calling for help. But we shouldn't make code speed the road block to getting people on HF bands. If I were looking for help (and for some strange reason only had CW at my disposal) I would rather reach someone that copied 5 to 10 WPM than not reach anyone at all. Hams are likely the only people left that copy code for free.

And I have a question... Why do we need SIX license classes? I wasn't ham very long before I decided three would cover the services needs. Does anybody have a good reason for it?

: Ads aren't a bad thing, are they? Like the photo magazines, many
: people probably read QST, at least partially, for the ads.

You know what really burns my butt about ads in QST? The vast majority have '$CALL$' as the price for darned near everything they sell. I hate that - I'd rather see a price that may be lower when I call than have to call in advance to choose my dealer. I've had one guy say one price and another a different price from the same place on the same day, both claiming to be the lowest price!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 28/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 28 APRIL AND FORECAST FOR 29 APRIL - 01 MAY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 68/2

GOES satellite data for 27 Apr
Daily Proton Fluence >1 MeV: 2.0E+06
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 3.4E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
29 Apr 30 Apr 01 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 29 Apr: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to active

Estimated Indices : A K Observed A Index 27 Apr
Learmonth 13 2234 4222
Fredericksburg 15 22
Planetary 15 24

Observed Kp for 27 Apr: 3364 3222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
29 Apr 20 Active
30 Apr 20 Active
01 May 10 Unsettled
COMMENT: IPS Geomagnetic Warning 12 was issued on 28 April and is
current for interval 28-30 April. Increased activity expected due to
coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
28 Apr normal normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
29 Apr normal fair poor
30 Apr normal fair poor
01 May normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
28 Apr 7 about 10% below predicted monthly values

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
29 Apr 15 Near predicted monthly values
30 Apr 15 Near predicted monthly values
01 May 15 Near predicted monthly values
COMMENT: MUFs at Townsville were near predicted monthly values.MUFS
at Hobart were 10-15% depressed 00-05UT, with spread F observed
throughout local night hours. Spread F was also observed at times
during local night at Sydney.

SB PROP @ ARL $ARLP019
ARLP019 Propagation de KT7H

ZCZC AP87
QST de W1AW
Propagation Forecast Bulletin 19 ARLP019
From Tad Cook, KT7H
Seattle, WA April 28, 1995
To all radio amateurs

SB PROP ARL ARLP019
ARLP019 Propagation de KT7H

Solar activity was down last week. Flux values averaged 11 points lower than the previous week, but the most significant number was the zero visible sunspots for the past 4 days.

The most unsettled geomagnetic activity was on April 23, when the A index was 23.

Solar flux is rising again, and should peak in the nineties around May 12 through 19. Disturbed conditions are forecast around May 4 and 20, with a very stable period between May 11 to 15.

Sunspot Numbers for April 20 through 26 were 36, 19, 14, 0, 0, 0 and 0, with a mean of 9.9. 10.7 cm flux was 86.4, 84.7, 83.9, 76.7, 72.5, 70.4 and 69.3, with a mean of 77.7.

The path projection for this week is to Andaman Island in the Indian Ocean from Portland, Oregon, Pittsburgh, Pennsylvania and Dallas, Texas.

From Portland, check 40 meters around 1200 to 1330z, and 30 meters from 1230 to 1500. 20 meters should be good most days from 1700 to 1830.

From Pittsburgh on many days 20 meters should be good from 0000 to 0130z.

From Dallas check 20 meters from 1300 to 1600z. On some days 17 meters could be open from 0000 to 0230.

>used that term in this thread.

I'd speculate that more than 2 or 3 people misundrstood you. You really seemed
to be saying "a ham without CW isn't really a ham". If that isn't what
you meant, I'm sorry for misunderstanding.

>You should know that it is my contention that the same logic used to
>justify removal of CW as a prerequisite to the license can be applied to
>*any* other requirement as well. On that basis, I believe that anyone
>who receives such a license is not a "real ham", regardless of the piece
>of paper issued by the FCC.

What does "such a license" mean? A license with no code requirement, or a
license with no requirements at all? This is totally vague. No wonder
at least 2 or 3 people are confused ;-).

>To make sure no one else misunderstands this, I suggest the following
>exercise:
>
> 1. Visit a local CB'er and ask to see his license.

Maybe you haven't looked at Part 95 since 1979 or so; CB licenses haven't
been issued since around then. I guess the rest of the example is
rather moot, then?

> 2. Take a felt-tip pen and cross out "Citizens Band".
> 3. In its place, write "Amateur Radio".
> 4. Ask yourself if he's a "real ham"?
> 5. Ask yourself if he would be a "real ham" if the pen belonged
> to the FCC?

Maybe you should invest in a current copy of Title 47 of the Code of Federal
Regulations, Parts 80-End. For $20, you'd have mostly current text of Parts

97 (amateur regs), 95 (CB and GMRS), 90 (Land Mobile), and several others. :-)

>harder than the exams now.

Will you admit that the General test (today's 2, 3A and 3B or 1968's
equivalent) is more difficult than the Novice or Tech test? Since the
General (written -- I'm not forgetting you original Techs) used to be
our lowest-level *permanent* exam, it's clear enough that the
examination to become a permanent ham *was* harder then than it is now.
(And, yes, I know it's only "permanent" if you renewed)

>Personally, I'm a techno-weenie. I have very little interest in DXing,
>contesting, ragchewing, traffic handling or what-have-you. But you
>know what? The fact that a lot of hams are in it for those activities

>harder. So what I don't understand about these discussions is, why
>can't we each just do our own thing (how 70's!) and let other people
>do theirs without trying to belittle them?

Once again, no discussion of standards seems to be allowed without
accusations of "belittling" bubbling forth. Based on Part 97.1, on our
testing and on our history, ham radio is a technical hobby on top of
whatever else it may be. For most of us that doesn't mean cutting-edge
exploration; what it *does* mean is learning something about the
physics and engineering employed in our equipment and the propagation
of our signals. I make no apologies for continuing to consider any ham

who has *no* interest in the technical side of the hobby to be little more than a slipup in our testing scheme.

Source record: 247591

Well, folks, if you don't like the W5YI proposal, consider filing comments
with the FCC. They won't read what you write here. Perhaps someone else
can explain the process here, but i bet they still pay attention to what
people say, even if it isn't exactly in the legalistic form. This may be
important to you if you take a position that differs from that of ARRL,
as that's what the Commission will likely assume unless you (or someone
else who claims to represent you) says otherwise.

However, i can no longer find references to this under 'http://www.fcc.gov',
and so i'm not sure what the status of this is. Can someone clarify where
we are with this?

Not to open another can of worms with regards to RS p[roducts, but I've noticed that the 2m amp is on sale for $99 locally. Is that a good price? Is it a good amp? All input is welcome.

It's a pretty new product Joe. I don't think that it has been out long enough yet to say whether it is a reliable amplifier. However:

o The specs look very good for the price.

o It has a receive filter to cut intermod and a preamp to compensate for the filter's insertion loss.

o RS is usually easier to deal with than a mail order house. (You can look through the manual before you buy. Warranty problems don't require cross-country shipping. Returns without restocking fees.)

o The service plan will protect you if any problems crop up years from now and it makes a good selling point if you decide to sell the amp.

I know a couple of folks that have them and they seem to be pleased but that's a VERY small sample set and is statistically insignificant.

If you're looking for an amplifier then I suggest you get the RS unit and the service plan too.

(Yes, I work part-time for Radio Shack but I will NOT compromise my integrity.)

1911. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-28 00:00:00 UTC
From: server@GRAFex.sbay.org
Message-ID: <gate.uNXa5c1w165w@GRAFex.sbay.org>
Source record: 247596
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
==========

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
==========

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order
UUDECODE.BAS or UUDECODE.C and UUEXE536.EXE. Compile on your

system then uudecode UUEXE536.EXE. This is a self-extracting archive of UUENCODE and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP (plus other stuff). Will dearchive PKUNZIPped files, as well as UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a utility, such as StuffIt to decode. There are also UUDECODErs and other de-archivers available. See the index for /hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==========

o If you are ordering from a ccmail system, be advised that ccmail in its default configuration attempts to automatically UUDECODE files. If your order is sent in parts, it will hiccup after the first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite regularly with messages. And, since the path is incorrect, I cannot contact you to let you know. Try the PING command to check that the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file for correct syntax.

o The file name has changed since the INDEX was generated. Order a new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post. Orders are only honored when sent to HAM-server@grafex.sbay.org. That's the way the software works.

YOUR HELP IS NEEDED:
==========

If you have a program you would like placed on HAM-server, you can email it uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I need to take care of quickly.

> decreases, that is dahs become shorter in relation to dits.

As mentioned in David Newkirk's post, changing the dit/dah ratio is not the same as changing the weighting. I have a Heath CW keyboard that does allow actual weight changes, and anything other than normal seems to make it more difficult to copy. I would expect the same is true of the dit/dah ratio.

Have fun with the new rig!

I called the 800 number more than once to find out my call sign when I
first got my Tech license, and the FCC kept telling me that my license
had not been approved, even after I saw my new callsign in the FCC
database itself. After giving them my name twice, and twice them telling
me that I was not approved, I told them that I found the callsign in their
database on the internet. They then asked for the callsign I saw, and they
confirmed that it was mine, and that I was approved. So they outright
lie to you on the phone. I for one, will not call that 800 number again
for info. I will go straight to the new ftp cite or the new telnet database.

>our lowest-level *permanent* exam, it's clear enough that the
>examination to become a permanent ham *was* harder then than it is now.
>(And, yes, I know it's only "permanent" if you renewed)

As I said, I got my first ticket in 1968, when the Novice had long
been available, so I can't speak from personal experience about what
the tests were like before there was a Novice license. Maybe the
required qualifications were higher then. But there seems to be the
same mix of ability and knowledge among hams of all eras.

>Once again, no discussion of standards seems to be allowed without
>accusations of "belittling" bubbling forth.

Standards are one thing; excluding people only because they don't
share your interests is another. What, exactly, does the presence in
ham radio of people who aren't interested in the technical side of the
hobby do to damage *your* participation?

> Based on Part 97.1, on our
>testing and on our history, ham radio is a technical hobby on top of
>whatever else it may be. For most of us that doesn't mean cutting-edge
>exploration; what it *does* mean is learning something about the
>physics and engineering employed in our equipment and the propagation
>of our signals. I make no apologies for continuing to consider any ham
>who has *no* interest in the technical side of the hobby to be little
>more than a slipup in our testing scheme.

Also based on Part 97.1 and our history, ham radio is an emergency
communications service. Does that mean, then, that any ham who isn't
interested in emergency communications is "a slipup in our testing
scheme?"

Now reread the previous paragraph replacing "emergency communications"
with "enhancing international goodwill." Does the logic still apply?
Ham radio has many facets, and it's ludicrous to expect that every
individual will participate in every area of the hobby. And if you are
going to pick one thing and demand that everyone participate in that,
why pick the technical area? Seems that emergency communication would
be the activity most likely to impact society as a whole.

What I want to require of all licensees is that they follow the rules
and don't unecessarily interfere with other stations--amateur or

otherwise. Beyond that, what they *do* in ham radio is none of my business. You might call this the "big tent" view of ham radio. Fortunately, it's a view to which the FCC subscribes. So, I believe, do most hams. I hope so, anyway.

>
<<snip>>

Try downloading the database overnight- I start a download at about 10pm and when I get into work thet morning, it's done (and I haven't pissed people off as much moving large files).

I wrote a couple of simple c programs to work with the database files- when you strip it down to call, class, name, address, birthday, I end up with a file that's 50mb in size. The index for doing binary searches (looking up callsigns) is another 8.3mb. If you want to do zip code retrieval, that index is also about 8mb.

Disk space is cheap- there's a company (NCA) advertising 540mb drives for $189-

For the processing I do, I need about 220mb free for about half an hour. Then I'm back to about 66mb for the 3 files.

Get together with some friends in your area and share the pain- if you do a simple combined format like I did, and share that, then one person needs to do the download and processing periodically- every few weeks.

73-

: business. You might call this the "big tent" view of ham radio.
: Fortunately, it's a view to which the FCC subscribes. So, I believe,
: do most hams. I hope so, anyway.

I'd just like to make one tiny, tiny point in passing, then I'll shut up.

During my career as a broadcast engineer, I observed two things:

Engineers at competing stations worked very hard to insure that their own facilities had the biggest, cleanest, most effective signals in the market. Accusing someone of technical sloppiness, often with recorded proof, was a _fun_ thing to do, and quite merciless.

In the event of serious trouble at a given facility, those same engineers would go to extraordinary lengths to help a competing station get back on the air, even to the extent of lending studio or transmitter equipment or components.

Times may have changed and this may no longer be as frequently the case, but my tiny, tiny point is this:

The bottom line for an engineer faced with a technical problem was how to fix the problem, not whose problem it was. The unifying factor was technical understanding and concern. Of course there were engineers who took pleasure in other folks' troubles, but there was never any question that such people were Assholes. Herschel's Law: All Assholes Eventually Get Wiped (Note the capitol 'A' in 'Assholes'; this is a technical term.)

Given all the different facets of the Amateur Service, and all the trouble many hams seem to have in sharing their only resource, one really has to ask just what is the unifying factor that is too often conspicuous by its absence: technical understanding and concern. QRM is a technical problem, with simple technical solutions. Jamming, squatting, repeater wars and other perversions of privilege indicate a criminal lack of technical competence, which competence could all by itself solve such problems as they occur, _if_ the concern of the individuals involved was actually technical and not something irrelevantly, and illegally, other.

Dynamic, cooperative use of radio spectrum is NOT rocket science, and is more fundamental to any radio Service than _any_ single mode, frequency, path, power or purpose.

Amateurs who fail to apply technical solutions to technical problems, when they've been explicitly licensed to do just that, are Assholes, regardless of other less useful skills they may actually or theoretically possess. Brown's Corollary: All Assholes _Should_ Be Wiped. Licensing exists, in part, to help insure that the resource being regulated (in this case, the radio spectrum) can be used efficiently and constructively by those so licensed, by being protected from misuse by those lacking the requisite knowledge and skill.

Obviously, no scheme of licensing can work if it is unenforced, but IMNSHO, any examination or licensing scheme which fails to emphasize and entrain the attitudes and skills of _technical_ problem solving seriously undermines the collective ability of the Amateur Service to peacefully coexist with _itself_, and substantially reduces its actual and perceived value to everyone, both in and out of the Service. Incompetence in the management of Amateur spectrum resources cannot be hidden, and, I feel sure, will not forever be tolerated by those who actually _do_ own the frequencies.

Cheers,
RF Buchanan

1926. GB2RS News 30th April 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-28 00:00:00 UTC
From: dave@llondel.demon.co.uk
Message-ID: <799114108snx@llondel.demon.co.uk>
Source record: 247611
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 30th of April and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

We start with the news that next weekend over fifty British special event stations are expected to be on the air to commemorate VE Day. The Council of the RSGB has agreed to support the issue of the special event prefix GR in remembrance of the 50th anniversary of the cessation of hostilities. The council felt strongly that the RSGB should support the issue of these callsigns not in an act of celebration, but in remembrance of all those who lost their lives, and to commemorate the start of peace. It should be noted that GR-prefix callsigns are not a general issue; rather they are an alternative to GB callsigns for bona fide stations commemorating the 50th anniversary of the end of the Second World War. A list of special event stations using GR or GB callsigns, as well as a number of stations in Europe commemorating the end of the Second World War, can be found on page 11 of the May edition of Radio Communication, which was posted to all RSGB members last Monday.

The Waterside Amateur Radio Society will operate a 'special event station with a difference' between the 6th and 8th of May - from on board the restored steamship 'Shieldhall', cruising in the Solent. The group will use the callsign GX4JYN/MM on HF and 2 metres FM. For further details call Bill Simmons on 01703 783170.

And the RSGB will be taking part in the massive Hyde Park VE Day celebrations on the 6th, 7th and 8th of May. The RSGB will be sharing a stand with the Air Training Corps, and representatives of the Society will be available to answer questions about amateur radio from the general public. Over one million people are expected to attend the event over the course of the three days.

There will be an exhibition of wartime equipment from all three services and a special event station at the Puckpool Park Wireless Museum, Seaview, Ryde, on the Isle of Wight, on Monday the 8th of May. Further details may be obtained from Douglas Byrne, G3KPO, on 01983 567665.

The Council of the RSGB has co-opted David Whalley, G4EIX, to fill the vacancy in Zone B, the Midlands, until the next election. His address is: 1 Lees Farm Drive, Madeley, Telford, Shropshire, postcode TF7 5SU; telephone 01 952 588 878.

The ARRL Awards Committee has accepted a DX Advisory Committee recommendation to add a minimum-size rule to point 2 of the DXCC

countries list criteria. To be eligible for consideration as a new DXCC country, an island must now be visible and named on a map or chart of a certain scale and must consist of "a single unbroken piece of land not less than 10,000 square feet in area, which is above water at high tide". Rocks which cannot sustain human habitation shall not be considered for DXCC status.

The British Red Cross will be running a special event station to mark its 125th anniversary over the weekend of the 14th to 16th of July, and Anita Segar, G0SXO, asks anyone else who is planning to organise a Red Cross 125th anniversary station to please contact her as soon as possible. G0SXO's address is correct in the current RSGB Call Book.

The Mendip Hills VHF repeater, GB3WR, on channel R0, is off the air due to an antenna problem. Further details can be obtained from Jon, G0MBX, whose address is correct in the RSGB Call Book.

The York Cluster Support Group DX Convention will take place on Saturday the 13th of May at the Post House Hotel, Tadcaster Road, York. Speakers at the convention will include Alan Jubb, G3PMR; Roger Western, G3SXW; Ron Stone, GW3YDX; and Bob Harrison, G4UJS. For other members of the family, York Minster, the Jorvik {pronounced "Your-vick"} Viking Centre and the Railway Museum are a short distance away. For further information, contact Colin Thomas, G3PSM, 36 Chelwood Crescent, Leeds LS8 2AQ.

And a note for your diary: the RSGB International HF Convention will take place on the 9th and 10th of September at the Beaumont Conference Centre in Old Windsor. Further information can be found on page 69 of the May RadCom, or can be obtained from the RSGB by calling 01707 659015.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From the Maldives, HB9DIF will sign 8Q7BV from now until this Saturday, the 6th of May.

From Jamaica - 6Y5 - Roger, GW4OFQ, hopes to be active for ten days from today, especially on the WARC bands.

From Saint Pierre et Miquelon {pronounced Meek-allon}, members of the Loos DX Group are active as from now until the 27th of May on all bands 160 to 10 metres, CW, SSB and RTTY signing TO7I, Tango Oscar Seven India, and "FP/own calls".

And from Latvia, YL100R is a special event station celebrating 100 years of radio. It is active until the 21st of May on all bands and modes.

Next the Rally News:

Today, the 30th of April, is the second day of the amateur radio and computer rally at the Adam Bede Trade and Exhibition Centre, Derby Road, Wirksworth, near Matlock. Doors open at 10.00 am.

Also today, the British Amateur TV Club is holding a rally at the Sports Connexion, Coventry. The rally will feature many radio trade stands, special interest groups and a bring and buy stand. Doors open at 10.00 am, or 9.30 am for disabled visitors, and talk-in will be on 2 metres channel S22 and on the GB3CV repeater.

The East Cleveland Amateur Radio Club annual rally is also taking place today at the Leisure Centre at Marske-by-the-Sea. The event features the usual traders and a bring and buy stall and the doors open at 11.00 am.

And the Anglo-Scottish Rally takes place at Tait Hall, Kelso, today, Sunday the 30th of April, starting at 11.00 am. Talk-in is on 2 metres channel S22.

The Dartmoor Radio Rally will take place at the Yelverton Memorial Village Hall, Yelverton, in Devon, next Saturday the 6th of May, starting at 10.30 am. There will be talk-in on 2 metres channel S22 and more information can be obtained from Ron on 01822 852586.

And the Amateur Radio Caravan and Camping Club is holding a rally at Weston, Northamptonshire, over the Bank Holiday weekend of the 6th to 8th of May. Further details may be obtained from the ARCCC membership secretary, Alan, G4LWA, on 01494 531755.

And please note that the Mid Cheshire Amateur Radio Society rally, which was due to have been held on Monday the 8th of May, has been cancelled.

Now for the HF contest news, and we start with a reminder that groups planning to take part in this year's HF National Field Day on the 3rd and 4th of June must register, by sending details of the site to be used, to David Hill, G4IQM, not later than this Saturday, the 6th of May. This is one of the Society's flagship contests, and if your club usually takes part please remind your Secretary or Contest Manager to register now if they have not already done so. The full rules for HF NFD are in the April RadCom.

Tomorrow, Monday the 1st of May, the fifth and final event in the RSGB Slow CW Cumulative contest will take place between 1900 and 2030 UTC. The full rules are in February's RadCom.

Next weekend the Italian 'ARI International DX Contest' will take place from 2000 UTC on Saturday the 6th of May, for 24 hours. When the May RadCom went to press, only the 1994 rules were available, and these were printed on page 21. However, special rules apply for 1995 - the 100th anniversary year for the invention of radio - and anyone intending to enter this contest is invited to send an SAE to the RadCom office at RSGB Headquarters as a matter of urgency for a copy of this year's rules.

Next some VHF contest news:

Today marks the start of the 10GHz Summer Cumulatives season. The event runs from 0900 to 2100UTC and the centre frequency for talkback is 144.175MHz. Other 10GHz events in the summer are also on the last Sunday

of each month.

Next Saturday, the 6th of May, the first 10GHz Trophy contest is being held. The rules are in the April RadCom.

Also on Saturday, the 6th of May, the 70cm Trophy Contest will take place. The rules are in the March RadCom.

And next weekend, the 6th and 7th of May, the IARU 432MHz to 24GHz contest will take place. The rules are also in the March RadCom.

Now some repeater news:

The North Norfolk UHF repeater, GB3NN, on channel RB2 has been off the air since the 13th of April due to refurbishment of the building in which the repeater is located. The repeater is planned to be back on the air in late May or June.

And now the solar factual data:

The period from the 17th to the 23rd of April saw solar activity at moderate levels, with increased geomagnetic levels. On the 20th we started again to receive the daily bulletins from Boulder, Colorado, and consequently not all of this report is complete. Solar flux levels increased slightly to peak at 92 units on the 19th, but declined to 77 units on the 23rd. The average for the period was 86 units. Two M-class solar flares took place on the 22nd, the largest being a M7.1/2F at 11.51. A type IV radio sweep accompanied this flare. From the 20th the electron fluence was at a moderate level. The 90-day solar flux average on the 23rd was 84 units. The geomagnetic field was mostly quiet up to the 22nd and then increased to "unsettled" conditions with an Ap index of 20 units on the 23rd. The state has been "nil, nothing to report". The aa indices, as supplied by the British Geological Survey for the period from the 11th to the 17th of April, started at "sub storm" levels, with 36 nanoTeslas recorded on the 11th. Activity declined to quiet levels for the rest of the period and was down to only 5.5 nanoTeslas on the 15th. The average was 15.2 nanoTeslas, about K2.

I'll repeat the figures: flux-86, Ap index-8

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 14th to the 20th of April, averaged 6.2MHz. Levels were down to 5.5MHz on the 17th, but recovered to 6.9MHz by the 19th. The darkness hour lows varied little and averaged 3.1MHz. The daytime highs took place between 10.00 and 14.00 hours, with the darkness hour lows between 03.00 and 05.00 hours.

I'll repeat the figures: highs-6.2MHz, lows-3.1MHz.

And lastly the solar forecast.

This week the quiet side of the sun is expected to be looking our way, and solar activity should be very low with solar flux levels down to the 70's. Due to a well positioned coronal hole over the last four solar rotations, geomagnetic activity is expected to increase on the 3rd or the 4th of May to "storm" levels. During the last rotation an Ap index of 78 units was recorded. Ionospheric conditions are expected to suffer if the expected high levels of geomagnetic activity take place. During this week two meteor showers reach their peak, the first is the Eta Aquarids on the 5th, and secondly the Piscids on the 7th.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Zulu and G7 Uniform Quebec series, and Novice calls in the 2 0 Alfa Lima and 2 1 Delta Whisky series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

>ham radio of people who aren't interested in the technical side of the
>hobby do to damage *your* participation?

This has nothing to do with sharing interests. It has to do with
sharing that minimal knowledge which justifies our free occupation of
valuable spectrum. Amateur radio exists for reasons which are well
defined. If *some* technical knowledge is just *one* of the facets of
the hobby, how come you *can't* score 0 on the technical questions and
pass the written? I know I *can* score 0 on the emergency
communications questions and still pass. What does that tell you?
>
>> Based on Part 97.1, on our
>>testing and on our history, ham radio is a technical hobby on top of
>>whatever else it may be. For most of us that doesn't mean
cutting-edge
>>exploration; what it *does* mean is learning something about the

>interested in emergency communications is "a slipup in our testing
>scheme?"

Other services can provide emergency communications. What other
service can provide hands-on training in RF? And, anyway, just who are
all these dedicated souls who get their ham license solely to handle
emergency communications? I think it's a myth.
>
>Now reread the previous paragraph replacing "emergency communications"
>with "enhancing international goodwill." Does the logic still apply?
>Ham radio has many facets, and it's ludicrous to expect that every

>going to pick one thing and demand that everyone participate in that,
>why pick the technical area? Seems that emergency communication would
>be the activity most likely to impact society as a whole.

Ham radio is less valuable (not *not* valuable, just less valuable) in
emergency communications today than ten or twenty years ago. In the
next ten or twenty years it will be even less so. OTOH, having a core
of technically-literate people is fundamental to any well-off society,
and becomes more so every day.
>

>
Don't worry, I'm not going around checking up on anybody, peeking in
windows and writing up reports in my little yellow pad. Read what I've
written and tell me where it says I want to control what other hams do.

Based on your last paragraph, you would support a reduction in the
written test requirements, since much of the written deals with matters
other than "following the rules and not unnecessarily interfering with
other stations". That is a minimalist view indeed. "Fortunately", I
believe most hams have a higher goal.

|> rather, you seem to criticize the licensing system strongly yet you
|> haven't shown your own mastery of it.

Some of us still believe that "Extra" means Guru of Ham Radio,
not "I paid my $5.75 and guessed correct on 7 out of 10".

Being a real Extra (not what its become today) is almost a badge of
honor bestowed upon you by the rest of the amateur community in your
area. When people start coming to you and look up to you, because you
have all the right answers and know how to help fellow amateurs
seeking assistance -- that's an Extra.

Real "Extras" don't label or think of themselves as "Extras", they just
are.

:From: mcs@vectorbd.com
:Subject: CTCSS BURST

:here is an idea. all repeaters now are going pl as interference gets
:greater. the reapert directory works for getting that pl tone but not
:good enough and then you have to program it into your radio besides! well
:here how about when you key your mic it send a burst of all the tones!
:that way you never have to worry about the tone to use. this would be A
:Life saver. especially if you travel and dont know the repeaters! any
:thoughs maybe we could get the big name manufactures to do it. please
:post soem thoughs on it here.

If I remember correctly ComSpec says it could take as long as 200 milli seconds to trigger X 32 standard CTCSS tones. Using this method, assuming the repeater latches on when a CTCSS triggers it, it could take as long as 6.4 seconds to run through all of the tones. What I would suggest is using 2 to 4 CTCSS tones nation wide as a standard for open repeater . Many open repeaters are using 103.5 and 156.7 that would be a place to start. If the repeaters transmit a CTCSS tone a couple more tones would be useful so that a mix + tone would not bring up the repeater. I would suggest keeping the tones in the middle of the range since some older radios would require deviation adjustments if going from one end of the range to the other. I would also suggest not having adjacent tones 103.5 - 107.2 sometimes they false.

k0hb@hamlink.mn.org (Hans Brakob) writes:

<lots of good stuff snipped>

>"Real" Amateur Radio Operator: Definition -- A person who has been
>issued an Amateur Radio License by the FCC. These licenses come in
>6 classes.
>
>73, de Hans, K0HB

I agree with Hans, but let me take it one step further. Will Rogers once said, "I never met a man I didn't like." As his son, Will Rogers, Jr. pointed out, Will Sr. didn't mean he never disliked anyone. He meant that he never disliked *before* he met them, i.e., at the moment of meeting them he made the assumption that he would like the person, because before meeting them he had no *personal* basis for disliking that person. And as Will, Jr. noted, there were some people whom his father grew to dislike *after* he met them, the same as everyone else might do.

I'd like to paraphrase Will Rogers and say that "I never met a licensed amateur whom I didn't consider to be a real ham." To claim that someone isn't a "real ham" *solely* on the basis of their class of license, or what kind of requirements they had to meet to get that license, or the chronological period during which they took their test, is the height of arrogance. It is a clear indication that the accuser either terribly insecure or monumentally stupid, and in either case he/she has my profound sympathy. I recommend professional counseling, after which you may want to consider becoming an "Elmer" of sorts and offering *help* to people instead of attacking them.

But *everyone* have a great weekend!

>Hakan
>SM3TXO

(sigh) Sorry, Hakan, that's *not* what it stands for. It stands
for "Bayonet Neill Concilman" after the two inventors (Neill and Concilman).
Thus it is "Bayonet Neill Concilman connector", not "Bayonet Navy Connector
connector."

>harder. So what I don't understand about these discussions is, why
>can't we each just do our own thing (how 70's!) and let other people
>do theirs without trying to belittle them?

Jon, you've hit the nail on the head precisely! Why, indeed, do
all these belittling posts keep appearing?

You may also discover, as I and many others have, that different aspects
of the hobby may catch your interest at different times. That's great
if it happens, but isn't any kind of indictment if it doesn't. Some
people are generalists and like to try differnt things, some prefer to be
experts in one or two areas. Nothing wrong with either approach; do
whatever is fun for you.

But there is no need to make ridiculous claims that "this aspect is
more important than that aspect" and then attack those who don't agree.

1933. BB409 Varicap Diode???

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-28 00:00:00 UTC
From: miller@dynamo.ecn.purdue.edu
Message-ID: <3nrhgj$9k7@mozo.cc.purdue.edu>
Source record: 247618

I have one problem, with two possible paths to a solution.

Path One: What the heck is the capacitance range for a BB409 Varicap diode?

Path Two: When modifying an old RCA700 440 rig for 9600 bps operation,
how many pF do you need to make the Channel Element swing 3kHz?

Problem: I have an old RCA 700 that works very well. I have the old TEXNET
instructions on how to modify a working RCA 700 for 9600 bps. Mod
calls for a Siemens BB409 varicap diode. Siemens says that part
number is so obsolete they can't even give me an idea as to what to
use for a replacement. E-mail to TEXNET people gets no response.
I don't want to waste an entire weekend with a bunch of varicap
diodes, radio, and service monitor. Can't anybody tell me what sort
of pF range I need for this mod?

Thanks in advance,

Tim

>Of-The-Art"...and I just had to shake my head in disapproval.

well...maybe. depends on what world you have to live in. if you are doing a design for a computer with 256 bytes of ram and maybe a 1k of rom, you can't do a lot with high level except to get clues about approaches.

a good CS major will not only have C under his belt, but Ada, Fortran, Cobol, Assembly, etc. plus some serious math AND practical EE courses as well. he should hopefully have been able to get some time on various operating systems including figuring out how to "black start" a machine (writing the boot roms).

not every project has the luxury of using the "state of the art". many projects have lifespan years longer than even some parts (see avionics for one example...a mechanical version might be something like diesel engines or maybe a bowling alley pinsetter...).

you might just have to look at some PL/M code and fix it someday.

len, i would say you need to read more mags.

w2nsd a while back talked for a short while in one of his editorials about the printing industry and the developments in paper and ink technology that lets a magazine publisher print on tissue thin paper in full color with stable inks.

thinner paper = lower postage costs due to less weight.

i miss the shrink wrap as well, but it apparently isn't completely necessary and adds processing cost and weight to the shipment.

all trying to keep your dues lower, y'know.

there was also an interview with one of the hefners around the time playboy went from stapled to perfect bound and problems of ink stability and paper strength was also discussed. big time technology at work here.

all driven by economics.

I'm currently using a thru the glass antenna on my S-10. It works OK but I believe there is room for improvement. The problem with changing to another type of antenna is a mounting point for the antenna. Due to the truck being parked in the a garage with a low ceiling I can't use a roof mounted antenna. The truck has "plastic" bumpers. Any ideas about an antenna for this truck? The truck also has a tonneau cover over the bed.

Thanks,
Tom

Can someone please verify this for me or am I mistaken...
It's about storing repeater freqs and there offsets. I
need to use a few repeaters that do not use the
normal 600 KHz +- split . If I read the manual right
then I can program the apropriate split however it will
change all of my other (normal) split (600 +-) for other
memory channels of repeaters? If I'm right then the only
way for me to work it out so I don't have to go back and
continually redo the split for the normal repeater (:-{}
split will be to tune the input to the call channel and
the output to the vfo or memory channel or vis-a-vers
and toggle the buttons back and forth (blech). Kinda
like using a transmit receive switch and lets not forget
to use the PTT. Is there an easier way?????

Show of hands of those I may have confused....

Thanks,
Keith Dayton,Ohio

> Model: Radio Receiver BC-348-Q
> Misc: CW only, US Military receiver.

Well, I must say that this brings back the past. The 348 was my first receiver. I purchased it at a hamfest for $15.00 brand new still in the shipping case. I borrowed a lab supply at first to run the dynamotor. I can still remember it humming away. I later built an AC supply with a transformer I got from fair radio, got the tech. information from them also. Mainly an AM and CW receiver I later made a number of mods. the first was to add product detection and build a converter for 15 meters. If you are not asking an arm and a leg I am interested for old times sake.

RAC BOARD OF DIRECTORS MEETS IN OTTAWA

The annual meeting of the Board of Directors of Radio Amateurs of Canada was held in Ottawa, Ontario April 21 and 22, 1995. The audited 1994 financial report indicated a modest surplus showing higher revenues and lower expenditures. The Board noted the many changes taking place in amateur radio today which impact on the stability and growth of the hobby, in particular the increasing demands and limited resources of RAC to meet the challenges presented by industry and government in the management of the radio spectrum.

The Board was appraised of the government's need to re-look at the funding of the proposed delegation of the administration of the Amateur Radio Service by RAC in light of recent federal budgetary cutbacks. The Board noted that Industry Canada is examining alternative methods of sourcing revenue to meet the needs of managing the radio spectrum. Based on a possible new formula to determine the value of the spectrum used, amateurs may be assessed an annual "spectrum user" fee rather than the traditional station license fee. Just when and how this will impact on Amateurs is not known at this time.

RAC's Directors reviewed government-related matters. The Board directed the President to express to the Minister its concern over the manner in which members of his staff are proceeding with EMCAB2 without consultation with RAC on the measurement methods and procedures. Industry Canada advised RAC that the International Telecommunications Union (ITU) may be approached at WRC 95 (October 1995) to abolish the need for Amateurs to know morse code to operate below 30 MHz. The question of unwelcome new wind profilers in the 902-928 MHz band was addressed and discussions with Industry Canada were launched by RAC's Spectrum Management Advisory Committee.

The Board's desire to become more involved in RAC's current and future planning resulted in action to form a permanent standing and advisory committee structure for that purpose. While reiterating its firm commitment to the stability and growth of the Field Organization, the Board initiated action to reassess the present structure and future needs of that important community service organization. Canada will host the XII IARU Region 2 General Assembly in Niagara Falls in September 1995 and the Board was pleased to note that plans are on schedule.

The official minutes of the meeting of the Board and the financial report will be presented in The Canadian Amateur in the near future.

>society's technological base as a whole.`

The governmental logic behind Incentive Licensing--the FCC inititative that first began to operate in Amateur Radio on November 22, 1968, and I capitalize it to differentiate it from the concept of incentive licensing, which all licensing systems that require you to be licensed before you can do something legally embody--was fundamentally flawed because it represented a highly biased view of what Amateur Radio was and had been--a bias largely based on the idea that Amateur Radio is and has always been, not only on paper but in most ham's minds and hearts of hearts and and shacks, a *technical* hobby undertaken by people who come in and stay in to ongoingly learn about radio.

This is the core of why Incentive Licensing *had* to fail: In fact, you don't need a ham license* to learn about radio and understand it.* All a ham license does--all a ham license has ever done--is let individuals legally transmit certain types of signals at certain places in the spectrum at certain powers, identifying those emissions in a certain way.* Everything that doesn't have to do with subjecting your signals to the vagaries of propagation or testing your system's

interoperability with other stations, you can do at your workbench, perhaps augmented by receive-only use of an antenna system. Some of those other things you can do under the color of Part 15 of the FCC rules if Part 15's power, emission and frequency restrictions don't disallow valid findings. If Part 15 won't suffice, you and the stations with which you must interoperate can probably qualify for a Special Tempory Authority. Can anyone reading this newsgroup really believe that the commercial and tactical communications systems now in use from dc to daylight somehow all had to undergo tryout in the ham bands before their designers and users could bring them to fruition? Can anyone reading this newsgroup really believe that any significant number of those designers and users *necessarily* achieved or based their technical knowledge of radio on study for Amateur Radio licenses? Can anyone reading this newsgroup believe that these telecommunications systems would not exist if the Amateur Radio service did not exist?

Message-ID: <a75_9504290224@mba.mba.org>
Source record: 247500

conklic9391@cobra.uni.edu (CHRIS CONKLIN (N0PAV)) added to the discussion about QST by saying "Thank God that QST doesn't burden us down with too many construction articles anymore :-("

I was wondering if anyone would bring up this terribly important point in this discussion about QST "becoming a rag". I like the small format with the black and white cover, probably because that's the way it was when I first got my first issue, back in April of 1971 (there was a guy heavily dressed in a parka in Antarctica), and a year and a few months before I got my license.

But I have very little negative to say about the layout today. I miss the QST of my early days, which was the way QST had been for a long time, but the covers don't look bad today, the bindings not a problem, there are no more ads than there've ever been and it's not a hard magazine to read.

But I am terribly troubled by it no longer being a technical magazine. I have plenty of QST's from before my time, and they did not hesitate to run articles on terribly esoteric matters out of concern that most amateurs would not be interested. Because amateur radio was still considered a technical hobby, and ven if most amateurs would not take up moonbounce or similar activities, at least they could read about what was going on.

Now it's been decided that things must not be too technical out of fear of scaring people off. The really technical articles are siphoned off to QEX. That's a nice tiny little magazine, but it suffers from being targeted at a very small group. Print the articles in QST, and it would not cost much for them to reach all readers. It's a multi-tiered system now, be an ARRL member and get QST, then you can subscribe to QEX.

If QST is not an enjoyable magazine with technical articles, then maybe it's not that the articles shouldn't be there but we've started to redefine the hobby for the sake of getting more people. If technical matters were seen as the fun stuff that they are, maybe people would enjoy them rather than fear them. Maybe it's not what is being talked about that is too technical, but merely the language used to describe them. Technical matters can be made understandable, but if you start using academic language, that's where people get lost.

Wow! I just picked up a software package for the Yaesu 51 H.T. yesterday at the Dayton Hamfest. It's made by RT Systems of Al. It's a windows based package and it reads the memory channels or programs the radio. You can store files of your most visited cities or just switch from Alpha back to Numerical. Programming the radio after you create a file only takes about 45 seconds. Presto 120 channle programmed! This is slick, you can program anything from the P.C. that you can do from the radios keypad.

Less than $40 too complete with programming cable.

WW> Manual. If they don't have the exact number in stock, they should
WW> be able to sell you a suitable Japanese equiivalent.

WW> BTW, the Japanese devices are very good, and very reliable.

As it happens, I found Japanese versions of the transistors I
needed. However, with one of the types I needed, I had to try
three samples before I found a good one. "Good" defined as
being able to show that they consisted of working back-to-back
diodes when tested between base-emitter and base-collector.

I was also astounded that the people at the distributor were
unaware of this means of making a first pass at testing
a bipolar transistor.

In article <3nr88g$lmd@ixnews3.ix.netcom.com>, mjsilva@ix.netcom.com (michael silva) writes:

|>Other services can provide emergency communications. What other
|>service can provide hands-on training in RF? And, anyway, just who are
|>all these dedicated souls who get their ham license solely to handle
|>emergency communications? I think it's a myth.

Ah, now there is some sound reasoning. Let other services perform the job the FCC set out for us. I guess you'll give up the spectrum to those other services since we're no longer fulfilling the role the FCC established for our service? I'm also sure that the DoD and other government supporters of amateur radio would love to hear your suggestion. Not.

And as to those dedicated souls, join an ESDA or RACES organization. Many of those people get their licenses for the primary purpose of being able to provide emergency communications. Just as you have your interests, they have theirs. They probably can't imagine fighting all the QRM in a contest and calling it fun, or trying to crack a pile-up and calling that fun. So what makes you think you can speak for them?

|>Ham radio is less valuable (not *not* valuable, just less valuable) in
|>emergency communications today than ten or twenty years ago. In the
|>next ten or twenty years it will be even less so. OTOH, having a core
|>of technically-literate people is fundamental to any well-off society,
|>and becomes more so every day.

I'm sure your prediction has been made for years, yet over 100 amateurs have been assisting in Oklahoma City with 60-80 them serving at any given time. I guess they must be sitting around with their hands in their pockets. Ask the Red Cross, the Salvation Army, FEMA, or any state or local ESDA who provides or assists their communications in a disaster. While you're at it, check how well the phone company handles 300-500% call attempts over normal peak hours. We could instead pay the phone companies enough to handle those sorts of peaks if you don't mind paying twice what you currently pay for phone service.

Have you ever participated in any emergency communications operation or organization, or are you just speculating based upon your narrow view of the world?

1964. Field Day questions

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-29 00:00:00 UTC
From: little@iamu.chi.dec.com
Message-ID: <3nu2ta$a6t@jac.zko.dec.com>
Source record: 247506

We're trying to get prepared for Field Day and had a few questions
that I'm hoping this august group can answer.

What are the proper section abreviations used on CW? Many are obvious,
but others such as San Diego aren't quite so obvious as it conflicts
with South Dakota.

If we understand the rules correctly, a 2A entry with a novice station,
a packet station, a VHF/UHF station, and a satellite station can have:

2 transmitters on any band except 30 meters.
1 transmitter on any novice band
1 transmitter on any band except 30 meters operating packet
1 transmitter on any band above 30 MHz
1 transmitter operating on the satellites

So in effect a 2A entry can have 6 transmitters operating simultaneously?

How are packet contacts typically established? Do folks use UI frames,
or do they normally connect to another station and use numbered I frames?

I don't see any prohibition for using national calling frequencies. Does
this mean that contacts on 146.52 are acceptable?

HELLO FELLOW HAMS:and FUTURE HAMS !!!!!!!

re: NEW HAM BBS dedicated to amateur radio !!!!

There is a NEW DEVOTED AMATEUR RADIO BBS in town ,from your
ARRL/LAX affiliated club coordinator , JOE CIRA , KB6AXK .....
Everything and anything about AMATEUR RADIO will be found here,
IF NOT ? Let me know and we will post it and file it !!!!!!!!

HAM*INFO*LINK*SOURCE BBS at 1-818-584-1952....
24 hrs,8-n-1,anyspeed.....
running 486/66 with 2.1 gig of space !!!
cd/rom's soon and tnc/modem door soon !!
qsl route database,clubs,newsletters,bulletins and more....
VEC/VE exam & class list for all So.Cal.
sample exam tests and answers for all class's..
ARRL mirror of all there files !
Using Wildcat v4.01 software..
easy to log in and no FEE's it's FREE !

73's & 88's de kb6axk,joe cira,ARRL/LAX/ACC.

1966. Conn QSO Party Next Weekend

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-29 00:00:00 UTC
From: kd1yvjim@aol.com
Message-ID: <3nudae$9sm@newsbf02.news.aol.com>
Source record: 247508

Connecticut QSO Party May 6-7, 1995

The Candlewood Amateur Radio Association, CARA, will sponsor the 1995 Connecticut QSO Party 2000 UTC 06 May through 2000 UCT 07 May, with a rest period from 0400 through 1200 UTC 07 May. Operations will be on 160 thru 2 meters, including 2 meter FM. Stations may be worked once per band per mode.

CARA will operate W1AW, the American Radio Relay League station on Sunday, 07 May, as well as the club station, W1QI throughout the contest.

A plaque and certificates will be awarded. Voice contacts count as 1 point each, CW contacts as 2 points each, and contacts with W1AW or W1QI as 5 points each. Connecticut stations score multipliers of 1 per Connecticut county plus one per other state or DX station. Stations in other states count one multiplier per Connecticut county (8 total.)

Another message will follow with details of the Worked All Connecticut Counties award. Contacts for both awards are encouraged.

Details will be found in the April and May 1995 issues of major ham magazines (note that in the April 1995 73 Magazine, the column heading stating April dates is in error, although the text is correct.) For a full operating guide package, contact Frank Etzler, N8WXQ at his callbook address.

1967. WACC Rover Operation Next Weekend

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-29 00:00:00 UTC
From: kd1yvjim@aol.com
Message-ID: <3nudae$9so@newsbf02.news.aol.com>
Source record: 247509

Worked All Connecticut Counties Rover Station

In conjunction with the Connecticut QSO party (see previous announcements), the Candlewood Amateur Radio Association will operate a rover station to cover all 8 Connecticut counties. This station will operate the club callsign, W1QI, and will operate on the schedule shown below.

While the WACC Award is not tied to the CT QSO Party, contacts made for either award are elligible for the opposite. The operation of this rover station is intended to make it easier to obtain the WACC Award.

Each time period will be split between 3 bands, starting with 80m, then 40m, then 20m. Planned frequencies are 3915, 7280 and 14280 KHz, each +/- QRM.

Submit logs for the Worked All Connecticut Counties Award to:
Candlewood Amatuer Radio Association
P.O. Box 3441,
Danbury, CT 06813, USA

Period, UTC	County
Saturday, 06 May	
2000 to 2045	Litchfield
Sunday, 07 May	
1200 to 1300	Hartford
1300 to 1430	Tolland
1430 to 1600	Windham
1600 to 1730	New London
1730 to 1830	Middlesex
1830 to 1915	New Haven
1915 to 2100	Fairfield

Good luck for the WACC Award, and 73 de KD1YV

Have lost track of George Bell W8MLQ - who was last seen in 1957 and was working for Procter & Gamble and living in the Detroit area.
George has a 40 year reunion to attend in October for the Class of '55 - Grosse Pointe (MI) High School.
Also lost track of Jim Luber W8MLR - last known in the Detroit area around 1974. Owned a hot air balloon at the time - the "Cloud 9" and was married to gal named Kathy (Robbins) Luber.
Any information about one or both will be appreciated.

Tom,

For the last 10 years or so I have been a big fan of through-the-roof mounted antennas with the standard *Motorola 3/4 inch hole mount (yes you have to drill a hole).

I use 1/4 wave antennas and they perform well, plus for traveling I can always screw on a gain type antenna. As far as hitting the garage door, I had both a 2 meter and 450 1/4 wave whips (yes, two holes) on a Ford Bronco II. The 450 whip cleared the garage door, the two meter whip did not. Drove in and out at least twice per day for 4 years with no ill effects (the whips spring back into position). I would think with the truck you would not get any contact at all with the garage door.

Good luck
73

This is not too surprising since the antenna is in close proximity to
ground, pipes, wires and likely chicken wire embedded in stucco.

>I decided to check the SWR using a Bird watt meter. To my supprise
>my Kenwood 850S/AT was putting out about 250 watts forward and about
>150 watts reflected power!!! Well, the 850 only puts-out ~100 watts.
>What would cause readings like this?

The antenna tuner. The tuner is successfully matching the transmitter
output to the load presented to it. The efficiency is good since the net
forward power is the 100 watts you expect.

>I first thought I had a falty
>watt meter so I used another with the same results.

Actually it takes a pretty good wattmeter to get the proper indications when
the VSWR is high.

If you do the
>calculations the SWR comes out to be something like 10:1 (this was
>just what I remember from one of my readings). I don't think this
>is correct because my Kenwood tuner (builtin) could not handle
>this high SWR.

The matching range of a tuner depends on the frequency, resistive and the
reactive components of the load impedance in a remarkably complex way.
Typically the tuners built into radios are designed to assure they will
match any combination of resistance and reactance resulting in a VSWR of
say, 3:1. Such a tuner may or may not match a particular case of 5:1. If
it won't at first first, it might do better if you transform the impedance
a bit by adding a bit of feedline. In the case of 10:1 mismatch, it may
or may not work.

If the VSWR is quite high, it's possible for the tuner to dissipate quite
a lot of power and perhaps be damaged by heat, high current or high voltage.
I don't know if this is a problem with the modern autotuners but it's
something to bear in mind. In your case, since you're transferring
nearly the rated power out of the box, the tuner components can't be

dissipating much and you likely don't have a problem.

Good question, I hope this helps.

1971. 19" racks for sale

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-29 00:00:00 UTC
From: ernie@world.std.com
Message-ID: <D7szvE.Fqv@world.std.com>
Source record: 247513
Cross-posted to: ne.forsale,rec.radio.amateur.misc,misc.forsale

I have some BRAND NEW 19" electronics cabinets for sale.

These were bought as surplus and the seller told me they originally paid
about $1500 ea for them.

I have 2, one with a slight scrape in the paint (not a dent) - $100
and the other is perfect for - $125. Take 'em both for $200.

Here are the specs.

Overall height: 54"
Overall width: 23.5"
Overall depth: 30"
Front door height: 42.5"
Back door height: 32.5" (the other 10" is open)
Door width: 19"
Internal rack: 19" (standard for all rack mountable equipment)

Color: Beige/off white

Features:
o Vented doors, one vent in the rear, 2 in the front
o Doors are removable
o Lock with 2 keys, (one lock for each door)
o Fully enclosed with emi gasketing on all seams*
*With the exception of a 10" by 19" opening in the rear
o Opening can be put at the top or the bottom of the cabinet
(i.e. the door is adjustable)
o Solid top
o 4" lockable wheels
o Casters ("feet") built in (screw type, can be raised/lowered)
o VERY rigid and sturdy. Doors, side panels, etc, are for looks only,
not for rigidity.

Notes:
o No shipping
o You must pick up units in Wilmington, MA (15 min from Boston off
rte 93)
o I will take reasonable offers for them.
o I would guarantee them against DOA, but there is nothing to break.

Please email me for more info.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 29/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 29 APRIL AND FORECAST FOR 30 APRIL - 02 MAY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 68/2

GOES satellite data for 28 Apr
Daily Proton Fluence >1 MeV: 7.7E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 8.2E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
30 Apr 01 May 02 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 30 Apr: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 28 Apr
Learmonth 8 2222 3222
Fredericksburg 7 11
Planetary 8 13

Observed Kp for 28 Apr: 2434 3221
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
30 Apr 20 Active
01 May 10 Quiet to unsettled
02 May 5 Quiet
COMMENT: IPS Geomagnetic Warning 12 was issued on 28 April and is
current for interval 28-30 April. Active conditions did not
eventuate yesterday. However, active levels are still expected for
today. A large south polar coronal hole is rotating towards
centre of solar disk. Disturbance expected May 4-6.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
29 Apr normal normal-fair fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
30 Apr normal fair poor
01 May normal normal fair
02 May normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
29 Apr 9 depressed 10-15% early in UT day then near predicted
monthly values.

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
30 Apr 15 Near predicted monthly values
01 May 15 Near predicted monthly values
02 May 15 Near predicted monthly values
COMMENT: MUFs at Townsville were depressed 15-20% 00-05UT then near
predicted monthly values. MUFS at Hobart were depressed 10-15% for
most of the UT day with spread F observed throughout local night hours.

What exactly is a trunked radio system? I have heard this phrase
and never understood what it meant. I have heard of repeaters being
"trunked" . Thanks.

David
KB2TJQ

1975. ? Open 440 repeaters in SoCAL ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-29 00:00:00 UTC
From: jlowman@netcom.com
Message-ID: <jlowmanD7rszA.B18@netcom.com>
Source record: 247517

For whatever reason, the trend in southern California is to have closed repeaters on the 70 cm band.

If you know of an open repeater on the 440 mHz band, please share the location, frequency and PL with me.

If you know of an interesting repeater on that band that is closed, but has memberships available for an annual supporting fee, I'd appreciate knowing that, as well. It is not my intent to be a freeloader.

If the gentleman from the Sunset Ridge repeater, who had invited me onto this machine in a previous posting, will repeat his offer, that would be great.

Thanks and 73,

Jim

From: zoulas@dorsai.org
Message-ID: <D7rv1K.EBL@dorsai.org>
Source record: 247518

I am in the process of obtaining my Technician license. I just picked
up a TH-79 Kenwood and I am just dying to use it with autopatch.
Does anyone know os any repeater in the NYC area that does not require
a pin to be entered prior to dialing? I do not plan to use it without
my license, hoever I would like to try it just one--you know how it
is.

Thanks in advance.

>defined. If *some* technical knowledge is just *one* of the facets of
>the hobby, how come you *can't* score 0 on the technical questions and
>pass the written? I know I *can* score 0 on the emergency
>communications questions and still pass. What does that tell you?

It tells me that the goal of the exams is to ensure that licensees'
skills are sufficient to keep them within the bounds of good technical
procedure and within the rules. The exams are not designed to test
knowledge about *what* to communicate, only how. That doesn't mean
that the "what" isn't important, but that it isn't part of the
mimimum-skill level you need to get into the game. In short, the tests
don't define the service, they only ensure (in theory, anyway) that
licensees have the skills to not unnecessarily burden others with
improper operation.

>Other services can provide emergency communications. What other
>service can provide hands-on training in RF? And, anyway, just who are
>all these dedicated souls who get their ham license solely to handle
>emergency communications? I think it's a myth.

Maybe there aren't a lot interested *solely* in emergency
communications, but there are plenty who spend a substantial part of
their ham life preparing for and performing public-service
communication. I have a hard time seeing those of that group who don't
also have an interest in the technology itself as "not real hams."

>Ham radio is less valuable (not *not* valuable, just less valuable) in
>emergency communications today than ten or twenty years ago. In the
>next ten or twenty years it will be even less so. OTOH, having a core

>of technically-literate people is fundamental to any well-off society,
>and becomes more so every day.

Are you seriously arguing that the continuation of technical literacy
is dependent on ham radio? In the years I've worked in the electronics
industry, I've worked with both large and small groups of engineers
and technicians. In no place (except my present employer :-) were hams
ever anything but a tiny fraction (often only me) of the technical
staff. If ham radio went away tomorrow, it wouldn't slow down
society's technological progress measurably. That's not to say that
individual hams haven't improved their technical knowledge by dint of
their amateur activities, and that is of some value. But ham radio's
technical contribution is pretty small potatoes in the context of
society's technological base as a whole.`

>>What I want to require of all licensees is that they follow the rules
>>and don't unecessarily interfere with other stations--amateur or
>>otherwise. Beyond that, what they *do* in ham radio is none of my
>>business. You might call this the "big tent" view of ham radio.
>>Fortunately, it's a view to which the FCC subscribes. So, I believe,
>>do most hams. I hope so, anyway.
>>
>Don't worry, I'm not going around checking up on anybody, peeking in
>windows and writing up reports in my little yellow pad. Read what I've
>written and tell me where it says I want to control what other hams do.

You said, "I make no apologies for continuing to consider any ham who
has *no* interest in the technical side of the hobby to be little more
than a slipup in our testing scheme." I suppose if we split hairs you
don't want to control what other hams do--you just want to them to
not be allowed to become hams in the first place.

>Based on your last paragraph, you would support a reduction in the
>written test requirements, since much of the written deals with matters
>other than "following the rules and not unnecessarily interfering with
>other stations". That is a minimalist view indeed. "Fortunately", I
>believe most hams have a higher goal.

In fact, I *don't* support a *reduction* in the written test
requirements. I *do* think the pools and syllabuses should be
strengthened to provide better and more relevant technical
questions--a position which I have backed up by submitting proposed
changes during the review cycles. In my view, the exams do an
insufficient job of testing the applicant's ability to recognize,
pinpoint and eliminate potential problems. Part of the reason is that
many of the questions instead ask about irrelevant bits of technology
that have no bearing on the applicant's fitness to operate a
transmitting station.

6,2, & 70 cm meteor scatter skeds wanted for May 6 (A Saturday). I am in Ms. in grid square EM51JQ and am looking for skeds to the North, Northeast or Northwest. I am especially interested in some long haul 6 meter skeds or 432 skeds. Inexperienced are welcome. Please e-mail your reply asap because the time is getting short. Please include your GRID SQUARE and a PHONE NUMBER (and the best time for me to call). 73 and good dx -

And several Mitsubishi designs are manufactured near Normal, Illinois.
Unlike some "American" cars that actually come from Canada, Mexico,
and other places.

Not seriously or facetiously. What I am saying is that having 700,000,
or 800,000, or 1,000,000 hams, most of whom are not engineers, learn
some fundamental technical principles makes more than a trivial
improvement in the technical horse-sense of the population. Ham radio
has never promised educational miracles, but it can be one element in a
general enriching of the level of understanding, especially among those
who would otherwise have very little contact with the inner workings of
the electronic "magic" that surrounds us all.
>

>
I want the tests to be substantial enough to require from most who pass
a real knowledge of certain fundamentals. Our entry-level tests don't
do that (I know of people with *no* electronic or technical background

who studied for less than a dozen hours, passed their tests, and have retained nothing. Anecdotal, yes, but I doubt very unusual). I would like to see the mild adjustment of making the entry-level licenses again temporary (say, 5 years), giving newcomers a chance to get licensed, get on the air, and then require of them the small additional commitment of upgrading if they want to stay in the hobby. Is there anyone who will argue that material on the order of the General-level written, for example, is too difficult to learn in 5 years? And I'm *not* including the code in such an upgrade. Hardly a purge, I'd say.

I guess if I just want to get a free phone that I never use that is
a good suggestion but I am the type that uses my radio equipment to
talk on and cell phones cost a lot of money to operate so what I
would spend on cell phones every year I could easily purchase a
new radio every year. Not that I need a new radio every year so I
save the rest.

> And why cross-post this to non-radio groups? That only creates

What do you mean about cross-posting to non-radio groups? I'm new to
the Internet and using Netscape I simple selected "Post Followup."
Did my message go other places and how would I stop this from
happening?

> So yes, for a year's worth of service, you can buy a new rig a year...

That was exacltly my point, thanks for pointing it out so graphically.

The thing with me is that I almost always go over the minimum fee so
it was costing me close to double the minimum service charge. I think
too many people are convinced by the advertising that cell phones are
cheap to operate, just wait until you use one for a while.

CountyCAT v1.30 Released

CountyCAT is a small, easy to use database to aid county hunters in their quest for the CQ County hunters award. It will track your progress and help you with the messy paperwork that plagues all ham radio awards. CountyCAT is not a logging program, there are many good loggers on the market. It is a database designed to work alongside your favorite logger.

CountyCAT was written as a supplement to the logging program "Log-EQF" by Tom Dandrea, although it can supplement any logging program that allows you to shell to DOS, or another program. I wanted a program to help me with county hunting, but I didn't want to switch to a new logging system. I wrote CountyCAT so that I could shell from "Log-EQF" to check on a county then get back to logging. I think CountyCAT fills this need.

CountyCAT features:

* Database for County hunters going for their "First Time Around" award.

* Prints a state by state summary of worked vs unworked counties. Helpful for quickly tracking progress toward the different levels of county hunting awards.

* Will print a detailed report to printer or to text file. Suitable for submission for CQ County hunters award. (Registered users only)

CountyCAT is available for download from:
IBM-Net 1-317-882-5575
First time callers can download after callback verify.
CountyCAT is also available for anonymous FTP transfer from:
oak.oakland.edu
It is in the pub/msdos/hamradio/util directory.

Greetings All

I rather new to this radio thing so I may be looking for something that does not or is not allowed to exist but I'll ask anyway.

I'm getting into the ham thing in order to have communication on my various treks beyond cellular covered areas. I am also in a mountain rescue unit and as such could be authorized to have a radio which can transmit (durring a mission, of course) on several 155.x freqs. Having my own radio would free up one of the units radios and increase our communication capability in the field. I am looking for a handheld that is fully programmable in the 2m band as well as being capable of transcieving on several 155.x freqs. Does such a thing exist?

Jeff

Totally bogus reasoning, Jim!

You obviously haven't read or thought about the posts on here the
past few days. I think Gary Coffman and Hans Brakob have most
ELOQUENTLY explained to you why this proposal just will not fly.

There are MUCH better ways for grown men to resolve their QRM
disputes than making a Federal case out of it.

Maybe dropping ham radio and going back to "Cowboys and Indians"
would be a better solution for all of the parties involved if
they are not mature enough to behave like adults on the air!

: Jeff
Jeff,
I own the Yaesu FT11-R HT and I love this "little" radio. It seems very
well built and I can hit many repeaters with the rubber antenna using 5
watts.
As for out of band TX, I have seen a modification that will do this but
I haven't tried it yet. I'll post the mod but take no responsibility for
it's accuracy.

This mod gives you extended transmission range on a Yeasu FT-11R.

I have knowlege that this mod works, but take no responsibility for any
damage it does to your radio, the legality of this mod, or any other
incurred damages.

After the mod a FT-11R will have:

Recieve: 110.000-135.995 (AM) 136.000-180.000 (FM)
Transmit: 136.000-180.000 (FM)
Empty Memories and a completely reset radio

First, Remove the antenna, battery pack, and pocket clip (if installed)
from the radio. Then remove the four black screws from the corners of
the main section of the radio, the two black screws from the bottom center
section of the main body, and the two silver screws from the bottom of the
keyboard section. Now carefully separate the back and front halves of the
radio, taking care not to put too much strain on the internal ribbon cable,
or loose the small metal strap holder or the battery release button.
Once you have opened the radio, carefully remove the metal plate covering
the back of the keyboard. Then remove the "AF" pcboard by first removing
the two copper screws in the middle of the board, then holding the bottom
of the pcboard and the mic/speaker jacks between your thumb and forefinger

and pulling straight up. This may take a little force, as you are
seperating two connectors. Once you have the "AF" board removed, set it and
the connector/keyboard backplane board aside. Now look at the lower left
corner of the controller board. You should see the 8 jumpers (they are very
small), set up like this:

Top of radio

L A o-o o o E I don't know how the jumpers relate to the
E B o-o o o F ones on the schematic, so the letters are just
F C o o o/o G for reference in this article
T D o-o o o H
"-" means a solder jumper, and "/" means resistor

These are the functions of the jumpers that I know of:
A- Turns your radio into the euro version (TX between 144.000-146.000)
B- ?
C- ?
D- This is the important one. Gives you extened TX range
E- Turns your radio into the 440Mhz version. Not Suggested!
F- ?
G- ?
H- Same as jumper "E"

The only jumper that this mod deals with is "D". It currently has a solder
jumper across it. Remove the solder across the jumper with really small
solder wick or a desoldering station, taking care not to touch any plastic
with your soldering iron. Once this solder jumper is removed, you now
have extened tx range. Now carefully replace the "AF" board first, and
then the connector/keyboard backplane board. Take care to get the copper
grounding connector on the side of the mic/speaker jacks well seated.
Replace the two copper screws in the middle of the "AF" board, and the two
silver screws on the bottom of the keyboard. Replace the battery eject
button and strap holder, and then replace the back half of the radio.
Replace a
ll
the screws, put the battery and antenna back on, and turn the radio on.
You should see 144.000 on the screen. Turn the radio off and the hold the
MHZ/\ and MHZ\/ buttons while turning the radio on. You now have the transmit
range between 136.000-180.000.
As a suggestion, you can store completely different transmit and
recieve frequencies in a memory (see manual), so if you store a service
frequency in a memory, you can program a legal HAM frequency as the
transmit freq. so you never accidently transmit on an illegal frequency.

Another neat feature that I have found on these radios is the
"Clone" feature. You can transfer all memories from one FT-11R to
another FT-11R. First, make a cable using two male stereo 1/8"
connectors,
and connecting the top(gound) and middle conductors of the plugs straight
through. Don't connect the tip conductors together though. Plug this cable
into the earphone jacks of the two radios, and on each radio, hold down the

"FM" button while turining it on. You should see every character flashing on the screen. Now, on the radio which you wish to recieve the memory contents from the other radio, press the MHZ\/ button. You should see "RX CLN" on the screen. Then on the radio which is to send it's memory contents, press the MHZ/\ button. "TX CLN" should appear on the screen for about 5 seconds, then it should return to the flashing screen state. The recieving radio should now be in normal operating mode. Turn both radios off, and remove the cable. That's it. This function overwrites all of the recieving radio's mem contents, and copies everything from memories to pager codes to the status of the light. WARNING: The instant that you hit the MHZ\/, your memories are GONE, even if the transfer is unsuccessful! Also, both radios must have the same jumper settings to successfully complete the cloning process.

That's all I know for now! Have fun!

1997. Real Hams

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-30 00:00:00 UTC
From: bus002@stumail.westal.EDU
Message-ID: <Pine.LNX.3.91.950430083510.10389B-100000@stumail.westal.edu>
Source record: 247539

This has to be the most moronic thread I have ever read.

Even if the guys out there that say "so-n-so is not a ham" were to "win" this argument (yeah, right)... I don't think you'll see anybody tuning in their license. Why the hell worry about who's a REAL ham and who isn't? This is like two little kids saying "mine's bigger than yours" or "I'm better/smarter/prettier/etc than you"... There's just no point to it. When you can make being a "real ham" a prerequisite for having a license, then I'll take notice of these "requirements" that have evidently been arrived at by some members of the net.ham.public....

Personally, I was graciously received into the hobby, even as a no-code Tech. I guess I'm lucky...What I've received from my fellow hams is encouragement, technical advice, and fellowship. If all hams operated in this positive "mode", perhaps we'd see quite a few more "real hams" emerge where an "appliance operator" or even a LID was before.

Bottom line: this hobby is as good as we make it. If all we do is bitch and moan about the problems we perceive, we'll be chalked up as a bunch of complainers with nothing better to do than bemoan the state of the hobby. If we take an active role in improving the hobby, however (probably the best way is by elmering a new ham), we'll be making things better for ourselves as well as the newcomers.

> It stands for: Bayonet Navy Connector

And TNC is Threded Navy Connector.

N-connector = Navy, the baynet action making it easy for a matlot and unlikely
to vibrate lose

C-connector = civilan

TNC was problaly added to avoid problems of having identical connectors on
incompatable circuits

From: mjr@crl.com
Message-ID: <3o0a2d$397@crl9.crl.com>
Source record: 247542

Hello newsgroup readers! This will be my first trip to NYC since becoming a HAM almost 3 years ago. I don't go back very often (I was born and raised in NYC until I left in 1968).

I will be in Manhattan mostly, West Village and mid-town East side (near the UN), but I will also be making one trip out to the north coast of Nassau county (LIRR).

I know there are hundreds of repeaters in the area (I have a repeater directory), but I'm looking for but a few recommendations for some friendly and open machines covering the three areas I've mentioned above. I will be carrying a 2m/70cm HT, but will replace my very long Diamond rubber-whip with something stuby so I'm a tad more discrete. 70cm stations would therefore probably be better if there are any open and friendly in the area.

Thanks much.

Manufacturers of fishing rod blanks have lot of units rejected for
cosmetic reasons that are perfectly good structurally. You will have to
make some fone calss or do lotta letter writing to track them down.
These would suffice foryour "arrow shaft" sized needs.

Heavier stuff is available from manufacturers of pole-vaulting poles.
They get *LOTS* of rejects because for vaulting purposes (safety) very
stringent inspections are conducted. I got some 20 years ago and had to
sign my life away that they absolutely would never be used for any
vaulting. They are about 1-1/4 to 1-1/2" in diameter amd about 1/8"
wall. I got 20 rejected poles for $96 back in the late 70's and they
worked great.

Most of these places only sell wholesale. Unless you have the proper
credentials, you may have to find someone who does in order to purchase.

: >knowing Morse is not the factor which makes you a "real" ham.

: >Real" Amateur Radio Operator: Definition -- A person who has been
: i>ssued an Amateur Radio License by the FCC. These licenses come in
: >6 classes.
:
: >73, de Hans, K0HB

: Maybe we should better define the difference between an amateur radio
: operator and a ham. They should be one in the same, but often there is a
: difference. An amateur radio operator is, as stated above, anyone who
: holds a valid FCC amateur radio operator's license, no matter what class
: of license it is, or what was or was not learned to obtain it. But being
: a "ham" is a little more than just holding a license.
: A "real" ham is someone who:
: -operates according to the rules as set forth in part 97 of the FCC
: regulations.
: -conducts themselves in a courteous manner on the bands.
: - respects the rights of others on the bands.
: -doesn't belittle others because they hold a different class license.
: - is willing to help others interested in becoming a "real" ham.
: - understands that operating on the amateur bands is a privilege they
: earned by obtaining a license, not a right.
: -enjoys the art of communications and strives to become a better
: communicator.
: - may or may not wish to learn more about the technical aspects of the
: hobby.
: -may or may not wish to upgrade to a higher class license.
: -maintains a proper balance between amateur radio and other aspects of
: one's life, especially family.
: -fosters international good will through amateur radio.
: -contributes to the hobby , does not just take from it.
: -is ready to use their station and communicating skills in an emergency if
: needed.
: -understands that amateur radio is only a hobby and enjoys it as such.

: ....and we could go on and on.

: I am in no way implying that the code test should be dropped or the exams
: should be made easier.
: Whether or not someone passed a test in Morse code, or how much technical
: material was on the exam has little to do with being a "real" ham. The

: testing is the requirement to obtain a license, but being a "real" ham
: comes with how one uses that license.

: Bill - K5MIL

Bill you hit the nail right on the head! Nice job!

> Jeff,

>This mod gives you extended transmission range on a Yeasu FT-11R.

There are several radios out there that you can do this on. The only difference is the difficulty of the operation (and that's what it is, with everything packed so tight in these things!). The Yaesu mod in the previous post seems pretty easy to do, but I've seen ones where you have to remove and move diodes, put new ones in, and other things. Manufacturers seem to like to put all kinds of different capabilities in their radios without letting us know, so find a radio you like for the ham bands, and then ask the dealer if there are any mods for it. He may even be able to perform it for you (with proper proof of membership in an organization that needs the mods), if you don't want to do it yourself.

Good luck!

2008. Transceivers and New Car Warranties

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-30 00:00:00 UTC
From: waco@intgp12.ih.att.com
Message-ID: <D7v5Es.n55@ssbunews.ih.att.com>
Source record: 247550

I don't read this newsgroup regularly any more, but know the subject
of voiding new car warranties by installing 2-way radios has come up
in the past. Therefore, I thought I would pass along this information.

DOES INSTALLING AN AMATEUR RADIO VOID YOUR CAR'S WARRANTY?

It is a rather well known fact that some automobile dealers and/or
manufacturers claim that installing a transceiver in a car will void
the car's warranty. Sometimes this claim is in the form of a verbal
declaration of a dealer or, in some cases, is actually stated in the
manual for the car. This claim appears to be completely false according
to the Magnuson-Moss Warranty Improvement Act. Here is the text from
the pertinent sections of that warranty. I received the information
from a volunteer for the DuPage County (Illinois) Office of Emergency
Management who is an employee of a firm that installs cellular phones
and alarm systems in cars.

It appears transceivers (and everything else) is covered in (c), under
"Prohibition of conditions."

References to 'the Commission' are to the Federal Trade Commission.

Chapter 50, CONSUMER PRODUCT WARRANTIES, Section 15, Subsection 2302

"Availability of terms to consumer; manner and form for presentation and
display of information; duration, extension of period for written
warranty or service contract"

(b)(1)(A) The Commission shall prescribe rules requiring that the terms
of any written warranty on a consumer product be made available to the
consumer (or prospective consumer) prior to the sale of the product to him.

(B) The Commission may prescribe rules for determining the manner and
form in which information with respect to any written warranty of a consumer
product shall be clearly and conspicuously presented or displayed so as
not to mislead the reasonable, average consumer, when such information
is contained in advertising, labeling, point-of-sale material, or other
representations in writing.

(2) Nothing in this chapter (other than paragraph (3) of this subsection)
shall be deemed to authorize the Commission to prescribe the duration of
written warranties given or to require that a consumer product or any of
its components be warranted.

(3) The Commission may prescribe rules for extending the period of time a written warranty or service contract is in effect to correspond with any period of time in excess of a reasonable period (not less than 10 days) during which the consumer is deprived of the use of such consumer product by reason of failure of the product to conform with the written warranty or by reason of the failure of the warrantor (or service contractor) to carry out such warranty (or service contract) within the period specified in the warranty (or service contract).

"Prohibition on conditions for written or implied warranty; waiver by Commission"

(c) No warrantor of a consumer product may condition his written or implied warranty of such product on the consumer's using, in connection with such product, any article or service (other than article or service provided without charge under the terms of the warranty) which is identified by brand, trade, or corporate name; except that the prohibition of this subsection may be waived by the Commission if --

(1) the warrantor satisfies the Commission that the warranted product will function properly only if the article or service so identified is used in connection with the warranted product, and

(2) the Commission finds that such a waiver is in the public interest.

The Commission shall identify in the Federal Register, and permit public comment on, all applications for waiver of the prohibition of this subsection, and shall publish in the Federal Register its disposition of any such application, including the reasons therefor.

Chapter 50, CONSUMER PRODUCT WARRANTIES, Section 15, Subsection 2310

"Injunction proceedings by Attorney General or Commission for deceptive warranty, noncompliance with requirements, or violation prohibitions; procedures; definitions"

(c)(1) The district courts of the United States shall have jurisdiction of any action brought by any of its attorneys designated by it for such purpose, to restrain (A) any warrantor from making a deceptive warranty with respect to a consumer product, or (B) any person from failing to comply with any requirement imposed on such person by or pursuant to this chapter or from violating any prohibition contained in this chapter. Upon proper showing that, weighing the equities and considering the Commission's or Attorney General's likelihood of ultimate success, such action would be in the public interest and after notice to the defendant, a temporary restraining order or preliminary injunction may be granted without bond. In the case of an action brought by the Commission, if a complaint under section 45 of this title is not filed within such period (not exceeding 10 days) as may be specified by the court after the issuance of the temporary restraining order or preliminary injunction, the order or injunction shall be dissolved by the court and be of no further force and effect. Any suit shall be brought in the district in which such person resides or transacts business. Whenever it appears to the court that the ends of justice require that other persons should be

parties in the action, the court may cause them to be summoned whether or not they reside in the district in which the court is held, and to that end process may be served in any district.

(2) For the purposes of this subsection, the term "deceptive warranty" means (A) a written warranty which (i) contains an affirmation, promise, description, or representation which is either false or fraudulent, or which in light of all of the circumstances, would mislead a reasonable individual exercising due care; or (ii) fails to contain information which is necessary in light of all of the circumstances, to make the warranty not misleading to a reasonable individual exercising due care; or (B) a written warranty created by the use of such terms as "guaranty" or "warranty", if the terms and conditions of such warranty so limit its scope and application as to deceive a reasonable individual.

Source record: 247553

Connecticut QSO Party May 6-7, 1995

The Candlewood Amateur Radio Association, CARA, will sponsor the 1995 Connecticut QSO Party 2000 UTC 06 May through 2000 UCT 07 May, with a rest period from 0400 through 1200 UTC 07 May. Operations will be on 160 thru 2 meters, including 2 meter FM. Stations may be worked once per band per mode.

CARA will operate W1AW, the American Radio Relay League station on Sunday, 07 May, as well as the club station, W1QI throughout the contest.

A plaque and certificates will be awarded. Voice contacts count as 1 point each, CW contacts as 2 points each, and contacts with W1AW or W1QI as 5 points each. Connecticut stations score multipliers of 1 per Connecticut county plus one per other state or DX station. Stations in other states count one multiplier per Connecticut county (8 total.)

Another message will follow with details of the Worked All Connecticut Counties award. Contacts for both awards are encouraged.

Details will be found in the April and May 1995 issues of major ham magazines (note that in the April 1995 73 Magazine, the column heading stating April dates is in error, although the text is correct.) For a full operating guide package, contact Frank Etzler, N8WXQ at his callbook address.

Message-ID: <3o0st4$qpa@newsbf02.news.aol.com>
Source record: 247554

Worked All Connecticut Counties Rover Station

In conjunction with the Connecticut QSO party (see previous announcements), the Candlewood Amateur Radio Association will operate a rover station to cover all 8 Connecticut counties. This station will operate the club callsign, W1QI, and will operate on the schedule shown below.

While the WACC Award is not tied to the CT QSO Party, contacts made for either award are elligible for the opposite. The operation of this rover station is intended to make it easier to obtain the WACC Award.

Each time period will be split between 3 bands, starting with 80m, then 40m, then 20m. Planned frequencies are 3915, 7280 and 14280 KHz, each +/- QRM.

Submit logs for the Worked All Connecticut Counties Award to:
Candlewood Amatuer Radio Association
P.O. Box 3441,
Danbury, CT 06813, USA

Period, UTC	County
Saturday, 06 May	
2000 to 2045	Litchfield
Sunday, 07 May	
1200 to 1300	Hartford
1300 to 1430	Tolland
1430 to 1600	Windham
1600 to 1730	New London
1730 to 1830	Middlesex
1830 to 1915	New Haven
1915 to 2100	Fairfield

Good luck for the WACC Award, and 73 de KD1YV

>
>

Newbies, jeez, indeed. The fellow knows what he was griping about. The whole database in presented to the world at the FCC's
ftp site as a single compressed file. You can't get at one byte of the darned thing without first downloading 30 + MBytes of
compressed file, then expanding it to a file of 140 or so MBytes. It would be great to use telnet or www to look up information,
but the FCC's first got to make the data available in a browsable form.

I will not mindlessly rant about the stupidity of government. The FCC has budget problems just like everybody else and they
are going to be grinched up even tighter. They've done what they could with the resources available to them, but the utility of
what they've done is such that they might as well have saved the disk space.

The only thing that will make it useful to the majority of hams is for some third party to reformat the database into a browsable
form and make it available.

2014. LA 2 mtr. rpt. Hollywood to El Toro?

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-30 00:00:00 UTC
From: harrisok@vax.sonoma.edu
Message-ID: <1995Apr30.142230.1@vax.sonoma.edu>
Source record: 247556

I would like to know a few frequencies for open 2 meter repeaters
in the LA area that have coverage from about Hollywood area to
the El Toro area. I'll be going down that way this next weekend
with my father-in-law and we will be staying in different locations
down there.

Please email any replies--
Thanks.

73,
Ken

2015. Re(2): QST is becoming a rag

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-30 00:00:00 UTC
From: Gerry_Jurrens@monet.prs.k12.nj.us
Message-ID: <533422.ensmtp@monet.prs.k12.nj.us>
Source record: 247557

I would like to offer a suggestion for improving QST, as long as we're at it! A non-ham friend of mine shared his latest copy of "Model Aviation" the journal of the Academy of Model Aeronautics. I think the biggest difference between "their" journal and "ours" is the reliance on pictures, pictures, pictures! And lots of them are full-color pictures. In QST, we're lucky to get a couple of color snapshots (of varying quality) in the front of the magazine. Also, the reports from the Section Managers (which have always been a microscopic annoyance to read - and a torture for SMs to write due to ridiculous space limitations) have a wonderful analog in MA: each District Vice President gets an entire page, and can fill it with photos if desired. Names, addresses, phone numbers and e-mail addresses and a photo of the director is included at the top of each report! Wouldn't this be nice in QST?

What do others think about this?

I need a schematic for a CDR TR4 rotor. What I am attempting is to convert a TR-2 To a TR4. I have a tr2rotor that is fine but the old tr2 control box had been crushed it will work but half of the case is missing. I also have a TR4 control box with no rotor. they both use 8 wire cable. Yes I could tear everything apart on both and trace it all by hand but a diagram would really help. I figure I will have to get a couple of parts for the rotor it's self to convert it. but the price is right I got both for free73 tnx in advance AD4RR dray

Should you ever become be interested in HF propagation, there is
much to be learned about it that is not available to the code-less
licensee. This is particularly true for our longer wave bands
whose characteristics are much different from the 20 meter and
shorter wavelength HF bands.

Message-ID: <D7u4GF.7K8@spaceworks.com>
Source record: 247565

>I agree with the first fellow. While I am an avid CW hound, and
>do not support a removal of the Morse requirements for HF licenses,
>knowing Morse is not the factor which makes you a "real" ham.

>Real" Amateur Radio Operator: Definition -- A person who has been
i>ssued an Amateur Radio License by the FCC. These licenses come in
>6 classes.

>73, de Hans, K0HB

Maybe we should better define the difference between an amateur radio operator and a ham. They should be one in the same, but often there is a difference. An amateur radio operator is, as stated above, anyone who holds a valid FCC amateur radio operator's license, no matter what class of license it is, or what was or was not learned to obtain it. But being a "ham" is a little more than just holding a license.
A "real" ham is someone who:
-operates according to the rules as set forth in part 97 of the FCC regulations.
-conducts themselves in a courteous manner on the bands.
- respects the rights of others on the bands.
-doesn't belittle others because they hold a different class license.
- is willing to help others interested in becoming a "real" ham.
- understands that operating on the amateur bands is a privilege they earned by obtaining a license, not a right.
-enjoys the art of communications and strives to become a better communicator.
- may or may not wish to learn more about the technical aspects of the hobby.
-may or may not wish to upgrade to a higher class license.
-maintains a proper balance between amateur radio and other aspects of one's life, especially family.
-fosters international good will through amateur radio.
-contributes to the hobby , does not just take from it.
-is ready to use their station and communicating skills in an emergency if needed.
-understands that amateur radio is only a hobby and enjoys it as such.

....and we could go on and on.

I am in no way implying that the code test should be dropped or the exams should be made easier.
Whether or not someone passed a test in Morse code, or how much technical material was on the exam has little to do with being a "real" ham. The testing is the requirement to obtain a license, but being a "real" ham comes with how one uses that license.

2024. Talk Radio broadcasting

Newsgroup: rec.radio.amateur.misc
Date: 1995-04-30 00:00:00 UTC
From: forrest.gehrke@cencore.com
Message-ID: <6e.16589.332@cencore.com>
Source record: 247566

With all the furor over "Talk Radio" and whether
their hosts were responsible for pushing some
"crazies" over the edge to set off the explosion
at Oklahoma City, there have been accusations that
the real culprits are broadcasts via "short wave
amateur" radio.

If this is so, where are they broadcasting on the
ham bands? And, if so, how do they get away with
that?

The Wall Street Journal for April 28th, however, lists
three short wave broadcast stations as Far Right
broadcasters:

WWCR 5065kHz Nashville, TN
WRNG 7355kHz New Orleans, LA
WINB 11950kHz Red Lion, PA

Is this, as usual with some news correspondents, getting
things half right? I.e. "short wave" but not amateur radio.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 30/2330Z APRIL 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 30 APRIL AND FORECAST FOR 01 MAY - 03 MAY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 67/0

GOES satellite data for 29 Apr
Daily Proton Fluence >1 MeV: 2.2E+05
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 1.5E+08 (moderate)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
01 May 02 May 03 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 01 May: 68/2

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 29 Apr
Learmonth 3 2111 1011
Fredericksburg 4 7
Planetary 4 7

Observed Kp for 29 Apr: 2232 3122
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
01 May 5 Quiet
02 May 5 Quiet
03 May 5 Quiet
COMMENT: Active conditions did not eventuate yesterday. Disturbance
expected 4-6 May from south polar coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
30 Apr normal normal-fair normal-fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
01 May normal normal normal
02 May normal normal normal
03 May normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
30 Apr 8 depressed 15% 00-05UT, then near predicted monthly
values.

Predicted Monthly T index for April: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
01 May 15 Near predicted monthly values
02 May 15 Near predicted monthly values
03 May 15 Near predicted monthly values
COMMENT: MUFs at Townsville were depressed 30% 00-05UT then near
predicted monthly values. MUFS at Hobart were depressed 10-15% for
most of the UT day with spread F observed throughout local night hours.
Degraded HF comms conditions expected 4-6 May.

>
>Does that make sense? I can't find anything quite like it in the ARRL
>Antenna Handbook.

It's the standard balun arrangement for feeding a 200ohm folded driven element. Everyone uses it.

>Have I mixed something up?

Nope

>Can I tune the antenna by
>adjusting the length of the coax?

It should be 1/2 wavelength. To bench test the balun, take it off the antenna, fold it into a U and join the center conductors with a 200ohm 1/2 watt resistor (these are fine at 2m) right at the resistor and cut off the wire from the resistor. Join the braid and feed the balun by soldering the center conductor of some coax to one side of the resistor and soldering the braids together. THen send 1/2w up from your HT and you should have an SWR of 1.0:1.

>I have all the other elements taken off
>now. Would the SWR change dramatically if I put back on the other elements?

YES!

You have to test the antenna with ALL the elements on. To minimise ground effects test the antenna way off the ground or if near

the ground, point it straight up.

>
>Thanks in advance for your help. (Email replies, please.)

Brian, interesting subject here...

During our impromptu breakfast get-togethers on Sat. mornings, one of our
HAMS (who is also a VE) has been touting how Cellular phones (and InterNET)
will completely replace HAM Radio.

Appreciating that he has been a HAM for over 15 years, and I have only had MY Ticket for about 4 years; On most subjects I tend to believe him, on this particular issue I cannot.

In our particular Tri-State region (Wisc-Min-Iowa) we have close to adequate 2M repeater coverage; Whilst using Cell-Phone, you can travel 20 mins out from our City (La Crosse, WI; a county-seat for 488 sq.mile county) and "drop-out" of the Cell-Phone ranges. Our area is valleys' and bluffs (like foothills of mountainous areas). You can reach multiple REPEATERS through the countryside; the Cell-Phones are accessible only within short-reaches of the node-sites in the area.

With the info provided this past Sat. morning, we are to believe that 47 satellites will be launched into orbit soon. Because of these satellites, the Cell-Phone (WILL) replace HAM Radio completely thus making ARES teams and ALL HAM Radio Operators OBSELETE!

Brian, I know this message is slightly ajar of the original concept of the message I had read; however, I do believe it continues on the same subject... Cell-Phone being better than Ham Radio. True, each has its' place; BUT Cell-Phone will NOT REPLACE Ham Radio! In the future, Cell-Phone will be accessible throughout the United States; whereas Ham Radio is now. The differences between the 2 now are: With HAM Radio, a person MUST possess a license. MOST PEOPLE would RATHER pay $$ to gain access to others' Long Distance than have to LEARN something.....(HAM Licensening).

The Concept (I personally) have been suggesting is this:
With the advent of the Cell-Phone and EVERYBODY having one, the following problem will become apparent. Surely, everyone CAN contact each other through the cell-nodes (equalling BIG$$ to some companie(s)). During a time of emergency; let us use a EARTHQUAKE....

165 MILLION People have Cell Phones. Through the 'Quake 1.7 MILLION are affected. During times of the original stress, the 911 recieves about 250,000 calls the 1ST hour on Cell-Phone. The systems ARE tied up. The HUMAN services behind them can only process XXXX number of calls.

Whilst the systems of Cellular Phones ARE TIED UP, the ARES Teams and the respondent HAMS are ALREADY in action!

So much for Cellular Phones. HAM RADIO still is better than a "Medium".

Someday, I too, will have a Cell-Phone. Until then, I will happily be content with Amateur Radio (HAM RADIO)!

SUPPORT your ARES TEAM and HAM RADIO

I was just tempted enough to add this little bit of info...

My youngest sister, who before government intervention, was an honors student. And a whiz at math. It was determined that the students must and I emphasize must, use an abacus for the next three years.

The outcome, over 75% of the students now rely on their fingers to try to add a simple column of numbers and still get the answer wrong. If you tell most of them that 1 + 1 = 2, they will ask "what's a 2....

I say keep the 5WPM requirement on the code, for the sole reason, sometimes it's the only way to get through in an emergency situation. But why carry it past that? Very few hams, including myself, who used to spend hours on the 30WPM nets would have trouble copying 5WPM....

Message-ID: <1995May1.134405.25422@chemabs.uucp>
Source record: 247230

It works. You can read the CDROM from your Amiga.
There is no program to search the data base unfortunately but
the format of the data is well documented. I hope to open up my
C manual and start writing code again, this looks like a good
place to start.

btw the Amateur logging program I wrote some time ago (VHLOGGER) is
included on this QRZ disk. It was nice to see my program there.

I bought mine at the Dayton Hamvention for $18.00 then found someone
later in the day that was selling the same disk for $10.00, drat.

: --
: Bruce James Robert Linley | ------- | __, | ,-----, | Disclaimer:
: linley@netcom.com/linley1@aol.com | B A R | / \ | `---, / | My opinions
I think it was 44-50 Mhz, the other side of the 50-54 Mhz amateur band
(which had been moved from 56-60 Mhz, where it was harmonically related
to the 10 meter band (which by the way was 28-30 MHz, and, when 11 meters,
now CB, was opened to amateurs, was cut by 300 Khz, and never restored
when 11 meters was taken away)). It was abandoned because of the frequent
F-layer propagation at sunspot maximum. The East coast was getting
BBC television frequently on a frequency about there. 73 and GL

Exactly! You have just demonstrated clearly that you are
misunderstanding the rules!

Read what you wrote again! K1MAN is operating within the
FCC rules. They have confirmed this over and over again.

You are obviously uninformed about the facts in this situation.
The rules DO allow for bulletin stations to have one-way
transmissions. It IS specifically provided for. Before you join
the little bandwagon of folks bad-mouthing Glenn, read all of
the rules.

GG>the reports from the Section Managers (which have always been
GG>a microscopic annoyance to read - and a torture for SMs to write due
GG>to ridiculous space limitations) have a wonderful analog in MA:
GG>each District Vice President gets an entire page, and can fill it
GG>with photos if desired. Names, addresses, phone numbers and e-mail
GG>addresses and a photo of the director is included at the top of each
GG>report! Wouldn't this be nice in QST?
GG>
GG>What do others think about this?
GG>

Like so many good ideas (and I think this IS a good idea), economics seems to frequently get in the way. The Section News is a function of the Field Organization, not the Directors, so you'd need well in excess of 50 pages each month. When you subtract out the ad space, I'd guess Section News now probably fills about a dozen pages.

So the question becomes, can they figure out a way to add 38 pages to QST? What would be the cost, and would it be accepted by the members?

>
> What do you think ?
>
> John Mcleod N6RCD

I've operated 6 meter mobile a little but found it to be a trying
experience since the conventional antenna polarity is horizontal for
SSB/CW work. If you have a large vehicle like an RV or van then an M2
Sqloop or a halo would be great (horizontal antennas). These are pretty
large and gross looking unless you have a large vehicle to reduce the
contrast.
Not to be too discouraged, you can still have fun on 6m when the Es
season kicks into full swing even with a mobile vertical. It's just a
little more challenging than operating from home with a horizontal
antenna. Go for it !!
P.S. ...what will you be using for a rig ?

>stage?

I believe the DSP is in the LOW LEVEL audio portion of the radio.
That is, its done at Audio Frequencies not Intermediate (radio)
Frequencies. The ad is somewhat deceptive. I don't think Icom could
afford to offer a rig with IF DSP for under $4K-$5K.

So, is an FT-1000 with APF on & a DSP-9+ just as good as a 775 on RX?
The 775 sure looks like an IC-765 with DSP-9+ and few bells and whistles
from Kenwwod and Yaesu? Don't know how ICOM can claim this is a new
generation radio. Any opinions? Inquiring minds need to know.

Me too. Unfortunately, even Amateur Electronic Supply, who _used_ to put
their sale prices in their catalog, have stopped doing that. Maybe the
prices got to be too volatile for publication, but it sure does help to
know what they are.

If I gotta call, I'll go to HRO who's (almost) local. If somebody else
publishes a price, I'll consider them. Any of you mail-order folks out
there listening?

[Article crossposted from rec.radio.amateur.antenna]
[Author was George L. Hiscox]
[Posted on Mon, 1 May 1995 01:00:13 GMT]

Thanks for reading this.

I just came into possession of a Raytheon remotely controlled tuner for tuning a single wire antenna. I don't see a model number on it, but it is described as follows:

It is contained in a white metal box with approximate dimensions 9"X 12"X 4" deep. The box has a white plastic cover which is held in place by four snap fasterers, two on each side of the face. "Raytheon" is stenciled on the front cover. There is a ceramic insulator on the top right where the wire antenna connects to the unit. There is also a female coax connector on top of the housing about 3" from the ceramic insulator. There is a female (SO-239) coax cable connector on the bottom of the unit along with a ground lug. Also on the bottom is a grommeted hole where the control cable goes inside.

Immediately inside the control cable hole there are two terminal strips, each with four screw terminals. The terminal strips have labels "TB1" and "TB2." Both of these are located one above the other at the lower left-hand corner of the inner chassis.

Above the terminal strips is a 3PDT relay. Above that is a subassambly with eleven variable capacitors. Mounted vertically to the right of the terminal strips, relay and capacitor subassembly is a motor driven rotary switch. The capacitors and the rotary switch has a number of wires coming off them with numbered tabs. There is a toggle switch labeled "TX KEY OFF ON" mounted on the bottom of the rotary switch next to the motor.

To the far right of the box there are two Air-dux like coils. The longer of the two coils is approximately 1.5" diameter and 5" long. It is L1. There is a smaller coil mounted on a piece of plastic at a right angle to the longer coil. It measures approximately 1.25" diameter by 2.25" and it is L2.

I would appreciate any help in identifying the unit, it's model number and capabilities. Does anyone out there have any docs on it? Would happily pay copying costs.

Thanks very much!

George L. Hiscox	Very funny Scotty...Now
ghiscox@netcom.com	beam down my clothes!!!

You can probably blame me for this. The term was used in one of my
posts to describe someone who might obtain a license without the benefit
of any skills whatsoever. It was hypothetical.

I agree completely with your comments.

73,

Jack WB3U

Society.

SWANSONG.
=========
I know, Swans do not sing: So this one sticks to RTTY and
similar digital sounds..
As this is my last day of weekly broadcasts for ANARTS, I
wish to say a brief farewell and to express my thanks.

The thanks are to all my viewers over the last eight years,
who have proved to be an exceptional audience. They have been
supportive when Murphy has been at work and the gear performance
has been sub-par, and they have been understanding when finger
trouble has caused a breakdown this end. I look on you all as
friends from those who watch, to those who call in/back from time
to time, to the regulars I see nearly every week and also to
those with whom I have correspondence on many subjects and radio
contacts not necessarily related to the newscasts.

I also thank the ANARTS group who keep the show on the road
and only rarely have we not kept faith with our audience.. It is
admitted that sometimes it may have required some searching to
find which outlets were operational, but the 'cast was available
from somewhere..

It is especially heartening to see the innovations which
have come into being... such as the FEC transmissions on 20M, the

40 metre PBS which allows viewers to access missed text on Sunday afternoon, the VKNET Packet version which travels Australia, the Internet output which gives world-wide coverage and for which we thank a non-member, and of course the VK6 coverage by courtesy of Clem VK6CW, who has been a tireless worker in the cause. In fact the VK6 direct two metre, two metre PMB outlets, plus the 80metre to areas near Perth which do not have good VHF coverage, are each a success story in themselves, and we add to that the resurgence in the "radio" social life in Perth, as seen by the attendances at fortnightly city luncheons.... WELL DONE CLEM....

The above activities, as well as our more traditional HF/VHF coverage in the Sydney area, are achieved by dedicated behaviour and co-operation from several personnel, in particular Col VK2CTD Pat VK2JPA and Alan VK2DPM. (And VK2JDG handles much of the phone modem work VK2 to VK6). I thank and congratulate them all on their efforts.

I am not sure how Pat and Col will plug the hole in the 20m schedule, but I am sure the matter is well in hand.

For myself, I will remain active in ANARTS, especially as Contest Manager (from a distance), and although I see major probs in getting back on air again with enough power to rejoin the cast team, I feel sure that VK2BQS will be heard again later in the year, perhaps QRP...

Before sending AR (not SK please), I would like to para-phrase a toast used by an esteemed body of which I am a member. I think they would appreciate the variation in this case and will not object.

ANARTS, MAY IT CONTINUE TO THRIVE, ROOT AND BRANCH, FOR ALL TIME.

Thank you all de Jim. VK2BQS AR.

JIM, VK2BQS, HAS BEEN A TOWER OF STRENGTH IN ANARTS AS LONG AS HE HAS BEEN A MEMBER OF THE TEAM. WITHOUT HIM TO CHASE DXNOTES ON AMTOR, AS WELL AS OTHER ITEMS, I FEAR THE BROADCAST TEAM WILL HAVE A DIFFICULT TIME AHEAD. OF COURSE COL, VK2CTD, WILL BE THERE HELPING, BUT I AM AFRAID I WILL HAVE TO GET MY MORSE AT LAST, HI HI.

WE ARE NOT LOSING JIM SO MUCH AS MAKING HIM OUR REMOTE REPORTER, BUT I WISH HIM THE BEST IN HIS RETIREMENT TO A QUIETER SECTION OF NSW. I AM SURE WE WILL BE HEARING FROM HIM AGAIN IN THE FUTURE.

THANKS FOR A GREAT JOB JIM

DE PAT VK2JPA

DIGITAL JOURNAL INFO

WE HAVE RECEIVED A REQUEST FOR INFORMATION RE THE DIGITAL JOURNAL MENTIONED IN THESE PAGES LAST WEEK.

BARRIE VK6BR ASKS THE FOLLOWING QUESTIONS, I WILL TRY TO SUPPLY THE ANSWERS.

1. HOW DOES ONE SUBSCRIBE?

SEND APPLICATION TO ADRS, PO BOX 2550, GOLDENROD, FLORIDA 32733-2550 USA.

2. WHERE IS IT PUBLISHED ?.

IN FLORIDA, USA.

3. DO YOU HAVE TO JOIN A PARTICULAR AMATEUR GROUP TO RECEIVE THE DIGITAL JOURNAL ?.

IT APPEARS THAT THE FEE COVERS MEMBERSHIP/SUBSCRIPTION TO THE AMERICAN DIGITAL RADIO SOCIETY.

4. CAN PAST COPIES BE OBTAINED ?.

NO INFORMATION THERE. AS THE PRESENT OWNERSHIP IS ONLY ABOUT A YEAR OLD, ONE WOULD HAVE TO ENQUIRE FROM ADRS.

5. IF SO HOW DOES ONE GO ABOUT IT ?.

WRITE TO THE ABOVE ADDRESS, OR PHONE 0011-407-677-7000, OR FAX 0011-407-671-0194.

6. ANY FURTHER NECESSARY PARTICULARS THAT YOU THINK INTERESTED PARTIES SHOULD KNOW.

THE DIGITAL JOURNAL, AS I FIRST KNEW IT, WAS THE RTTY JOURNAL PUBLISHED BY SEVERAL DEDICATED AMATEURS. IT CHANGED ITS NAME TO THE RTTY DIGITAL JOURNAL, THEN EARLY LAST YEAR I THINK IT WAS, WAS TAKEN OVER BY THE AMERICAN DIGITAL RADIO SOCIETY. IT IS NOW THE OFFICIAL JOURNAL OF THAT SOCIETY. A LOT OF WORK GOES INTO IT AND IT IS A PUBLICATION WORTHY OF THE NEWSTANDS, ALTHOUGH NO COLOUR. THE APRIL ISSUE HAS 30 PAGES AND IT DOES REVIEWS OF NEW EQUIPMENT, COMPUTER ISSUES, DIGITAL CONTEST NOTES AND RULES, HAS CLASSIFIEDS, DX NEWS AND MORE - AS YOU COULD SEE FROM LAST WEEK, IT ENCOURAGES DISCUSSION AND ALSO GOES TO BAT WITH THE GOVERNMENT OVER SPECTRUM SPACE AND USAGE.

AND NOW FOR THE HEAVY BIT --SUBSCRIPTIONS ARE TO BE IN US FUNDS ONLY. AIRMAIL RATES - 1 YEAR IS 35 DOLLARS (US), 2 YEARS 68 DOLLARS (US), 3 YEARS 100 DOLLARS (US). FIRST CLASS SURFACE - 1 YEAR IS 25 DOLLARS, 2 YEARS IS 48 DOLLARS, AND 3 YEARS IS 70 DOLLARS. IF YOU ARE A DX CONTESTER, THE AIRMAIL RATE IS BEST.

I HOPE YOU HAVE ALL THE INFORMATION NECESSARY AS GIVEN HERE, AND THANKS BARRIE FOR THE REQUEST. GREAT TO HEAR FROM YOU.

CHEERS PAT VK2JPA BROADCAST OFFICER.

IPS WEEKLY REPORT
---

21 APRIL - 27 APRIL

DATE OF ISSUE: 28 APRIL 1995

INDICES:

DATE 21 22 23 24 25 26 27
10CM 85 84 77 73 70 69 68
A 1 13 21 24 13 17 (22 ESTIMATED)
T 33 30 45 40 27 21 34

SOLAR ACTIVITY WAS VERY LOW 21ST, AND 23RD TO 27TH. ACTIVITY WAS HIGH ON 22ND APRIL, WITH AN M7.1/2F FLARE AT 1151UT, AND AN M1 FLARE LATER ON THE SAME UT DAY.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET ON 21ST, QUIET TO UNSETTLED ON 22ND, UNSETTLED TO ACTIVE 23RD-24TH, QUIET TO UNSETTLED 25TH TO 26TH WITH AN ACTIVE PERIOD ON 25TH. ACTIVE TO MINOR STORM PERIODS WERE OBSERVED DURING LOCAL NIGHT ON 27TH, QUIET TO UNSETTLED OTHERWISE.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE NEAR TO SLIGHTLY ABOVE PREDICTED MONTHLY VALUES ON 21ST APRIL, NEAR PREDICTED MONTHLY VALUES 22ND, AND 25TH TO 26TH; 15 TO 30 PER CENT ABOVE 23RD TO 24TH AND PART OF 27TH,WITH THE REMAINDER OF 27TH NEAR PREDICTED MONTHLY VALUES.

FORECAST (28 APRIL - 04 MAY)

SOLAR: VERY LOW.

GEOMAGNETIC: ACTIVE 28-30 APRIL DUE TO A CORONAL HOLE. THEN QUIET TO UNSETTLED UNTIL 3 MAY. ACTIVE-MINOR STORM LEVELS EXPECTED ON 4 MAY.

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES. HOWEVER, THE QUALITY OF HF COMMS IS EXPECTED TO BE DEGRADED DURING THE INTERVALS 28-30 APRIL AND 4-7 MAY.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

VK2SG RTTY DX NOTES FOR WEEK ENDING 21 APRIL 95 (BID RTDX0421)

: I have roughly 2 decisions to make about DSP filters for my HF rig. I
: have heard wonderful things about the Timewave 59+, but have read good
: things about the JPS NIR-10. They both seem to include the basics in
: digital signal processing, but I was wondering how the people that own
: either one in this newsgroup feel about them. I am stuck between these
: two, and Amateur Electronic supply only has the Timewave demo on
: display..so I dont know about the JPS. Thanks to all who reply. 73!

: Joe, N9YJZ n9yjz@earth.execpc.com

I'll sell you my brand new JPS NIR-10 for $25.00 less than the lowest price you can find for a new one (I'll pay shipping). Then I'll go out and get the Timewave like I should have in the first place!

Obviously, you're not interested in my NIR-10 after reading that, but I'll honor my offer to anyone who reads this. I'll want to verify the price you find, of course! The punchline is: I'm not impressed with the NIR-10. The automatic notch filter is awesome, but the other functions are very disappointing.

Eveready has AA sized 1.5V lithiums --- try Wal-Mart, Target, or Home Depot stores (So. California locations stock them, anyway.) The best price I have seen is $3.49 per twin pack at Home Depot. Radio Shack has them too, but they are $7.something!

OK, Frank - lissen up! Write this down:

Callsign.ualr.edu 2000

and if you telnet into that port, you'll find that, yes, someone HAS taken
that data and massaged it into a highly useable form.

You're welcome!

>outpace cw when the conditions are poor.

Dead wrong. Try PACTOR II or G-TOR sometime. They are superior modes,
including automatic error detection and correction and confirmation
of correct reception.

>CW is an elegantly simple mode. One can communicate with the least
>expensive and unsophisticated of equipment.

Well, the transmitter may be pretty simple, but there's little (if any)
difference between a CW receiver and an SSB receiver. Heck, there's
very little difference between an FM transmitter and a CW transmitter.

Not that any of the above points matter one bit with respect to the
requirement, though. Code is currently required for largely historical
reasons.

>Also the whole cw argument is largely a red herring foisted by those
>who have entered amateur radio at a time when requirements have been
>drastically lowered. Exams that have pre-published answers that smart
>seven years olds can memorize. (see QST seven year old gets her extra)

Hey, I entered amateur radio well before the question pools were
public, and I support reforming the CW requirements. You can't
invalidate my point by suggesting I'm some dumbed-down no-coder
that memorized question pool, so please avoid the generalization.

>IF you want to get on HF do the time. Learn the code. Stop belly-aching.

I hope you feel better. Now that the emotional outburst is over, why
don't you go have a look at reality today?

gdavis@griffin.emba.uvm.edu (Gary Davis) writes:

> Hasn't the CW argument really gone a bit silly?

Maybe, but it is likely to continue.

>First cw gives a better readability under weak or marginal conditions.
>There is no known mode including ssb or packet that can routinely
>outpace cw when the conditions are poor.

Allow me to quote from the 'ARRL Extra Class License Manual,"
p. 8-4:

<regarding packet radio>

- It is fast, much faster than the highest-speed CW or RTTY. This
high speed makes packet ideal for meteor-burst communications.

- It is error-free; no "hits" or "misses" caused by propagation
variances or electrical interference.

In addition, even the IARU ad hoc committee on CW has affirmed in
their report that some digital modes offer the same advantages as CW
under poor signal conditions. In fact, some digital modes are *better*
than CW (I'm gritting my teeth as I'm writing this, BTW, but we might
as well face up to the fact that the "better under poor conditions"
argument no longer holds up.).

>CW is an elegantly simple mode. One can communicate with the least
>expensive and unsophisticated of equipment.

True, as also affirmed by the IARU.

>Also the whole cw argument is largely a red herring foisted by those
>who have entered amateur radio at a time when requirements have been
>drastically lowered. Exams that have pre-published answers that smart
>seven years olds can memorize. (see QST seven year old gets her extra)

I was licensed in the "hard 'ol days" of the 1950s when I was 15;
there were a number of 12 & 13-year olds licensed then as well. In fact,
I even recall some 10-year olds.

Seven *is* a bit young, but then I believe that Mozart wrote his
first concerto around the same age.....perhaps this young lady is a
budding genius.

In any event, using declining technical requirements as some "excuse"
for CW is also a fallacious argument.

>IF you want to get on HF do the time. Learn the code. Stop belly-aching.

I'll let this one pass.....

While I enjoy morse code operation immensely, and do not favor a
total elimination of the requirements, the only valid reason is the one
cited by the IARU in the ad hoc committee's report: The interntional
requirement, not yet rescinded, for all members of the amateur service
to be able to "intercommunicate." At present, only Morse code, with
it's standard abbreviation set and "Q" signals, offers a universal,
comparatively easy-to-learn intercommunications medium for persons from
different countries who do not share a common language.

As the IARU points out, this is not to say that at some time in the
future some newer technology won't appear which allows such "intercommunica-
tion," but at present only Morse code fulfills that requirement. And,
the "intercommunication" requirement has been and still is an integral
part of the *HF* amateur requirements, by international agreement. Therefore,
until a substitute "intercommunication" medium is identified, Morse code
will likely remain as part of the international regs.

No, because the FCC rules governing the commercial freqs prohibit operater
entry of frequencies. That is, the user can select a pre-programmed
channel from a long list (120 or more these days), but cannot enter it from
the keypad. Use or possession of non-type accepted equipment is a
violation of the FCC Rules, so no manufacturer can legally build or import
such a device.

Sounds as though you didn't receive my e-mail. I use the same model,
although I have modified it by relocating the balun in the circuit.

Dentron's rating on this tuner was 3KW, but don't try anything near that
with high VSWR. Mine fried both the original balun and the SO239
output connector in attempts to tame a longwire at the legal limit.

> I urgently need to boost the performance of my
> cellular phone for use in remote areas.

What kind of phone are you using? "Pocket" phones provide only .6 watts output, while installed car phones and "bag" phones provide 3 watts out, the maximum allowed. Also, an external car antenna makes a hugh difference in performance. If you are trying to use a pocket phone from inside a car, get an external antenna to use with it. If you are using a pocket phone, change to a bag/car phone for more power. If you are already using one, your only option is a higher gain antenna. These are larger and more expensive, but do provide better performance. See your cellular dealer for options and prices.

IM>--
IM>John Taylor (W3ZID) | "The opinions expressed are those of the
IM>e-mail: mah48d@rohmhaas.com | writer and not of Rohm and Haas Company."

The reason most places don't publish prices is because those ads are
written up almost 3 months in advance. With the volitile condition of
the currency markets (eg the Yen and the Dollar) the prices constantly
fluctuate. So, if they publish a price, and the dollar drops, the cost
of equipment goes up and then they are out the $$$ because they have to
meat the price in the ad...

I'm not surprised the distributor didn't know how to test it, but
finding so many bad is *very* odd. I was in the audio business
for better than ten years, and we all learned early on not to use
US transistors in Japanese equipment. Even when the paper
specs seemed OK, they just didn't hold up. That included
most of the US generic replacement lines.

You know, in all that time, I can't remember *ever* pulling a
bad Japanese transistor out of stock. I think there's more to
the problem you experienced than meets the eye.

> DSP at IF frequencies is still not practical for practical uses, the
> processor would have to run much faster than current ones do to accomplish
> it. Perhaps an engineer could explain further, but that is the story
> as I know it.

Actually, the situation is not so clear. DSP is practical, though expensive, at low IF frequencies. For example, my Kenwood TS-850 has a special final IF at about 36 kHz that is just for DSP. (When the DSP unit is disconnected, this IF isn't used.)

But on the other hand, the situation for higher frequency IFs is worse than you make it out. Current very good single-processor DSPs run at about 40-50 MIPS. A nice sharp filter, say with an order of about 100, will require a minimum of 100 instructions/sample, so that a fast DSP will be able to run at about 400-500 kilosamples/second running that filter. Taking aliasing into account, this will optimistically be about to work on an IF of 200 kHz. In practice, of course, such a system will run far slower.

However, the real problem isn't processor speed, because it's easy to imaging having DSPs that are 10-100 times faster within the near future. The problem is that A/D converters can't go anywhere near that speed with the kind of resolution required by a high-performance receiver. To get decent dynamic range, you'd like an A/D of at least 16 bits -- marginal in my opinion -- and currently such beasts don't go much faster than about 200 kilosamples/second (and then only if you pay a small fortune). However, it's not just a matter of making faster A/Ds; the problem is that high-resolution A/Ds running at high sampling rates very quickly come up against quantum limitations! Basically, the low-order bits of the A/D end up representing individual electrons. I haven't done the calculation recently, so I don't remember the exact figures -- but the maximum frequencies aren't all that high. Not to mention that there are further problems having to do with sampling clock skew -- you need tolerances in the picosecond range -- all of which add up to real headaches that have nothing to do with the speed of the processor.

The real question you should be asking is: what is the difference between IF and AF processing that makes one superior to the other. I believe there are two answers to this. First, at IF, you can do detection and modulation -- and this works just as well at an IF of 36 kHz as it does at 455. Second, at IF any processing you do will be inside the AGC loop, and thus there won't be out-of-passband signals desensing your receiver. But this can be done with low IF (or AF)

processing as well, provide that the output of the processor is part of the total AGC solution. Ulrich Rohde summed this up well in his recent QST articles by advocating multiple AGC stages within the receiver, each of which is responsible for keeping it's particular area of the IF within acceptable boundaries.

Anyway, that's my $.02 -- sorry for the long-windedness, but I hope someone finds it interesting.

: HT worth it to avoid the performance hit of using an HT for mobile use?

It depends (of course). Having more power really seems to help, since
it puts you on parity with the repeaters. If you can hear 'em, you can
probably work 'em. You really need at least 30 watts. So, you at least
need an amplifier. RS has one with a filter that should help the
intermod problem. 100 bucks on sale. On the other hand, you could save
your money and get a real mobile radio and be even happier. Personally,
I got a deal on an amplifier (2M only, though, so I can't do dual-band),
and am reasonably happy with that. I *do* want a solid (no intermod)
dual-band mobile rig eventually, though...

Find a used Yaesu 2400 for 2M. Good, solid radio.

I understand that the question pools for ALL commercial written exam elements are to change 1 July 1995. Bear that in mind when buying/studying. (Although I haven't seen the new pools, I wouldn't be surprised if they were significantly harder than the current ones, esp. Element 3, which takes many questions verbatim from the Advanced and Extra pools.)

2083. Re: QST is becoming a rag

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-01 00:00:00 UTC
From: brian.carling@acenet.com
Message-ID: <2a6.11732.545@acenet.com>
Source record: 247462

Newsgroups: rec.radio.amateur.misc
From: brian.carling@acenet.com

MB>conklic9391@cobra.uni.edu (CHRIS CONKLIN (N0PAV)) added to the discussion
MB>about QST by saying "Thank God that QST doesn't burden us down with too many
MB>construction articles
MB>anymore :-("

MB>But I am terribly troubled by it no longer being a technical magazine. I ha
MB>plenty of QST's from before my time, and they did not hesitate to run articl
MB>on terribly esoteric matters out of concern that most amateurs would not be
MB>interested. Because amateur radio was still considered a technical hobby, a
MB>ven if most amateurs would not take up moonbounce or similar activities, at
MB>least they could read about what was going on.

Yes. That IS a problem. Now they have almost NO construction articles.
Maybe ONE useful one out of every 3-4 issues, and almost never for a
complete rig any more. Then they DO have some technical articles that
are SO esoteric and technically sophisticated that you would need a
PHd in Electrical Engineering to have any interest in them or begin to
comprehend what on earth they are talking about. Us humble technicians
and engineers will no doubt, be told we should read QEX or some such!
Why? Why should we have to allow QST to have this gaping hole at the
mid-level of technical expertise?

MB>Now it's been decided that things must not be too technical out of fear of
MB>scaring people off. The really technical articles are siphoned off to QEX.
MB>That's a nice tiny little magazine, but it suffers from being targeted at a
MB>very small group. Print the articles in QST, and it would not cost much for
MB>them to reach all readers. It's a multi-tiered system now, be an ARRL membe
MB>and get QST, then you can subscribe to QEX.

Yes, I agree 100%. I have never seen a QEX. I am an avid constructor,
but I just can't afford ANOTHER subscription on top of all the other
expenses.

MB>If QST is not an enjoyable magazine with technical articles, then maybe it's
MB>not that the articles shouldn't be there but we've started to redefine the
MB>hobby for the sake of getting more people.

We have indeed. It has come into full bloom now, with almost ALL
amateurs being "appliance operators" who know nothing about the
technical aspects of the hobby. We are largely button pushers and
very literally not much beyond the phone company's operators!

MB>If technical matters were seen as
MB>the fun stuff that they are, maybe people would enjoy them rather than fear

MB>them.

Yes, but that is no longer the image that the manufacturers and the
League have presented. Homebrewing just doesn't bring in enough dough,
as Griefkit found out!

MB>Maybe it's not what is being talked about that is too technical, but
MB>merely the language used to describe them. Technical matters can be made
MB>understandable, but if you start using academic language, that's where peopl
MB>get lost.

Michael, I like to see QST articles like the recent one on how to make a
GREETING CARD into a digital voice memory device. Now THAT is real
hamming!

You wrote to: aswNS@hamp.hampshire.edu (Albert S Woodhull)

JE>>Someone sending a bulletin

JE>on a dozen frequencies for hours on end and repeating said bulletin
JE>several times per week

A DOZEN? SImultaneously? Nah! Sure, if you stretch the truth a bit
Jeffrey!

JE>>that 100 people

JE>which is only 1/7000 of the US ham population (have you even counted how
JE>many folks are *really* listening?)

Sure, he uses his FCC mobile Receiver-Detector van to travel the country
and count how many receivers are tuned to W1AW and K1MAN EVERY EVENING.
By tallying these and dividing by the number of evenings, he comes up
with a number whose square-root multiplied by the asymptote of the
hypotenuse of a GRAPH of these two parameters when plotted together
parametrically will give an approximation of the number of actual
receivers TUNED to W1AW and K1MAN at any given moment. Now since we know
that for every receiver tuned to a given frequency, there are precisely
1.3 people hearing the bulletins via these receivers, a reasonable
approximation can EASILY be arrived at for the number of folks who
are *really* listening...NOT!

JE>>want to listen to is reducing
JE>>QRM on 50 other frequencies.

JE>Bull. Send the dang bulletin via internet or by a digital mode.

Feeling a little "testy" the day you wrote that Jeff? Sheesh!
Cool it!

• SLMR 2.1a • Remember, you are unique, just like everyone else!

Tom Eyring wrote:

>Anyone actaully get to play with the new Icom 775 DSP at Dayton?
>What is the cost and avialbility for the DSP version? How does
>it compare to the FT-1000D?

I had a look at it, but other than punching a few buttons I didn't really get to play with it much. You really can't do much with the display models there.

It's a nice looking rig, bigger than I thought it would be. There seems to be a lot of confusion about whether the DSP is implemented at the IF or at audio. For the record, it's an audio DSP system. The rig still uses regular IF crystal filters.

One of the Icom reps told me they were looking for a street price of around $3800. They still aren't available for sale.

Have just finished completetion of new Vanity Call program. This
disk contains ALL of the unassigned calls in a call area and ALL
the "changed" calls which have been vacated. Price is $18 + $2
S&H. For example, the 4th area disk contains about 80,000
available calls and all of these are from the presently assignable
calls. 10% discount for 2 or more. Uses latest database from FCC.

2088. Amateur Radio: Elmers List Info and Administrivia

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-01 00:00:00 UTC
From: pschleck@gonix.com
Message-ID: <radio/ham-radio/elmers/admin-1-799326011@gonix.com>
Source record: 247467
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

Posted-By: auto-faq 3.2.1.2
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.13 04/29/95 13:09:10
Changes: New comp.infosystems.www.* newsgroups
Posting-Frequency: posted on the 1st of each month

This administrivia file and the companion Amateur Radio Elmers Resource Directory are intended for non-commercial distribution via Usenet. Any other uses, please E-mail for permission.

In order to standardize the Internet resource notation used in this Directory, I've decided to adopt Uniform Resource Locator (URL) format throughout. In addition to being a straightforward, human-readable, format for specifying File Transfer Protocol (FTP) archives, Gopher and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also amenable to formatting as hypertext links in Hypertext Markup Language (HTML). For example, users viewing this document at the Ohio State World-Wide Web Server (see "How may I obtain the latest copy of the Elmers List?" below) will see all URL's converted to hypertext links on their WWW client. Rather than fumbling with the various conventions of FTP, Gopher, WWW, and Usenet News software, the document or directory referenced by a hypertext link is but one mouse-click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide further information about how to obtain and use WWW client software such as Lynx and Mosaic (see his entry). While I'm happy to incorporate the latest and most popular information-formatting standards into the documents that I maintain, I really can't allow myself to be dragged into the role of a WWW help-desk for all of the Internet. Please understand this when I politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of this somewhat radical new standard, especially to many users who can't or won't use WWW. Those users should be assured that I wouldn't have adopted a standard unless it was easily human-readable by those accessing this document as straight ASCII (which is one of the main reasons why the entire Elmers list isn't HTML, MIME, MMDF, or one of many other competing, mostly non-compatible, information formats). The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under
the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port
5555 (if the standard Gopher port of 70 was used, the ":5555" part
would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with
callsign.cs.buffalo.edu via non-standard port 2000 (if the standard
Telnet port of 23 was used, the ":2000" part would be replaced by
":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from
your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all
http: URL's in this directory also have corresponding ftp: or gopher:
URL's).

For more information about URL formats, see:

http://www.cc.ukans.edu/lynx_help/URL_guide.html
ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://info.cern.ch/hypertext/WWW/Addressing/URL/URI_Overview.html

Disclaimer: While I have personally confirmed the accuracy of all
URL's through the Lynx WWW client, any referenced documents external
to this document are subject to future changes beyond my control. In
addition, with networks and their administration being what it is,
many services with up-to-date URL's may be temporarily unreachable.
Please consult with your local gurus, consulting staff, or help-desk
to confirm that it's a non-local problem, then ask the Elmer him or
herself (me in the case of URL's which appear outside of individual
entries). The currency and accuracy of URL's should be at least no
worse than that of the Elmers entries themselves (which are each
individually confirmed by me every 2 years, and updated within 1 month
on request of the Elmer).

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications
art, it is that "Hams" (Amateur Radio Operators) have always been on
the forefront of it. Rumors abound where the term "Ham" came from.

Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament

about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@gonix.com, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-*]" and "Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly to keep both parts under the 64K message limit for Usenet requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

news:rec.radio.amateur.misc
news:rec.radio.info
news:rec.answers
news:news.answers

on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles)

in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use. (I'd appreciate feedback on whether or not you find them useful, though.)

5. Internet Gopher: The latest copy of the list should be available from the following Gopher sites:

gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/
gopher://gopher.univ-lyon1.fr/

gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available
from the following WWW site:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/elmers/top.html

The advantage of reading the Elmers list at this site via WWW client
software is that all URL's are converted to hypertext links.

see also the newsgroups under comp.infosystems.www.* (I haven't listed
URL's for all of the newsgroups under this hierarchy as there are now
about 20 of them (!!!).)

7. Wide-Area Information Service (WAIS): The latest copy of the list
should be available from the WAIS server at:

wais://rtfm.mit.edu/usenet

see also news:comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for
making this service a success.

John Ackermann AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building (particularly
higher speed stuff) and TCP/IP. I've got quite a lot of info on using
the Kantronics D4-10 19.2kB radios, as that's the hardware we've been
struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a result,
the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related
mailing lists. Its purpose is provide a medium for communications among
those interested in packet radio networking, both dealing with technical
issues and political/regulatory ones. We'll discuss things like how the
potential 219MHz band will fit into the networking picture, how to link
areas using different networking schemes, how to set network parameters,
etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending
mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details
about the Net-SIG (including upcoming conferences).

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP

""

VHF packet (AX.25 and TCP/IP)
HF SSB and RTTY
FM/repeaters
Clubs/activities
Public relations
Writing (for newsletters and ARRL publications)

My job at as QST Features Editor at ARRL HQ includes (among other
things) writing and editing general-interest feature articles for QST,
and writing the FM column, Up Front in QST and Strays.

I'm the "handling editor" (copy editor+) for other regular columns
conducted by other contributors, including Packet Perspective by Stan

Horzepa, WA1LOU; Public Service by Rick Palm, K1CE; Club Spectrum and Section News by Steve Ewald, WV1X; How's DX? by Bill Kennamer, K5FUV; Happenings by Jim Cain, K1TN; Contest Corral and Special Events by Warren Stankiewicz, NF1J; Hamfest Calendar and Coming Conventions by Gail Iannone; most of the contest rules announcements and results articles; and I compile the Annual Index in the December issue.

I coordinate and often contribute to the New Books reviews and New Products listings scattered throughout the magazine, and often contribute to QST Product Reviews. I also wrote the "Modes" chapter in the 1995 ARRL Handbook and chapters in the ARRL Operating Manual, and I've contributed to several other publications, including W1FB's Help for New Hams (ARRL) and Ham Radio Horizons (CQ Communications).

I started working at ARRL HQ as QST Copy Editor in December 1989.

I'm 37 years old, I've been a ham since 1976 and I hold an Amateur Extra Class license. I'm a member of the ARRL, the ARRL A-1 Operator Club, Ten-Ten International Net (53313), and the Middlesex Amateur Radio Society/Connecticut Amateur Radio Emergency Service (MARS/CARES, an ARRL Special Service Club, in which I served two terms as president and a couple of years as newsletter editor). I'm also an ARRL Public Information Officer for the Connecticut Section. These days, most of my on-air time is limited to 2-meter and 440-MHz FM and 2-meter TCP/IP packet radio, although I crank up the HF rig when I can spare some time and try to join in VHF/UHF contests when I have the time and access to equipment. My favorite Amateur Radio activity is Field Day; the MARS/CARES club has a terrific time with that event every year.

I have about 10 years' experience with personal computers, including MS-DOS, Windows and IBM OS/2. I was a full-time professional commercial broadcaster for 12 years.

My latest volunteer public service project is that I'm the official Amateur Radio Liaison the the 1995 Special Olympics World Games, to be held in Connecticut. I report to Dr Chuck Bruder, N3AGA, the Special Olympics' Deputy Commissioner of Telecommunications. (This is supposed to be literally the biggest event in the US in 1995, and possibly the world! They expect 10,000-15,000 athletes, 45,000 international delegates from almost all nations, more than 500,000 spectators, about 20 hours of prime-time network TV coverage, and probably a visit from President Clinton and the First Lady...whew!)

Rich Bono NM1D Internet: rbono@nectech.com
+1 508 635-6300 nm1d@aol.com

Author of the following MS-DOS ham programs:

AutoExam - Examination simulator and study aid
AutoCW - Morse Code practice program
DOSGATE - allows users to run programs on your PC remotely (AutoExam compatible)
AutoCall - Allows use of the Buckmaster HAMCALL CDROM online callbook with DOSGATE
AutoFax - Allows reception of weather fax using Kantronics TNC's
SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available via anonymous FTP from:

ftp://oak.oakland.edu/SimTel/msdos/hamradio/
ftp://wuarchive.wustl.edu/systems/msdos/msdos/hamradio/

or write me at:

7 Redfield Circle
Derry, NH 03038

and enclose:

A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or 5.25").
A Self Addressed STAMPED return diskette mailer.
A note explaining that you want a copy of AutoExam and/or AutoCW (or one of the other programs).

I am always receptive to individuals interested in maintenance, enhancements, and non-commercial distribution for these shareware programs.

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Look for the new server in two or three months. Until then you can access the current one.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

Electronic Circuits
Antennas and Transmission Lines

My electronics expertise is mostly analog, but I have some insights into DSP applications that can do better in what used to be the analog dominions. I can be of the most help with low-frequency analog stuff, particularly measurements and low-level/low-noise/low-distortion applications. I breadboard with IC's, discretes, and surface mounts (which I prefer to use now, as surface mounting requires less drilling of PCB boards once they are etched). My electrical engineering education (Ph.D.) emphasized control systems. I also have a clear understanding of transmission line measurements and behavior (a personal research interest for the last 25 years or so).

++

Barry Buelow WA0RJT Packet BBS in Cedar Rapids, IA
barry@ia.net WA0RJT@WA0RJT.IA.USA.NOAM

The Tuscon Amateur Packet Radio (TAPR) Bulletin Board Special Interest Group (BBSSIG) is sponsoring a working group to generate and distribute a series of information bulletins which will serve to instruct packet radio users in a variety of areas. These bulletins will be distributed via the packet network and can be retained at each BBS in a file area. An index will be provided to allow users to find information they desire.

If you are interested in actively participating in this effort and can work on a collaborative effort, please speak up. Send a message to my E-mail address above.

[Editor's Note: As this project is still very much a work in progress, and its eventual products will certainly be made available via several information sources (including the Internet) as soon as they are completed, I'm sure Barry would appreciate it if only serious volunteer contributors contacted him at this time.]

Arthur Chandler KO6OA

arthurc@crl.com

BayMOO, an all-text virtual-reality on the Internet (a form of Multiple-User Dungeon, or "MUD") has just completed an amateur packet radio simulation "room." This room can serve to help orient non-hams, or non-packet-operating hams, to some of the operating conventions and experiences of amateur packet radio networks.

BayMOO may be accessed from:

telnet://baymoo.sfsu.edu:8888/

When you log into BayMOO, just follow the instructions ("HELP," "MOVEMENT," and "HELP COMMUNICATION" will give you most of the basics.) To go to the packet radio simulation room, type:

@go Virtual Ham Central

You will need to contact "Akira" or "Dr.J" in the room to get
transmission privileges.

You may use BayMOO with guest privileges by using your callsign as your
guest login name (if you have one). If you want a permanent login,
write to:

rk@world1.worldbit.com

giving your callsign as your username.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet
Enthusiasts Society (GRAPES), but I am in contact with them, and have
experience using their 56 kBaud radio modems. At the very least, I can
forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by
WA4DSY explaining the theory and practice of the 56 kBaud radio modem.
(I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem,
but there are better solutions. The Ottawa PI card and the Gracillis
PacketTwin card are two good solutions. Of course they are PC bus
cards. If you need standalone capability, the Kantronics Data Engine
can handle it, as can the incredible Gracilis PacketTen.

If you want information on the RF modem (full document sets are $20,
creditable towards a later order) write to GRAPES at

GRAPES, Inc
PO Box 636
Griffin, GA 30224-0636

GRAPES is a volunteer networking organization. There's no phone number,
and turnaround on info requests may be slower than when dealing with
commercial outfits. Please cut the volunteers a little slack.

William (Bill) Coyle N3OGH

wcoyle@dccc.edu

AX.25: N3OGH@AA3CH.EPA.USA.NA

My primary experience is with HF communications, particularly with the
Kenwood TS-830S and TS-940/AT. My preferred mode is CW, although I
also use SSB. I have had experience with light service on both rigs
(including the internal antenna tuner on the 940 and the tube finals
on the 830). I have the service manual for the 940.

I am particularly interested in helping new hams design and set up HF
stations with multi-band wire antenna arrays.

Other than HF, I am also involved in VHF and UHF, particularly 2
meters, and have recently gotten involved in packet radio (having
gained some experience on the hardware end of setting up such a
station).

Scott Ehrlich, Internetworking ASM, Eastern Mass. E-mail: wy1z@neu.edu
Boston ARC ftp archives: ftp oak.oakland.edu /pub/hamradio
Boston ARC Web page: http://www.acs.oakland.edu/barc.html
ARRL Web page: http://www.acs.oakland.edu/barc/arrl.html

I've played around with Mac and PC hardware, as well as dabbling a
little with DOS, UNIX, and MacOS.

I co-maintain the Boston Amateur Radio Club anonymous FTP file archives
with Phil Temples, K9HI (k9hi@netcom.com).

A sampling of the archives include:

A virtually complete archive of all ARRL bulletins since 1992 is
available at ftp://oak.oakland.edu:/pub/hamradio/barc/w1aw-list/

A mirror of all files available from the ARRL info server is also
available: ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/

The ARRL infoserver mirror has FCC Part 97 (U.S. Amateur Radio Service
Rules and Regulations) at:
ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/rib/part97.txt

Programs mentioned in QST are in:
ftp://oak.oakland.edu/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too:
ftp://oak.oakland.edu/pub/hamradio/docs/newsline/

Macintosh Amateur Radio Software Archive:
ftp://oak.oakland.edu/pub/hamradio/mac/

Ham Radio and More, the radio show carried live every Sunday (6pm - 7pm
EST) on the Talk America Radio Network, now has a World Wide Web home page:

http://www.acs.oakland.edu/barc/ham-more/ham-more.html

The Boston Amateur Radio Club also has a World Wide Web Home Page:

http://www.acs.oakland.edu/barc.html

Due to the popularity of the KY1N VE listing and W1GSL's hamfest list,
I have incorporated both of these listings into the Boston Amateur Radio
Club's Web page:

http://www.acs.oakland.edu/barc/ne-happenings.html

With the cooperation of the Boston Amateur Radio Club, I have put
together a World-Wide Web page for the American Radio Relay League
(ARRL).

Since the ARRL does not yet have web capabilities of their own, this page
is being offered on the same site as the Boston Amateur Radio Club's web
page.

The address to access the page is:

http://www.acs.oakland.edu/barc/arrl.html

It has pointers to the ARRL Letter, E-mail addresses of HQ staff,
official League bulletins, and much more!

You will need Lynx, WWW, or Mosaic to view them (or you may obtain a
copy of the page via E-mail; send a message to listserv@info.cern.ch
with the word "help" in the body for more information). Ask me for
more details about this.

Eran Glago KD6KVO

glago@aol.com

I am into public service, and also ARES/RACES. I am the Emergency Coordinator for both organizations in Sonoma Valley, Sonoma county, San Francisco Section.

We do ARES and RACES as one program here, and actually lean more towards RACES because the government entities are so supportive.

I like to encourage newer hams to participate in the events for which I coordinate the communications. It's ideal training for emergency services, and it's fun, too. Codeless Technicians who can't participate on most HF NTS traffic nets have a real role to play here, as we generally use VHF and UHF, and these amateurs are instrumental with their enthusiasm in filling the rosters.

It's also sometimes a good initiator for those new hams who are self-conscious talking with other, experienced hams one-on-one, but are OK talking formally to a net control station. Similarly, I try to encourage those new hams who became hams so they could talk to their ham spouses, and all you ever hear them do is talk to their spouses and to no-one else. While that's perfectly OK in and of itself, public service is a good way to break out of that mold and get more fun from radio

while really helping out.

steveh@grafex.sbay.org 408.252.0578 alternate: harding@nas.nasa.gov
For amateur radio related information, send a message to:
ham-server@grafex.sbay.org
Place HELP and GET INDEX on separate lines in the text.

HAM-server is now on a 486 with nearly 70 MB of data. Besides DOS,
there are some UNIX, Mac, and OS/2 files.

Most files have been taken from the various ftp-servers world-wide.
However, there are many programs that have been donated by HAM-server
users.

ARRL Laboratory Engineer

Radio Frequency Interference (RFI) matters
Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their

responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

See Scott Ehrlich's entry for information about the ARRL Anonymous FTP Archive and World-Wide Web Home Page.

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

+ Well, I've been talking about it for years. Those of you that have
+ talked with me via E-mail know that. But this time I've actually
+ started on my rewrite of the callsign server at Buffalo. And I've
+ finally got a design that I'm happy with. The new searching
+ capabilities are going to be *much* improved over the current system.
+ I'll be getting rid of the bugs in the current telnet system and making
+ it available to more people. Also coming is a WWW front-end for web
+ surfers. Time to step into the 90s.
+
+ Part of the rewrite is an entire reorganization of the database look-up
+ system. The old system was very specific to the FCC database format
+ because that's all that was available when it was written (yes, the
+ server is very, very old). But now there are a number of databases
+ floating around the net for different countries and I am rewriting the
+ system to be more flexible and to accommodate a variety of formats and
+ search types.
+
+ In doing so, I'll have the ability to add data for many more countries.
+ That is, of course, if I have the data. In order to do this I need
+ help. I need to get in touch with all people that have access to
+ databases from countries other than the US. The more up-to-date these
+ databases are, the better. If you have access to a database and would be
+ willing to donate a copy to the callsign server for everyone to use,
+ please contact me. A lot of people would genuinely appreciate it.
+
+ The callsign server has become remarkably popular on the net and this
+ has happened because the community has contributed so much to it over
+ the many years it's been running. I have heard stories of reunions with
+ old classmates, stories of silent-keys that have been remembered, and
+ stories from blind hams doing simple look-ups of other hams, all
+ possible because of the server. Congratulations to the community for
+ making this system so useful.
+
```

+ Look for the new server in two or three months. Until then you can
+ access the current one.
+
Please direct all other feedback, submissions and administrivia
regarding these services to my E-mail address above.

+

+ I am into public service, and also ARES/RACES. I am the Emergency
+ Coordinator for both organizations in Sonoma Valley, Sonoma county, San
+ Francisco Section.
+
+ We do ARES and RACES as one program here, and actually lean more towards
+ RACES because the government entities are so supportive.
+
+ I like to encourage newer hams to participate in the events for which I
+ coordinate the communications. It's ideal training for emergency
+ services, and it's fun, too. Codeless Technicians who can't participate
+ on most HF NTS traffic nets have a real role to play here, as we
+ generally use VHF and UHF, and these amateurs are instrumental with
+ their enthusiasm in filling the rosters.
+
+ It's also sometimes a good initiator for those new hams who are
+ self-conscious talking with other, experienced hams one-on-one, but are
+ OK talking formally to a net control station. Similarly, I try to
+ encourage those new hams who became hams so they could talk to their ham
+ spouses, and all you ever hear them do is talk to their spouses and to
+ no-one else. While that's perfectly OK in and of itself, public service
+ is a good way to break out of that mold and get more fun from radio
+ while really helping out.

+ Fred Lloyd, AA7BQ flloyd@qrz.com
+ Scottsdale, Arizona | finger flloyd@qrz.com for PGP Key | http://www.qrz.com
+ ---
+
+ Author of the QRZ! Ham Radio CDROM. I am interested in receiving
+ amateur-radio-related public-domain and/or shareware programs, data
+ files, frequency lists, etc., that would make a useful edition to the
+ QRZ CDROM. Can help arrange volume discounts for clubs and groups, and
+ will donate copies of QRZ to qualifying non-profit organizations. Send
+ E-mail or call +1 602 483-2036.
+
+ We now have the QRZ FTP archive and QRZ WWW server online, 24 hours a
+ day. Our connection is via a T1 line so you should get pretty decent
+ file transfer times.
+
+ We've got about 7,000 files online, including radio mods, software, most
+ everything imaginable. We are also accepting uploads of all ham radio
+ related material.
+
+ Feel free to stop by and have a look:
+
+ ftp://ftp.qrz.com/

```
+ http://www.qrz.com/ (WWW interface to the FTP archive as well as a
+ Callsign database server)
+
+ Authors of ham radio shareware programs, data files, mods, etc., are
+ invited to contribute their materials to the QRZ anonymous ftp server
+ above.
+
+ I would also like to thank those who have volunteered in helping port
+ the QRZ source code to a wide variety of platforms. In the next
+ edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT,
+ SGI, Linux, AIX, and HP/UX executables, directly on the disk.
+
+ Notably not mentioned is Macintosh, which so far has been a bit
+ troublesome to put together. If anyone who can program in 'C' on a
+ Macintosh would care to volunteer, please let me know. Although there
+ is an experimental Mac interface at this time, I'd like to make it an
+ officially-supported platform.
+
+ Please pass on any ideas, suggestions, comments, etc., to my E-mail
+ address above.

+ +1 203 665-7531 - FAX
+
+ ARRL Technical Information Service Coordinator (tis@arrl.org)
+ ARRL Email Information Server SysOp (info@arrl.org)
+
+ The ARRL Technical Information Service (TIS) is a valuable membership
+ benefit that helps hams find answers to difficult technical questions.
+
+ The answer to a ham's most common technical questions can be found in
+ one of the many books about Amateur Radio. Folks who call or write to
+ ARRL TIS staff are often referred to one of these books or to a past

+ magazine article.
+
+ However, most hams find that the fastest way to get the answer is to do
+ their own research. Publication catalogs often talk about what kinds of
+ information are available in different books. A few good books will
+ answer the vast majority of questions as well as enhance a ham's
+ knowledge and enjoyment of this fascinating hobby.
+
+ Magazines are also a superb technical reference. An annual index of
+ articles appears in the December issue of QST and other magazines.
+ These indexes will usually have an article or two (or six) about a
+ particular topic. If an older QST or QEX article is not available
+ locally, the ARRL Technical Department Secretary can provide a copy for
+ a small fee. Back issues are also available from the QST Circulation
+ Department.
+
+ The ARRL Technical Information Service is a valuable source of
+ information and research for questions that cannot be answered by other
+ means. ARRL TIS has information packages and bibliographies that are
+ available on request to answer most technical questions.
+
+ For those who want to know if something has been previously published on
+ a particular subject, TIS can also assist with research to locate this
+ information. TIS also helps locate companies that sell hard to find
+ parts or supplies used in our hobby.
+
+ Many amateur radio informational documents are also available from the
+ ARRL Email Information Server (or Info-Server for short). To find out
+ how to use the Info-Server, send E-mail to info@arrl.org with any
+ subject (it is ignored) and the following text in the body of the
+ message:
+
+ HELP
+ QUIT
+
+ See Scott Ehrlich's entry for information about the ARRL Anonymous FTP
+ Archive and World-Wide Web Home Page.

+ This message does not constitute any official or unofficial statement or
+ policy of American Turnkey or any other organization, corporation or
+ institution.
+
+ I just upgraded to Advanced, and am now working on Extra. Was first
+ licensed about ten months ago.
+
+ What I've learned:
+
+ 1) How to operate HF from your apartment without being evicted
+ 2) How to pass tests, both written and code
+ 3) How to make a virtue out of the necessity of your limited equipment,
+ and enjoy the process while doing it
+
+ I operate CW HF exclusively. The only time I get to operate is when the
+ baby is asleep, so the XYL demands silent running. Besides, with my
+ wimpy wire, there is little point in trying to run voice.
+

: >technical *and* operational facets of radio communication.) So "just"
: >operating a radio is hardly a small facet of the service; it's a
: >primary raison d'etre for Amateur Radio.

: Jon, it says self-training, (and) intercommunication, *and* technical
: investigation, not self-training, (or) intercommunications, *or* technical
: investigation. What is intended is obviously an intersection of sets
: and not non-intersecting choices. Someone who is just a *user* of a
: radio appliance is outside the charter. Someone who just builds equipment
: and never transmits is outside the charter too, but that's rather irrelevant
: since no amateur license is needed if one never transmits.

: Of course building equipment isn't the only form of technical investigation,
: but just being a knob twirling key pushing operator of Japanese equipment
: isn't a technical investigation at all. Cellular phone users master it in
: about 2 minutes. It takes CBers a bit longer since they have to go get a
: lobotomy first so they can talk like redneck retards. Unfortunately, a lot
: of people think that qualifies them to be members of the amateur service
: as well. If you haven't a clue what's happening behind that faceplate,
: and/or don't care to find out, you aren't an amateur. You're just a CBer
: who got on the wrong bus (no matter how fast you can beep Morse Code).
: Technical curiosity is the keystone of what it means to be an amateur.

: definition of fashion, Model T's and flint lock rifles are still in
: fashion.

I think you may have bent it too far in the other direction. :-)
Model Ts and flint-lock rifles are not used by very many people who drive
cars of who shoot guns. Perhaps a better analogy would be to say that
although technology has given us better alternatives than walking, walking
(by choice, not by necessity) is still quite in fashion, being used by many
people.

: Given that no other radio service requires the use of Morse Code makes
: claiming it "in fashion" pretty far fetched. I suppose those other services
: dropped their use of Morse Code for other less capable means. Yeah, that's it!

No law requires walking, either, but that has not made it "out of fashion"
in my book. :-)

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 01/2330Z MAY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 01 MAY AND FORECAST FOR 02 MAY - 04 MAY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 30 Apr
Daily Proton Fluence >1 MeV: 2.7E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 6.1E+08 (high)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
02 May 03 May 04 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 02 May: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 30 Apr
Learmonth 3 2111 1011
Fredericksburg 2 4
Planetary 4 5

Observed Kp for 30 Apr: 2111 2112
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
02 May 5 Quiet
03 May 5 Quiet to unsettled
04 May 40 Minor storm
COMMENT: IPS Geomagnetic Warning 13 was issued on 1 May and is
current for interval 4-7 May. Minor storm levels expected on 4 May
due to south polar coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
01 May normal normal-fair normal-fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
02 May normal normal normal
03 May normal normal normal
04 May poor poor poor
COMMENT: Degraded HF comms may have been experienced during
local night hours for mid-high lats.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
01 May 12 near predicted monthly values

Predicted Monthly T index for May: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
02 May 15 Near predicted monthly values
03 May 15 Near predicted monthly values
04 May 15 Near predicted monthly values
COMMENT: IPS HF Communications Warning 17 was issued on 1 May and is
current for interval 4-6 May. MUFs at Townsville were depressed 15%
02-04UT then near predicted monthly values. MUFS at Hobart were
depressed 10-15% 02-06UT then near predicted monthly values. Spread
F was observed throughout local night hours at both Sydney and Hobart.
Degraded HF comms are expected on 5 May.

: A beam will outperform a vertical, assuming you mount it at
: the same height and know which way to point it. One only
: 5 or 6 *inches* long wouldn't be very useful, however. I

6 inches works out to 0.073 wavelengths--you can actually
get about 4.5 dB of gain compared to a dipole. Front to
back ratio isn't too bad either--15 dB wouldn't be unusual.
True, bandwidth is pretty narrow--it might be an
acceptable tradeoff for an antenna that fits in a hiker's
backpack.

: assume you meant to use ', the symbol for feet. The best

>Jack WB3U

Ah, but I have "met" you in the figurative sense, Jack, in the same way
that I might "meet" a ham on the air and determine from his operating habits
that perhaps he didn't quite "fill the bill" in terms of meeting some
minimal standard of knowledge or operating competence. Until I "meet" him/her
in such a way, I assume that he/she is a "real" ham. If I meet them and they
prove otherwise, perhaps I'll change my opinion.

In like manner, I assume that any person I haven't "met" is friendly,
open-minded, courteous, and helpful to those less capable and knowledgeable
than themselves. By your posts, however, you seem to have indicated (to me
at least) that your prevailing attitude about hams you've never met is that
they somehow must "prove" to you that they are "real" hams. Do you not
see that attitude as just a tad arrogant? Who are you that anyone should
have to "prove" anything to win your "approval?" In my view, therefore,
you have "proven" through your posts (our form of "meeting" here on the
newsgroups) that you are not friendly or helpful to newcomers to ham radio,
you are confrontational and critical of their abilities and competence.
How do you think that makes them feel? Here we have individuals who have
gone forward in good faith, studied what they were told they needed to
study, taken and passed the tests they were told they needed to pass, and
then someone such as yourself lambasts them as "not real hams."

Perhps your intent was not to denigrate the newcomers; perhaps your
intent was to point out that they still have a long way to go, that there
are many skills to be learned, that a wonderful world of opportunity hs
been opened to them and you, as an oldtimer (which I assume you are),

strongly encourage them to take advantage of what's available. But that isn't what you said; what you said was that they are "not real hams," which is both denigrating and embarrassing. And when someone globally "attacks" a group (such as new hams) without regard to their feelings and with no a priori knowledge of their individual skills, then I think that is unjustified and reflects very poorly on the wisdom and/or emotional stability of the attacker.

Remmber, Jack, as I noted above, I "met" you via this newsgroup, and for better or worse your posts reflect who you are, in the same manner than a person's on-the-air personality reflects who he/she is. If that reflection is incorrect and gives a false impression, it isn't necessarily the fault of the reader/listener.

Now, perhaps my language was a bit strong, Jack, so I'll take the first step toward reconciliation and withdraw the reference to "monumentally stupid, etc.," or however it was worded. I still believe that prejudging all newcomers as "not real hams" reflects a certain degree of arrogance, but perhaps your motivation in saying that was misunderstood, so I'm willing to back up and pretend that we've never "met" so you can, if you wish, elaborate on your meaning. If you choose not to do so, then I stand by my impression that your attitude reflects arrogance towards newcomers and/or those less experienced and knowledgeable than yourself, and I find that to be distasteful behavior. Fair enough?

2101. Re: Dumbing Down

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-01 00:00:00 UTC
From: randolph@est.enet.dec.com
Message-ID: <3o2q0g$707@mrnews.mro.dec.com>
Source record: 247576

In article <1995Apr27.014947.6484@nntpserver.chevron.com>, Curtis Wheeler
<cgwh@chevron.com> writes...
>Code is an art. It's not the ONLY art in amateur radio, but is in an art.
>One of the things in the "Basis and Purpose" of amateur radio as defined in 97.1
>is to promote interest in the art of communication. I don't believe that we
>should make all operators master ALL aspects of the hobby but 5 WPM is no big deal
>to show you have a grip on it. There really is no good reason to REQUIRE code if
>you remain above 30 MHz.
>Curtis Wheeler - San Ramon, CA
>KD6ELA / GROL / Pvt. Pilot

Yup, 5 WPM satisfies treaty requirements. I also think knowing code is one
way to encourage folks to build and/or maintain their own radios - they don't
get much simpler. This is also part of our "charter". Code is also fun, and in
some cases can help overcome the language barrier or "mike fright". However, I
think basing higher license classes on fast code speed, while appropriate and
useful in the past, is now increasingly archaic.

As far as earning it, or whatever - well, I took the tests and passed the code
and now I'm an extra class... only I'm not a REAL extra because I didn't take
them 20 years ago. You can't win with that kind of attitude.

As far as "dumbing down", I doubt it. I think it's more like the question pools
have gotten so small by removing irrelevant (due to rule changes) questions,
and by dividing the questions between so many license classes, that it's not
that tough to just memorize them. I recall seeing questions deleted several
times... anyone recall seeing questions added recently? It's pretty obvious
that the question pools should be made much more difficult to memorize.
Merging some of the license classes might work.

2102. Re: URG: Boost My Cellular Performance!

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-01 00:00:00 UTC
From: smithson@rosharon.wireline.slb.com
Message-ID: <3o2piq$2k6@sndsu1.sedalia.sinet.slb.com>
Source record: 247577

In article <3nt5f1$2bj@newsbf02.news.aol.com>, ebratcher@aol.com (EBRATCHER) says:
>
>I urgently need to boost the performance of my
>cellular phone for use in remote areas. Can anyone
>give me info. on "boosters", or "add-ons" that can
>help me with this?

The only alternative I know of is an external antenna with more gain. You might contact your cellular provider for options. The big problem with "boosting" your output is that you can cause interference with other cell sites. The output is limited to minimize this interference. If you have some application that necessitates higher output, the provider of your service may already have a solution. I do not recommend modifying your existing equipment as it is FCC type accepted.

Now, saying all that, you can get an amplifier that has an output in the cellular range. Having an antenna that can handle the power may be a problem (if you plan to use your existing setup). To optimize your setup you would need a power handling antenna, an amplifier tuned to the cellular frequencies, and proper connections to go from phone to amp to coax to antenna. Not a job for a layman.

FWIW
Tony

2103. cw is here to stay!

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-01 00:00:00 UTC
From: gdavis@griffin.emba.uvm.edu
Message-ID: <1995May1.135654.8139@emba.uvm.edu>
Source record: 247578

Hasn't the CW argument really gone a bit silly?
First cw gives a better readability under weak or marginal conditions.
There is no known mode including ssb or packet that can routinely
outpace cw when the conditions are poor.

CW is an elegantly simple mode. One can communicate with the least
expensive and unsophisticated of equipment.

Also the whole cw argument is largely a red herring foisted by those
who have entered amateur radio at a time when requirements have been
drastically lowered. Exams that have pre-published answers that smart
seven years olds can memorize. (see QST seven year old gets her extra)

IF you want to get on HF do the time. Learn the code. Stop belly-aching.

2104. Anybody know K8RXM's address ?

Message-ID: <9504017993.AA799370960@ccmail.anatcp.rockwell.com>
Source record: 247247

[editors red pen mode on]

Since this is not radio related I'll keep it short: several recent posts to this group (apparently from college students) have used "noone" as a word. According to my Webster's Unabridged, the acceptable versions of the term are: "no one", or "no-one" (AP style guide only recognizes "no one"). Please remove "noone" from your spell checker's personal dictionary (where I am sure you added it by now because the built in dictionary didn't recognize it) it make's you look foolish.

Newbies, jeez, indeed. The fellow knows what he was griping about.
The whole database in presented to the world at the FCC's
ftp site as a single compressed file. You can't get at one byte of
the darned thing without first downloading 30 + MBytes of
compressed file, then expanding it to a file of 140 or so MBytes.
It would be great to use telnet or www to look up information,
but the FCC's first got to make the data available in a browsable
form.

I will not mindlessly rant about the stupidity of government. The
FCC has budget problems just like everybody else and they
are going to be grinched up even tighter. They've done what they
could with the resources available to them, but the utility of
what they've done is such that they might as well have saved the
disk space.

The only thing that will make it useful to the majority of hams is
for some third party to reformat the database into a browsable
form and make it available.

73, Frank Emens, W4HFU

Which is precisely what some kind soul has done. I believe the address
(as posted here) is telnet: callsign.ualr.edu port 2000.

The FCC made the data available, FREE, in FTPable form, with regular
(daily?) updates to append to the original list. That is far far better
than ever before. The data base used to be sold on tape for something
like $500.00. The ham community seems well equipped to provide the site
and engine. Heck, for the $500.00 tape fee you saved, you can buy four
to six times the disk you need if you really want the data at home.

Now, what was your gripe again? :-)

waco@intgp12.ih.att.com (-Broughton,J.L.) wrote:

I don't read this newsgroup regularly any more, but know the subject of voiding new car warranties by installing 2-way radios has come up in the past. Therefore, I thought I would pass along this information.

DOES INSTALLING AN AMATEUR RADIO VOID YOUR CAR'S WARRANTY?

It is a rather well known fact that some automobile dealers and/or manufacturers claim that installing a transceiver in a car will void the car's warranty. Sometimes this claim is in the form of a verbal declaration of a dealer or, in some cases, is actually stated in the manual for the car. This claim appears to be completely false according to the Magnuson-Moss Warranty Improvement Act. Here is the text from the pertinent sections of that warranty. I received the information from a volunteer for the DuPage County (Illinois) Office of Emergency Management who is an employee of a firm that installs cellular phones and alarm systems in cars.

It appears transceivers (and everything else) is covered in (c), under "Prohibition of conditions."

References to 'the Commission' are to the Federal Trade Commission.

Chapter 50, CONSUMER PRODUCT WARRANTIES, Section 15, Subsection 2302

[text deleted]

"Prohibition on conditions for written or implied warranty; waiver by Commission"

(c) No warrantor of a consumer product may condition his written or implied warranty of such product on the consumer's using, in connection with such product, any article or service (other than article or service provided without charge under the terms of the warranty) which is identified by brand, trade, or corporate name; except that the prohibition of this subsection may be waived by the Commission if --

(1) the warrantor satisfies the Commission that the warranted product will function properly only if the article or service so identified is used in connection with the warranted product, and

(2) the Commission finds that such a waiver is in the public interest.

The Commission shall identify in the Federal Register, and permit public comment on, all applications for waiver of the prohibition of this subsection, and shall publish in the Federal Register its disposition of any such application, including the reasons therefor.

[more text deleted]

Is this the part of the law your unbiased cell phone installer claims applies? :-) I think you need to read it again. As I read it, this says Mr. Coffee (tm) can not make their warrantee void if you use other than Mr. Coffee (tm) brand filters unless they can prove that their machine will only function properly with Mr. Coffee brand filters, or that it is in the public interest that only Mr. Coffee brand filters be used. (Mr. Coffee trade name used for example only.)

2111. Forwarding cards for DX

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-02 00:00:00 UTC
From: geo@nando.net
Message-ID: <3o44t6$cck@parsifal.nando.net>
Source record: 247253

I recently received a card from Moldava direct, and the DX had included cards for contacts he had with KP4, HZ1, PJ8 and C91. He had a note asking me to send them to the outgoing bureau with my next batch of cards.

This doesn't bother me too much, except for the question of what the ARRL outgoing guys will say if I stick them with my cards! Of course it's the other guys, not the ER3 who will miss out if I toss the cards!

Any suggestions will be appreciated.

2112. Morse Programs for Sound Cards?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-02 00:00:00 UTC
From: a-rickf@aladdin.tandem.com
Message-ID: <D7xDnG.Arr@ac.tandem.com>
Source record: 247254

I'm looking for a Morse program that can work through the sound card on my PC (a standard Sound Blaster). I want to record the morse characters, and my PC makes far too much noise to use a microphone. (I'm not at all willing to couple the PC speaker to the recorder, but the sound blaster has a line output that works just fine).

Does anyone know of a Morse trainer program that provides a link to the sound blaster?

Are there other avenues available?

Many Thanks - Rick

Same frequency. MIR operates simplex, SAREX operates duplex. At least that's
the way it was a month ago. Unless it changed, it's the same.

Try 145.220-(103.5) or 146.925-(114.8).
Both are on Santiago Peak above El Toro and have
wide coverage.

: the coax, soldered to the PL259, and bolted to the door hinge.
: This works! Nice ground strap.

I dunno. I'd worry about that much braid having an appreciable
(not big, but not zero, either) inductance at the frequencies of interest.
Better to use flat copper strap, the shorter, the better. .

Also, how well is the door hinge connected to the body? Time to do
some resistance measurements there and at the radio end of the coax.
A digital multimeter should show essentially zero resistance between
the body and the coax shield. Measure your probe resistance by shorting them
together, and then settle for no more than 0.1 ohm more than that (i.e.
last-digit jitter) when making the measurement. The DC resistance of the coax
braid (measured with the PL-259 disconnected from the radio)
from one end to the other might be a little higher, but not much.
In operation, the coax braid must be well-grounded at both ends, not just one.

Good luck!

Source record: 247264

I read alot about people complaining on 'how hard it is to get a ticket' and other stories. I believe that nothing is more potent that the truth and here it is:

We have a young girl (20 years old) looking after our 2 year old son. She has been a bar maid since the age of 16 in a small village in Ireland and bedore that she helped her dad in their small farm. She saw me using an HT which prompted me to ask her whether she would be interested to get a license and operate herself. A few months ago, I gave her the ARRL video tapes and after two viewings, she did her test and passed Tech.

Now here is a person that doesnt know anytyhing about radios (apart from listening to FM music). Someone who loves Brad Pitt. Where VH-1 seems to be the hight of her viewing. Whose only interest in life seems to be meeting the opposite gender (at least that's what looks like to me). And this person passed her tech.

I think to pass a test, any test, the right tools must be available. In her case, it was video tapes. In someone else's case, it may be a book. Whatever, a ham license is not too hard to get. The important thing is choosing the right tools to use.

At Dayton this year it was discovered that Buckmaster had changed it format. I mean the order in which it displays data. This means that it will not work with certain logging programs that it did at one time. It does not work with packet clusters either. This is the newest version. It does work alone in DOS just fine. They claim that this is the new format of the FCC. Well as we all know you can change formats of a master file anytime you want. Wonder why QRZ did not have to change theirs.

Just thought I would let everyone know before that shelled out that kind of money and it does not do what you think it will.

Ken,

The commerical FCC license has also gone to VE route. Gordon West and W5YI are doing some of
the VEC work. There are some good study guides out there, as I am not sure if the actual questions are published like the amateur questions are. Now the entire tests are slated to change in July 1, 1995 with study materials to catch up some time in the fall. So it appears
there will be quite a period of not have many clues of what will be on the test. The various agencies are making the test more up to date, with questions that reflect todays Gordon West has quite an article in thhis months QCWA magazine. He says " This July all of the written commerical questions will reflect new updated questions. Most of the Element 3 amateur radio questions will be thrown out and new brain busters introduced."

Have Fun ! I hold a General Class Radiotelephone with Shipboard radar endorsement for some time now, 1979 for license and 1987 for radar.

2133. speech processor with DSP ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-02 00:00:00 UTC
From: claude@bauv111.bauv.unibw-muenchen.de
Message-ID: <claude.799418733@bauv111>
Source record: 247275

Is it a good idea to build a speech processor around a DSP ?
Does practical solutions exist ? Where ? Which ones ?

Thanks a lot.

Newsline report number 923 for release on Friday, April 21 1995
to follow.

The following is a QST
======================

The FCC again says no to restructuring ham radio, a big tower victory in New York, and Newsline is headed to Hamvention '95. Join with us on Newsline report number 923 coming your way right now!

(*****
FCC WON'T RECONSIDER

The FCC has denied a petition for reconsideration to change the structure of amateur radio licensing in the United States. Rolf Jesperson, N3LA, had petitioned the FCC to establish three classes of amateur operator license, a petition designated as RM-8391 that the commission denied back in April of 1994.
So Jespersen the Commission for reconsider its decision. He claimed that supporters of his position did not know when to file supporting comments. He said that telegraphy ability and not necessarily telegraphy proficiency should be the criterion for the class of operator license obtained. He also claimed that his suggested new rules would promote growth in the amateur radio community and reduce delays in obtaining new and upgraded licenses.
But the FCC said that Jespersen's original petition had been denied because there was insufficient evidence to justify revisiting the issues he raised and that no comments had been filed on his petition. The FCC added that it has revisited the question of the structure of the Amateur Radio service on several occasions, the latest being in 1990 when the codeless Technician class license was established. The agency says that at that time the Amateur Radio community has once again confirmed its preference of preserving the code as an integral examination requirement to for the remaining operator license classes, adding its feeling that the Amateur Radio community in the United States sees the current telegraphy speed requirements as necessary and appropriate.
While the N3LA petition has been denied, it does not mean that the fight by proponents of codefree licensing is over. Several other petitions are known to be in the works that the FCC will soon be forced to deal with. And No-Code advocate are also busy politicking the delegates to the World Radiocommunications Conference to be held later this year. Those who are against the code are trying to get the need for Morse testing abolished, world-wide.

(*****
NZ GOES NO CODE AT WARC

New Zealand has announced that it will seek and end to mandatory Morse code testing at this years World Radiocommunications Conference. Specifically, the New Zealand government has directed its delegation to actively seek to overturn world radio regulation RR-2735 that requires an applicant show proficiency in the Morse code before being granted a license

to operate on amateur radio bands below 30 MHz. New Zealand says that its telecommunications authority believes that other world radio regulations contain what they call the minimum required Amateur Radio operator qualification guidelines for licensing hams. More importantly says New Zealand, repealing RR-2735 has the added advantage of permitting each country to establish its own criteria for ham radio licensing.
The decision by the New Zealand government to sponsor world-wide no-code licensing is a major victory for the political efforts of Oracle, the Organization Seeking Alternatives Through Code Less Examinations.
About a year ago Oracle began lobbying the New Zealand government to take a leadership role in abolishing Morse code testing. Few people gave Oracle any chance of success. Ham radio political leaders in New Zealand and around the world discounted Oracle as being a minor league player trying to gain a political foothold in the ham radio major leagues.
Now Oracle is a major force in the fight to abolish mandatory code testing. And as the result of Oracles success in its own country, other administrations are asking themselves if the time has come to bury the Morse code as a requirement for any class of ham radio license, worldwide. More on this breaking story in future Newsline reports.

(*****
LONG ISLAND TOWER VICTORY

Mark Nadel, NK2T is a winner. So are many hams throughout New York state as a result of Nadel's precedent setting victory that allows him to keep his tower and antenna. It's an important win for Amateur Radio as we hear in this report:

"It's a great relief after going through all this non-sense. It's just kind of like a new beginning." Mark Nadel, NK2T

That's the voice of Mark Nadel, NK2T. Nadel is the Long Island New York ham who has been involved in a court battle with the town of Hempstead over his tower and antenna. And on April 12th he learned that he had finally won the right to keep his ham antenna system. Nadel tells Newsline that its been a long fight but the only reason he won was because of something known as PRB One:

"The decision itself is strictly a PRB One decision. The town itself had protested the fact that PRB One was in place. They felt it was unreasonable, however they had no choice but abide by it." NK2T

The wording in the Nadel decision is such that it codifies into New York State law the recognition of PRB One. Nadel is quick to add that his PRB One success with Hempstead will help other New York hams facing similar problems:

"I believe this really gives, the town of Hempstead is township and i'm sure a lot of other municipalities are going to look at this." NK2T

Nadel was supported by an organization called RADIO. It was put together by Frank Falon, N2FF. RADIO raised most of the funds to fight the Nadel case. NK2T says that now RADIO will turn its attention to helping others:

"There are some other situations that have come about on the, further out on the eastern end of the island. The other thing that has come out of this case is that RADIO is now going to get involved is with the possibility of some new legislation within the town. The town has shown the desire to sit down with the people from the RADIO group and work on a new ordinance." NK2T

Nadel says that he thanks the entire ham radio community for is support the past two and a half years. A special thanks he says goes to Frank Falon, N2FF, who stood by NK2T, all the way.

(*****
CCR

Meanwhile, the ARRL says that it is looking at the feasibility of various approaches to reducing the effect of restrictive covenants restricting amateur radio antenna systems. It now appears that neither judicial or legislative remedies look promising at this time.
The Leagues says that its study into CC&R's will continue in accordance with the directives of the 1995 Annual Board of Directors Meeting. In the meantime, the ARRL says that it is important to educate all radio amateurs on covenant issues so that they will not unknowingly enter into agreements under which their operating may be restricted.
The League's General Counsel and staff have been instructed to develop a guidebook dealing with restrictive covenant issues as they relate to Amateur Radio.

(*****
NEW CORDLESS PHONE FREQUENCIES

The Federal Communications Commission has voted to provide more frequencies for cordless telephones to deal with congestion on crowded channels. Fifteen new channels are being created. This to more than double the number of frequencies currently available for cordless phones.
The new channels are located in the 46 and 49 MHz bands adjacent to the channels now being used. This permits continued use of existing cordless telephone technology. This means that the new cordless phones will be able to make use of both the old and new channels.

(*****
US GRANT TO UKRAINIAN HAMS

From overseas, word that Ukrainian hams are the beneficiaries of a $24,987 dollar grant from the U.S. Agency for International Development. The grant made through the Eurasia Foundation, was obtained made by a proposal made by the Foundation for Amateur International Radio Service, a nonprofit public foundation founded in May 1991. FAIRS has charter groups in Ukraine, Guyana, Bangladesh, and Russia. The grant proposal was written by Executive Director David Larsen, KK4WW, and European Director Victor Goncharsky, UA5WE.
The gift monies will be used to fund the procurement electronics hardware to extend APLINK coverage to Kiev from the Western Ukraine, with nodes also going to Hungary, the Czech Republic, and Poland. An Internet gateway also is planned, as well as an additional APLINK station and an FM repeater in western Ukraine.
Delivery of the equipment is expected by early summer, and will include hardware for seven digipeater nodes, including terminal node controllers, radios, and antennas. About 35 Ukrainian amateurs have packet capability in the current APLINK system.

(*****
IRTS NEWS SERVICE

A new on-the-air ham radio news service has taken to the airwaves in Ireland. The broadcasting of Irish Radio Transmitting Society News in the Gaelic language began about a month ago. The IRTS newscast airs Sunday afternoon at 2:00 pm on 3.975 MHz. The bulletin also features a call-in segment after the news. Anchor for these newscasts is EI6GS.

(*****
WRTC DELAY

The second World Radiosport Team Championship has been delayed. WRTC-95, planned for July 1995, has been rescheduled for July 1996. Organizers of the Washington, DC event said that WRTC-96 will be held the second weekend of July 1996, in conjunction with the IARU HF World Championship. The WRTC committee said that the major reason for the postponement was to give financial sponsors more time to publicize their participation well in advance of the event. The committee also has decided to change from 50 two-person teams to 30. The time frame for qualifying contest scores for applicants will be expanded from five to six years, to include results published from 1990 to 1995.

(*****
DX

In DX, reports have surfaced that Egyptian station SU3AM is very active in on 20 meters SSB. QSL via DL5ZBV.
Also, TJ1JB, as 5X1B has been operating CW around 14.027 MHz between 19:30 and 23:30 UTC. He is working for the American embassy in Cameroon. QSL via KE9A.

(*****
Mc GAN AWARD

The ARRL says that there is still time to nominate someone for the fourth annual Philip J. McGan Memorial Silver Antenna Award, for volunteer public relations activities on behalf of Amateur Radio. The award is sponsored jointly by the New Hampshire Amateur Radio Association and the ARRL. Deadline for nominations is May 31st. Call ARRL's Public Relations Department for an official nomination form at (203) 666-1541.

(*****
DAYTON '95

As this newscast goes to air, the Newsline production team is getting ready to hop a 767 jet for the city of Dayton, Ohio and Hamvention '95. Making the trek this year are producer Bill Pasternak, WA6ITF, legal affairs editor Joe Merdler, N6AHU and anchormen Burt Hicks, WB6MQV, and Jim Davis, KU8R.
If you plan on attending this years Hamvention, be advised that Newsline is again hosting the Media Forum on Saturday, April 29th at 3 pm in conference room number 2. Newsline will also be taking part in the Friday afternoon Educators Forum from 1 to 3 pm and in the Bulletin Services Forum on Sunday morning at 9:30 am. Joe Merdler, N6AHU, will be holding forth on the Hamvention Legal Forum hosted by attorney Jim O'Connell, W9WU.
Look for the Newsline staff at these forums as well as at the Worldradio and Bonneville Music booths on the convention floor. At Bonneville you can also get to meet Andrew-John and Lissa Huddleston who are the voices behind the songs on the new "Seek You" ham radio country and western CD. See you all at Hamvention '95!

I have a dim recollection of reading an article in one of the magazines about how to have a QSO with a non-English-speaking ham. I think that the article included a table of some common phrases and translations into other languages (maybe with phonetics). Can anyone point me to this article or something similar, particularly for Russian? Thanks.

How broadcasting goes through time? My electronic instructor said, "Time never changes." I don't believe they really know why it is, but it is a secret!

The Federal Building explosion... Some were warned and some were not. The FBI were not at home that day! Many others where not there! Time communications is such a secret that they did not want or could not convince others that such a thing was going to happen. To prevent it, they need to know how it happened and where the explosion took place.

Beside communicating through time, capitalists also can HEAR thoughts. Hear thoughts robbed through time!

If you ever do find out, you will get the answer that YOU have been told. But not too obviously. Old movies talk back and make comments of our day hearing thoughts of viewers. Groucho Marks does a lot of that. Photo phone they used to call it. RKO radio pictures, but you have been informed in any case.

2139. My List of Mail Order Electronics Companies

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-02 00:00:00 UTC
From: jfw@proteon.com
Message-ID: <D7yF6C.9py@proteon.com>
Source record: 247331
Cross-posted to: sci.electronics,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.info

It has been a while since I posted this, and some parts may be seriously
out of date. I hope to be able to find time to verify more of this list
soon and post any needed corrections. Note that updated copies are available
via WWW and FTP from my home system, funhouse.com.

[$Revision: 2.18 $; last updated May 2, 1995]
[Author: John Woods, WB7EEL, jfw@jfwhome.funhouse.com]

Here is my list of companies which will sell electronic components in
small quantities. Many of these places I have bought from, several
I haven't. Being a ham radio operator, I am most interested in
RF components, and in particular, air variable capacitors, which tend to be
scarce (and tend to be used or surplus even if I've otherwise labelled the
seller as "NEW").

Categories are:
NEW COMPONENTS Distributors and sellers of new components, or "new and some
used" in a couple of cases.
SURPLUS ELECTRONICS Usually overstocks, occasionally used equipment.
Ideal for stocking the junkbox, usually have dependable stock lines
of resistors, capacitors, and some semiconductors, but won't have
those LCD modules forever... An invaluable resource, don't shy away
from them.
SPECIALTY COMPONENTS In particular, crystals and toroidal cores.
KITS Ham radio kits, random electronic kits, whatever they have.
LITTLE GUYS Separated out because of some twisted sentimentality,
I suppose. Intended to honor one or two ham spare-bedroom
operations. Note that sending $1 along with catalog requests
is a big help for these folks.
PUBLICATIONS A small selection of publications dealing with electronics,
especially RF electronics.
QRP CLUB PUBLICATIONS Clubs for low-power amateur radio enthusiasts;
frequently have publications with quite a bit of technical content
(which is why I'm a member of QRP clubs headquartered thousands
of miles from where I live :-). Note, this is generally practical
technical content (how to build it) rather than theoretical technical
content (why it works), but definitely more than Contester's Quarterly.

Note on shipping costs: I don't always update these frequently enough, and
they're generally for continental US unless otherwise mentioned.

NEW COMPONENTS:

Digi-Key
701 Brooks Ave. South

P.O.Box 677
Thief River Falls, MN 56701-0677
+1-800-DIGI-KEY (344-4539)
+1-218-681-3380 (FAX)
No minimum, $5 handling under $25, free and very complete catalog, very nice indeed. Prices aren't always the best, but rarely excessive. Weak on RF specialty parts (though they now have the ever-popular NE602AN), but they do have blue LEDs.

Mouser Electronics Mouser Electronics Mouser Electronics
11433 Woodside Ave. 2401 Highway 287 North 12 Emery Ave.
Santee CA 92071 Mansfield TX 76063 Randolf NJ 07869
Mouser Electronics
370 Tomkins Court
Gilroy CA 95020
Catalog Subscriptions: (800) 992-9943 (Continental US only)
Sales & Service: (800) 34-MOUSER (800-346-6873) (US, Puerto R., Canada)
Very complete catalog of brand-new components (though no air variables). Usually quick service, $20 "minimum" ($5 charge under $20). When ordering, you may want to be sure to ask about availability and shipping locations; they have several warehouses, and frequently orders will get sent from several warehouses (which drives up the shipping costs). Export orders have a $100 minimum, except for Canada and Mexico.

Ocean State Electronics
P.O. Box 1458
Westerly RI 02891
+1-800-866-6626 (orders)
+1-401-596-3080
+1-401-596-3590 (FAX)
Minimum $5, S&H $4, $2 for catalog. Wide array of RF parts, especially air variables and B&W coils. Reportedly getting a bit slow filling orders.

Radiokit (store is located at:)
P.O.Box 973 169 Jeremy Hill Rd.
Pelham NH 03076 Pelham NH 03076
+1-603-635-2235
+1-603-635-2943 (FAX)
No minimum ($3 service charge if under $20), many kits, lots of J. W. Miller chokes & coils, B&W coils, RF switches, Millen variable capacitors, lots of parts in general. As of 24-Feb-94, they are again STILL out of catalogs, and just barely might have one by Dayton this year. They do accept mail orders, but you'll have to call for prices and availability. A classified ad in 3/94 QST says "Call/SASE", I guess they may have fliers.

Circuit Specialists Inc
P. O. Box 3047
Scottsdale AZ 85271-3047
+1-800-528-1417
No minimum with check or money order, $15 otherwise. $3 S&H.
New electronics, good RF assortment, increasing infestation of computers.

Active Electronics
11 Cummings Park 237 Hymus Blvd
Woburn MA 01801 Pointe Claire, Quebec, H9R 5C7
+1-800-677-8899 (Main number for US and Canada)
+1-514-630-7410 (International)
+1-514-697-8112 (FAX)
$25 minimum, $5 S&H UPS, catalog has a "$10 Suggested retail price" but they sent mine for free. They have 7(?) stores in the US (Chicago IL; Baltimore MD; Woburn MA; Detroit MI; Mt. Laurel NJ; Long Island NY; Seattle WA) and 10 stores in Canada (Quebec City; Montreal (2); Ottawa; Mississuaga; Winnipeg; Calgary; Toronto; Edmonton; Vancouver BC). Each store has its own 800 number and FAX number, call the main number(s). International orders are to be mailed to the Canadian address, but they want payment in US funds! Lots of stuff, oriented more toward supplying last-minute requirements of companies than hobbyists, but perfectly happy to take your money in small doses (stores have no minimum order). The $25 minimum for certain items is no longer explicit, but they note that some items will "ship in factory minimum package quantities", which might be worse.

Maplin Electronics Ltd.,
P.O. Box 3,
Rayleigh,
Essex,
SS6 8LR
U.K.
Phone numbers: your international code +44 702 554161 for sales
+44 702 553935 Fax
+44 702 556001 Tech enquiries(2-4pmGMT)
"Over here [in the United Kingdom] the main hobbyist electronics supplier is Maplin Electronics who stock a wide variety of equipment. They have a catalogue which can be shipped for 10.65 pounds sterling by air or 5.50 pounds sterling by surface mail. They accept Mastercard, American Express and International Reply Coupons. They have at least one type of air-filled variable capacitor!" (Thanks to Kev White at Cambridge University).

Newark Electronics
Send catalog requests to:
Newark Electronics
ATTENTION CATALOG DEPARTMENT
4801 N. Ravenswood Ave.
Chicago IL 60640-4496
+1-312-784-5100
They don't have a single mail address or phone; instead, one is supposed to call the closest of three pages worth of branch offices. I don't feel like typing in the entire list (it's copyrighted, anyway :-), so send email for your "local" distributor, or call their administrative offices at the number above. They have a $25 minimum order; they are a Real Distributor, but accept small orders (over the minimum, of course). Their catalog currently 1488 pages; they are very complete (except, of course, for my favorite scarce item, the air-variable capacitor). Note that the catalog prices tend not to match reality all that often, so order by phone rather than by mail; prices tend to be higher than other places, but they have a lot

of things that are hard to find from other outlets. Also note that they have six Canadian offices, and one UK office, and will take international orders at 500 N. Pulaski St., Chicago IL 60624-1019, +1-312-784-5100 (FAX +1-312-638-7652, TLX 6718690 NEWARK U).

Arrow Electronics, Inc. Catalog requests to:
Catalog Division Catalog Division
1860 Smithtown Ave. 25 Hub Drive
Ronkonkoma NY 11779 Melville NY 11747-9828
+1-800-93-ARROW
Minimum $25; they no longer have a catalog. They are a Real Distributor, but also didn't mind my placing a personal order (a couple of years ago).

MCM Electronics
650 Congress Park Drive
Centerville OH 45459-4072
+1-800-543-4330
+1-800-824-TECH (product questions)
+1-513-434-6959 (FAX)
Minimum $20 ($25 for charge cards, and they don't take personal checks), handling $1.95 + shipping. Oriented toward repair technicians, really heavy on VCR parts and somewhat overpriced doodads, lots of useful stuff not easily found elsewhere.

Fordham Radio Supply
260 Motor Parkway
Hauppauge NY 11788-5134
+1-800-695-4848
Tools for technicians. One or two items are not outrageously overpriced.

Jameco
1355 Shoreway Road
Belmost CA 94002
+1-800-831-4242
+1-800-237-6948 (FAX)
+1-415-592-8097
No longer have a minimum order, reasonable selection of parts again (in addition to computer components).

+1-215-788-5583
+1-215-788-9577 (FAX)
Minimum order $25 ($5 processing charge under $25), shipping $4.75 under $30;
Most items are new overstocks, much regularly stocked stuff as well. Tools, electrical supplies, motors, mechanical components, robotic components.

John Birkitt
1, The Strait, Lincoln
+44 522 520767
Lots of stuff for the practical enthusiast. Many bargains to be had if you've the patience to sort through the extensive heaps of assorted electronic miscellany. Good stocks of new components, tools and books,

masses of RF gear and very competetive prices.
Two shops side by side cater for the "consumer" type goods and the
"electronics" type. Does mail order, takes visa/access etc. Mail order
list contains lots of unusual goodies that you'll possibly never see on
offer anywhere else. (thanks to Dave Walster @ lincoln.gpsemi.com)

N R Bardwell
Abbeydale Road, Sheffield
+44 742 552886
Possibly the busiest electronics emporium I've ever visited. Specialises in
radio gear and alarm equipment but many of the obligatory bags of "unmarked,
untested" goodies makes Bardwell's *the* place to go. Friendly, efficient
and knowledgeable staff. Cheap. Very cheap. Thriving mail order business
with some good bargains in IC's and discrete's. Write/phone for a price
list. (thanks to Dave Walster @ lincoln.gpsemi.com)

fax: +1-216-441-8503
$10 minimum. Surplus electronics.
"Also known to stock many components, but this is not discussed in the catalog. Local store, a cleveland institution, is called Electronic Surplus, Inc., and has been there since '48. Third generation now runs it." -- wb8foz
7/13/94: Dave Lesher (wb8foz) updates their hours as M,W,F 0900-1900; T,R 0900-1600; S 0900-1500; but wasn't sure if that was the store hours or the order line hours (but likely both).

Surplus Sales of Nebraska
1502 Jones Street
Omaha, Nebraska 68102
+1-402-346-4750
+1-402-346-2939 (FAX)
New and surplus radio electronics. Wide selection: air variables.
Catalog $3 (free with order, refundable with $25 catalog purchase).

Tucker Surplus Store
1717 Reserve St.
Garland TX 75042
+1-800-527-4642 extension 135
Surplus electronic gear; oscilloscopes and signal generators from the days
when dinosaurs with vacuum tubes roamed the earth (some solid state gear, but
all well used). Prices seem relatively high, and you'll be shocked to learn
how much it costs to ship a 75 pound oscilloscope by motor freight...
[Steve Brown, N8HFI:
In defense of Tucker, the have a broad selection, repair facilities, and
they certify the used equipment to meet the original specification and
warranty it for 90 days. Not every source does this:]

Davilyn Corp.
13406 Saticoy St.
North Hollywood, CA 91605-3475
+1-800-235-6222 (Ex. CA)
+1-818-787-3334 (CA)
+1-818-787-4732 (FAX)
Surplus electronic gear.
[has much better prices [than Tucker], but sells used equipment as-is. -N8HFI]

SPECIALTY COMPONENTS:

JAN Crystals
2341 Crystal Drive
P.O. Box 06017
Fort Myers FL 33906-6017
+1-800-JAN-XTAL (Monday through Thursday)
+1-813-936-3750 (FAX)
+1-813-936-2397 (plant)
They make crystals. Minimum order is $10, which might be one crystal, or
might be two.

Crystek Corporation
2351/2371 Crystal Drive
P.O. Box 06135
Fort Myers FL 33906-6135
+1-800-237-3061 (M-F) (US and Canada but not Alaska and Hawaii)
+1-813-936-2109
+1-813-939-4226 (FAX)
They make crystals too. They were the cheapest last time I ordered, but
I don't have an up-to-date price list. It took about 4 weeks, and they
had said it would take 6.

ICM (International Crystal Manufacturing Co., Inc.)
701 W. Sheridan
PO Box 26330
Oklahoma City OK 73126-0330
+1-800-426-9825
More crystals. They were more expensive, but they have lots of pre-made crystals for various rigs, so they would probably be faster.

Amidon Associates
3122 Alpine Way
Santa Ana, Calif. 92074
+1-714-850-4660
Toroid cores and related things. Very fast service. Now takes MC/Visa and phone orders. I *think* this is their current address, they seem to move a lot.

+1-615-453-7172 (Information)
+1-615-428-4483 (FAX)
+1-800-833-7373 (Credit card orders only)
TenTec, well known manufacturer of amateur and commercial radios, is now selling kits, and apparently have been astonished by the demand. Help astonish them, call them up and get a catalog :-). The only components they sell are TenTec cases (naturally enough) and a kit for, believe it or not, a high-power variable capacitor (40-500pF, 3.5KV).

{See also RadioKit)

LITTLE GUYS:

Dan's Small Parts And Kits (Formerly KA7QJY Components)
<He's moved again, and
has suspended the business
for a while. Let's hope
he picks it up again soon.>
Send a business-size SASE (2 stamps) for a current list of parts. RF parts, including vernier drives and air variables; now also offers kits.

$3.75 shipping, no minimum. Fast service, lots of satisfied customers.

Kanga US
Bill Kelsey
3521 Spring Lake Dr.
Findlay, OH 45840
+1-419-423-5643
call between 7 - 11 pm eastern time please. stamp for a catalog.
"I import kits from Kanga in the UK - most of them come from
SPRAT - the journal of the G-QRP Club. I also have the Super Tee Antenna
Tuner, and a range of kits from Elktronics that are based on the DDS
articles in 73 Magazine."

R&R Associates
3106 Glendon Avenue
Los Angeles, CA 90034
+1-213-474-1315 (res)
[Richard Rathburn, KB6NQ] "I mainly sell pc boards from QST, Radio
Electronics, etc., and a few of in-house design. I also sell IC's, etc."
Send a SASE every now and then for his most recent flyer. He also has boards
for some Motorola Application Notes. (Jan 94 -- a member of the QRP mailing
list reports some dissatisfaction with R&R.)

CW Technology
7328 Timbercreek Court
Reynoldsburg, OH 43068-1181
COD Orders at 800-547-7479
"I have a small (just me) mail order company through which I sell kits.
My starter products were kits for computer<->transceiver interfaces to go
along with my 2/93 QST article. Since, I have added a programmer kit for
the MC68HC705K1 microcontroller and an optoisolated stepper motor controller
kit. I also sell the PCBs and difficult parts for these projects."
- Wally Blackburn AA8DX

GNP Sales
POB 77011
San Francisco, CA 94107.
"Business size SASE for our current list.
We are very small, all three of us have "real" jobs. We buy and sell
vacuum caps, vacuum relays, various high voltage parts, coax relays,
mostly radio stuff." - Peter Gerba, pgerba@crl.com

This is the club that has had a succession of incredibly popular kits, ranging from the Norcal 40 (and now its successor, the 40a), the Sierra, and soon a QRP SSB kit.

North Texas QRP Club -- GONE (as a publication, anyway)
Chuck Adams had to give up publishing his newsletter after two fine issues.

NOTES:

This file, and many others, are available for anonymous ftp from
ftp.cs.buffalo.edu, in /pub/ham-radio (this article is "mail_order"
in that directory). It is also available from my WWW server at
<URL:http://www.funhouse.com/jfw/RF_PARTS.txt>, and via ftp at
<URL:ftp://ftp.funhouse.com/pub/RF_PARTS.txt>. The WWW copy is
the one I edit, the ftp copy gets updated sporadically.

CHANGES FOR $Revision: 2.18 $

Ocean State is still in business, despite recent rumors!
Add Hambrew, delete North Texas QRP Club.
Townsend Electronics gave up.
Amidon moved.
Dan's Small Parts is suspended after a move.

2140. Electronics museums

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-02 00:00:00 UTC
From: faunt@netcom17.netcom.com
Message-ID: <FAUNT.95May2070910@netcom17.netcom.com>
Source record: 247332

I have seen very recently information on an electronics museum next door to the BWI Marrriot, in Maryland, although I can't locate that information now. Since I have a RON scheduled for there in a couple of months, could someone give me more information about this museum, or reference the place weher I've seen this information?

Information on other electronics museums is also of interest.
Thanks, and 73,
doug

Gary Davis (gdavis@griffin.emba.uvm.edu) wrote:

: Hasn't the CW argument really gone a bit silly?
: First cw gives a better readability under weak or marginal conditions.
: There is no known mode including ssb or packet that can routinely
: outpace cw when the conditions are poor.

M-ary FSK with coding can outpreform CW in a harsh noise environment.
CW is a OOK system with little coding (morse has some coding properties, but
they are not good). OOK can approach the same Prob of bit error as non
coherent Binary FSK. By going to a cohehrent M-ary FSK, the required
signal to noise ratio is reduced. See Sklar for more details.

: CW is an elegantly simple mode. One can communicate with the least
: expensive and unsophisticated of equipment.

Yes, but with FSK on a chip, it's becoming real simple.

: IF you want to get on HF do the time. Learn the code. Stop belly-aching.

I don't want HF privs. Let's face it, theres only 7MHz od bandwidth
down there. I just don't like people making CW sound better then it really
is.

(Clark Savage Turner) writes:

>DSP at IF frequencies is still not practical for practical uses, the
>processor would have to run much faster than current ones do to accomplish
>it. Perhaps an engineer could explain further, but that is the story
>as I know it.

Kenwood TS850 or TS450 (introduced in 1990) with DSP100 option or
TS950sdx have DSP in the IF stage:
* the dsp100 option performs an additional conversion to ~38kc
* dsp is used for modulation/demodulation and very limited filtering

The ICOM 775DSP adds low level audio dsp filtering etc to above.

In a similar vein, other that features that ICOM is touting as innovative
that have appeared in other rigs:
* Single crystal DDS with 1hz tuning - Kenwood TS850/950 have had for
5 yrs now.
* Dual Band Pass Tuning: Knwd 850/950
* Audio PF: Yaesu 1000
* Auto notch etc - Ten-Tec OMNI VI
* FET output 200W - Yaesu 1000D, 150W with Knwd 950sdx
* Band Stacking registers: Kenwood TS850/950 and later in Ten-Tec OMNI VI
* CW-R - reverse sideband for CW reception - Kenwood TS450/850/950 since 1990.

In ICOM's favor: excellent user interface. I fiddled with the radio at
Dayton and found the interface to be quite nice.

Source record: 247340

The DSP action in the 775DSP takes place in the AF stages, not the IF's. It would have been nice if they could have done it at a higher level before the noise has a chance to influence the activity of the AGC chain.

BB>
BB>>And WHICH regulation do you speak of Scott?
BB>
BB>How about..
BB>97.113 Prohibited transmissions. -(a) No amateur
BB>station shall
BB>(5)
BB>(b) An amateur station shall not engage in any form of
BB>broadcasting; nor may an amateur station transmit one-
BB>way communications except as specifically provided in
BB>these rules;.....
BB>
BB>Bill - K5MIL
BB>

In the context of Part 97, "broadcasting" means transmissions
intended for reception by the general public.

Part 97 does allow several types of one-way transmissions, including
Morse practice, beacons, information bulletins intended for amateurs,
retransmission of NASA manned-spacecraft communications.

> a fluorescent light or a dimmer.
>

Most of the problems comming from fluorescent lights are from the common self-starting type fixtures currently available. They keep the tube going until it actually dies, where the older "starter" types will tell you the bulb is weak by taking a lot longer to start, if it starts at all. The light will also "blink" when they get old. By keeping the bulb going, the ballast is allowing more current to be drawn by the bulb. This in turn overheats the ballast. In the old days when ballasts were made with PVC's as the insulator/coolant, the ballast could take it, not any more. The choke plates begin to warp, (due to the extra heat disolving the lamination), and produce the buzzing.

The best thing to do is keep watching the bulb. It usually will darken on one end, when you can see that it is very dark when it is off, it's time to get ready to replace it. If you begin to notice some flickering when it is on, the tube is ready to go, change it. Also "listen" to the lamp fixture. You don't have to put you ear next to it, just pay attention for a slight buzzing sound when it's quiet. That means the damage has been done and the ballast should be replaced. If the ballast is damaged, the buzz may be present with a new bulb in place, but it usually goes away until the new bulb starts to get old.

Dimmers, on the other hand, are the worst desaster to ever happen to radio. The triacs in them will radiate broadband noise for blocks around and use the house wiring to radiate the signals they generate. This is especially true if your wiring is not in grounded conduits. Many new houses and additions use the heavy rubber 14/2-w/ground cable instead of grounded BX or conduit.

If you have a cheaper, plastic, type, (400-600Watt max rating), you got in the electrical department of a discount store, dump it and get a high power

unit from a real electrical/lighting store. These are made of metal and ground to the outlet box, the front cover is usually the heat sink and it should have a 1000 Watt or greater rating. Never run any dimmer close to it's rating, it will generate radio buzz. Some of the more expensive types may actually use multi-vibrators that operate at the particular frequencies designated for industial grade electrical equipment and must comply with FCC regulations. You will get radio noise, at or around these frequencies, but broadband noise should be gone, (unless your neighbor has a cheap dimmer).

Another big problem is the power distribution transformer, usually on the utility pole, but also underground/well installations can cause problems. Just like the ballast, they can overheat and the coolant can vaporize and leak out the gasket or the pressure can cause seapage at the seal bolt, (similar to your car's crankcase). Rust and corrosion can also cause a hole around a gasket.

When the coolant level drops, then just like the ballast, the transformaer buzzes. The hi-tention lines, themselves a noise source, cause the noise to radiate for, sometimes, thousands of feet. This noise is brutal. If you can trace the noise to one of them, especially if it is present during low usage periods, call the power company immediately. These things have been known to explode and some of them in use are old and still have PVC's in them.

Anybody know of a place (ftp, WWW) that has an assortment of ham radio
related pictures? (jpg, gif, bmp) You know, radios and antennas and stuff.

Thanks!

73,
Russ KI7FL

>in 1988. Have you seen the Icom 706 yet?
>

I saw it at Dayton. Looks just like the ad. The rep said it would be shipping to US in August, "street" price about $1.3K (but maybe higher, possibly due to 10% across-board price increase of ICOM products on 5/1/95).

The antenna tuner is the same size box as the 706 itself (external tuner, rather than built-in like the FT900/AT).

Hello.
I have these fine receivers for sale:
1.Realistic PRO-57
2.Uniden Bearcat Sportcat SC150B
2.Realistic PRO-43

1. Realistic PRO-57
base/mobile, full backlit frequency display, full direct entry ke
ypad, 30-512mHz coverage, same as current PRO-508 or last years
PRO-58, nice condition, just $75 FIRM.
2. Uniden Bearcat Sportcat SC150B handhels scanner
100 channels, 800mHz, 29-956mHz, nicads, charger, manual, antenna,
very fast scanner, full backlit frequency display, full direct en
try keypad, very nice. Paid $200 2 months ago, am selling for jus
t $150 FIRM.
3. Realistic PRO-43
200 channels, full 800mHz with cell, in box with manual and anten
na, very very nice, paid $349, own the king for just $225 FIRM.

Please send mail if you would like to buy any or all of these fin
e monitor receivers.
All prices are firm, and buyer pays shipping, no exceptions.

Thanks.

Bummer. On a related topic, ARRL, what ever possessed you to completely ELIMINATE the entire topic of gunn diodes, gunn effect, gunnplexers, and everything to do with wideband microwave techniques, equipment, construction and theory?? The 1995 Handbook hasnt even the slightest trace of this stuff.. WHY??

Meanwhile, the 1995 Handbook IS filled with a multitude of 75m/40m QRP stuff ..just what everyone needs right? <insert polite golf-match applause> WRONG!

Methinks W1CF would wince greatly at this horrible decision!

Please ARRL, get a clue!

Source record: 247351

Jim,
You are correct that Buckmaster did change their format. They are professional enough to let software developers know that the change was coming (at least they let this developer know), and will be making the new data format available. I would have preferred that I got a "pre-release", but at least they were up front and let me know in advance about the change. That is more than I can say for QRZ. They changed their format in summer of '94, and they were not too nice about telling anyone about their changes. They did announce the changes, but would not identify what they were. Luckily, the publisher, Walnut Creek helped out, but if QRZ continues to think the world revolves around them, this software developer will be dropping support of their product.
SAM on the other hand, has made changes continually to their database, but insulated customers and software developers by using a well defined API. A class act in my opinion! They were able to improve their product without crippling users who have attached their database to logging software. Supposedly Buckmaster is going to this API approach also - now if only the others would wake up and use this approach.

73,
Alan Yorinks

Those who use CDs are in the long run cutting their own throat!

In the early days of home computers, you had to load individual programs via a cassette tape or evern paper tape.
Finally disk drives became popular, but you still had to change disks for each program and program interaction was at best, a laborsome task.

With the advent of the affordable hard-drive, one could have numerous programs, all interactive, at a keypress.

Why on earth, would one want to revert back to the old days of constant disk swapping and non-interactive programs is beside me.

Just because a CD holds more data than Fort Knox, doesn't make it a viable alternative to a larger hard-drive.

In fact, many old hackers will remember the locked disks, using spiralling and other techniques to keep them from being copied. Most of the CDs I have seen, baring a few, required that the CD be in the drive the entire time you were using it. You could not copy most of the programs to yor Hard-Drive because the program accessed a certain place on the CD.

CDs are nothing more than antoher disk locking scheme and many are falling far it. Most CDs are not reverse compatable, so when you upgrade your system, your CDs can hit the trash.

As far as copyright protection, I personally would not buy any program that I have not thoroughly tested, or given a return policy on.
Yes I have used much pirated software, but, unlike the manufacturers claim, it was to their benefit. If I liked the program, I purchased a legal copy, along with all the books and product support that comes with same.
If I didn't like a program, it was erased from my drive and the copy was tossed in the trash, where it belonged...And I was not out the money for trying it...

I got sick and tired of paying for shitty programs that don't work properly. And companies that know that their products have serious bugs but don't fix them. I'm not afraid to name companies either, like Intuit, who don't give a damn that their products have serious buugs. And they don't even know how to fix them. Otherwise, subsequent issues would have them removed.....
My hats off to AutoDesk, they not only listen, they make the fix and send you a FREE update. Good going guys....

Gary

2165. Re: MORSE on the INTERNET

Actually, I was thinking of writing a pseudo-RFC-style document describing how to encapsulate Morse Code over ISDN!

Lessee, there's the Blind Sampling Circuit-mode method, the Blind-sampled-timed-frame method, the Encoded-character-block method...

Blind sampled methods just reflect the up-down state of the fist every 50 ms. or so. Encoded-character methods send the actual ASCII-based representations, along with encoding information like Farnsworth timings.

All this to fit Morse onto a 64000 bps clear digital channel.

Yes it's a joke but it's the sort of joke some hams would take too seriously today!

Due in part to all this publicity I have been lurking on
the low bands more than usual. I regret to say that this
little tiff between Maine and Georgia (here in after referred
to as Civil War II or CWII) is not a patch on what else goes
on on 75 meters. Except for the fact that the fallout from this
may have a negative effect on a lot of uninvolved hams the 3975
fight would be comic.

During my recent education I have heard one K5BLB on 3953 as I
have found out he is referred to as "Sid the Lid" his vitriolic
spasms of hate have to be experienced to be believed. His call
book address is bogus (surprise) but with a small effort I found him.

The entire experience has saved me money though. I was going to
build a 75/80 meter antenna system, not a chance now more for
the satellite stuff. My experience with the veteran hams in the
Albuquerque NM area gave me a high expectation for the hobby.

Between this stupid turf battle and the Sid the Lid types my
perception has dropped a great deal.

To the Georgia gang and W5YI your fight isn't with all of the ham
community why drag us into it. The damage you may do far out weighs
any inconvience on a particular frequency.

To K1MAN and his supporters you are not the ARRL or RACES or ARES
and I don't expect you ever will be. Loose the ego and get a life.

|Right on David. I find that VERY annoying on QST too.

|I DELIBERATELY turn the page as soon as I see that "Price: CALL"
|nonsense!

|I will not do business with any dealer who pulls that stupid stunt!

Never mind the fact that the publishing deadline is so far out that
it is impossible for dealers to know what their costs are likely to
be, especially considering the possiblity (currently being realized)
of a rapid change in the yen/dollar relationship.

They often have prices on items that are made in America or are
relatively inexpensive (thus putting the dealer less at risk).

Or do what I do: $CALL$, it's usually free.

I agree: CW *is* here to stay, at least in the amateur MF/HF bands, where it's the only type of emission allowed. All forms of emission legal for Amateur Radio use between 1.8 and 29.7 MHz are continuous-wave (CW) emissions; we US hams finally lost damped [discontinuous] waves once and forever with the rules that came out of the Washington Conference of 1927. Nowadays, the international radio regs forbid the use of damped waves (termed *Class B* emissions] for any purpose on any frequency. Viva CW!

: about $6.00.

The _Repeater Directory_ is certainly a valuable resource, especially when mobile or in an unfamiliar area. IMHO, however, ARRL would do the hobby a great service if they would make it available through an ftp site, a la the FCC database. The info could be updated as changes take place, instead of relying on data is now nearly a year old. This would also facilitate sorting the data in different ways offline, for easier cross-reference.

The other way that this directory could be improved, is by stating the geographic location of the repeater, instead of saying "covers area." In an area like San Bernardino County, which covers more than 20,000 square miles and borders on two states, "covers area" just isn't true.

This could be considered serious if it wasn't so typical of the media.
I am reminded of a quote from a veteran small airport operator who
has been descended on by the flies of media every time an aviation incident
happened anywhere near his airport.
"A reporter is someone who is going to tell you what you saw", he once said
to me.
Ask them about 'due diligence'.

Despite reports of the demise of Morse Code, I'm pleased to report that I had the opportunity today to ask the Commander in Chief of the U.S. Special Operations Command about the status of Morse Code communications by U.S. Special Operations Forces. I was surprised and pleased to hear that Morse Code is still taught to all Special Operations communicators, cross-trained to non-communicators for use during emergencies, and used daily in Special Operations Forces exercises and operations.

It was a pleasure to speak to officers and NCOs of this accomplished and highly capable military force, and to view the display of modern HF and other communications equipment used in their operations, including a proudly displayed (and worn!) Morse key.

Ya. And if you simply want to go out and "stay in touch" you have
to listen to people trying to learn Windoze, people talking about their
corns or liver disease, their new farming tools and dozens of other things
you don't want to hear just in case someone calls you. DSQ/DPL helps but
not all rigs have this and not all repeater controllers allow DTMF
passthrough. Also, repeaters that usually sit quiet always seem to be
tied up with people who key for 2 minutes at a time right when I need to
make that important contact. None of these things happen with cellular.
I get cellular for $29.95/month including free evenings, weekends, and the
phone itself.

I am a ham and always will be, but ham for personal communication
is going the way of the doh-doh. For ragchewing, free DX, or broadcast style
communications (ie. security, parades, car rallies, weather watch) it's
still very useful. For keeping in touch, it's usually a royal pain.

: Ha!

To all radio amateurs

SB QST ARL ARLB047
ARLB047 HF auto digital detailed

The FCC has released its Report and Order in PR Docket 94-59, concerning HF digital communications in the Amateur Radio Service. The new rules, effective July 1, 1995, permit automatically controlled HF RTTY and data stations to communicate with one another in the following segments: 28.120 to 28.189, 24.925 to 24.930, 21.090 to 21.100, 18.105 to 18.110, 14.095 to 14.0995, 14.1005 to 14.112, 10.140 to 10.150, 7.100 to 7.105, and 3.620 to 3.635 MHz.

The new rules also permit manually controlled stations to initiate communication with automatically controlled HF RTTY and data stations. In this case the automatically controlled station may use any frequency authorized for such emissions, but may occupy a bandwidth of no more than 500 Hz.

Automatic control must cease upon notification by an FCC engineer in charge that the station is transmitting improperly or causing interference to other stations.

The FCC said it recognized the concerns of those who opposed the proposal on grounds that such operation could interfere with other amateurs, but that it believed the provisions adopted would be adequate to minimize such interference.

More information is on page 71, August 1994 QST.

2181. RF emissions and rocket igniters

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-02 00:00:00 UTC
From: don@irving.org
Message-ID: <don.79.0013B360@irving.org>
Source record: 247373

PROPOSAL TO TEST THE EFFECTS OF RADIO EMISSIONS IN THE VICINITY OF ROCKET IGNITERS

I'm a ham who loves radios and a rocketry enthusiast who loves model and high-power rocket launches. What could be more fun than participating at a rocket launch and talking on my radios all the while. Unfortunately, There is concern over whether RF immediately adjacent to a prepped rocket motor might pose a danger. Rockets motors are commonly ignited by electrical "matches" that burn when current passes through them. Some are high-current devices, but many require less than one amp of current to ignite.

I have decided to perform tests with the Aero-Pac rocketry group (http://www.aeropac.org) using common igniters to see if there is any cause for concern, and to help develop safety standards if there is any danger. I want to do this within the next few weeks so I can have the results in advance of a big launch coming up in June.

I have some general ideas about what tests to perform, but I would like other hams to comment about whether they think I am approaching this properly. Here is a summary of my present ideas.

EXPERIMENT 1: Establish distances at which RF emissions at given effective radiated powers are intrinsically safe for the igniters being tested. (Perhaps we will not be able to ignite them at _any_ distance, which would be the best outcome.)

By "intrinsically safe" I mean that we are unable to achieve ignition even when the degree of RF coupling between transmitter and igniter is a value substantially greater than the realistic best-case coupling you would expect in a prepped rocket.

I am thinking of performing tests with a tuned dipole at the transmitter and a similar tuned dipole attached to the igniter. The RF coupling between two dipoles would, I think, be far greater than the best-case RF coupling expected between a transmitter and an igniter in a prepped rocket motor. For this reason, any distance at which we are not able to achieve ignition with tuned dipoles could be considered intrinsically safe for that effective radiated power regardless of how the igniter leads might be configured in actual use.

The experimental method in summary: For each frequency and power level, transmit carrier for a defined period (perhaps 30 seconds). Start with larger antenna separations (to conserve igniters), and move closer with each test until ignition is achieved. If ignition is achieved at a certain distance, then move outward one step, and perform extended

testing at this distance. The extended testing would include several samples of igniters, re-checking of apparatus, and whatever other measures we may adopt to ensure a statistically valid test. All transmission tests would include readings of transmit/reflected power at the transmitter and voltage/current measurements at the igniter. I would perform this experiment in various frequency bands using tuned antennas for each frequency tested.

Here are some RF coupling considerations. The DC resistance of most igniters is about one or two ohms. I don't know what the impedance would be at RF frequencies. Do you think my choice of a dipole at the igniter end is a good choice for providing coupling that is greater-than-best-case coupling for normal use? Or would impedance considerations make some other configuration a more appropriate test?

EXPERIMENT 2: Determine the igniter lead configurations that provide the highest resistance to RF coupling at various frequencies.

The safest configuration for igniter leads is the one which provides the greatest protection from inadvertent battery ignition _and_ the greatest protection from RF coupling. Igniter leads might be parallel, twisted, or separated, and the leads may be stored with their leads either shorted at the end or not shorted. This experiment will provide knowledge about how RF coupling varies with different igniter configurations. This experiment would be performed at various radio frequencies.

The experimental method in summary: Select a power level and distance that is expected not to cause ignition. For each frequency, transmit carrier. Measure RF voltage across the igniter for various configurations of leads and other variables we decide to test on. If a certain configuration produces less voltage across the igniter, then it is the safest one.

Does this testing make sense? Or am I missing anything. I am concerned about how to measure voltage or current at RF. My Fluke meter should do okay at RF, but the leads will affect things. I would be happy to receive recommendations from anyone about this.

It is very important that the results be valid because rocket launch standards (or absence of them) will be based on the outcome. I would genuinely appreciate any feedback anyone may be able to provide about these things, and I would welcome assistance in any form.

Thanks in advance,
Don Irving N6DRB (don@irving.org)

And a most excellent battery it is... Expensive, but gives a true 2.5 AH at
hi-drain applications like ham radios (by contrast Alkaline are only .9 AH).
They also have a shelf life of 10 years! A great addition to emergency packs.
I put 6 in a standard HT AA pack and it lasted a long time!

Hi:

I bought the brick Power Supply from Radio Shack to plug into the
HTX-202. I'm suspecting that the plug that I'm using (not the one that
says in the manual) does not fit the connector on top of the radio because
I'm getting an Er2 from time to time while I plug the radio to "the brick".
Could anyone confirm or deny my suspicions???

Remember the Special Event Stations at the various NASA centers that marked the 25th Anniversary of the Apollo 11 mission last summer?

Has anybody received their certificate for working these stations? I'm specifically interested in the station at the Kennedy Space Center, which I worked and sent in my QSL and SASE. I had hoped to get the certificate, since I was at KSC at the time of the launch, way back when, and thought the certificate would be a nice touch in the shack.

I remember a thread about this a few months ago, which resulted in a posting that "they're about to mail them out," or something to that effect. Did anyone ever get one?

Or should I just kiss this one off?

Sorry Dave, but low_profile still makes me think of small, short radios.
Not low impact operating. There is also the '/', I'm not certain it's
allowed in group names, at least I couldn't find any current use of it.
I still think that qrp or qrp_something_else would work better. Let's see

rec.radio.amateur.qrp I think this has been voted down
before, but I don't understand why
.low_profile I don't think it tells the 'story'
.qrp_low_profile As above
.qrp_hidden Just thought of this one
don't know how good it would
really be, but it could cover
qrp, fox-hunts and 'low_profile'

Interesting!
By this account I know several "extras" that happen to hold Advanced
or General class licenses.
And though I don't know any personally, I suspect that there are many
Extra
class amateurs who don't meet your ideal.

2187. The Second AARL Convention - Part 1

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-02 00:00:00 UTC
From: billhar@spaceworks.com
Message-ID: <D7yLwt.4y@spaceworks.com>
Source record: 247379

Radio News for December, 1923 ran an article on the Second ARRL
National Convention which was held in September of that year.
Below is a summary of the article written by L. W. Harty, 5XV
posted in two parts. Hope you find in entertaining.

Bill - K5MIL

The Second ARRL National Convention
Radio News for December, 1923
Part 1 of 2

The First Day, September 11
September the eleventh was meant to be only registration day, but
when the hams started registering and seeing fellows for the first time,
whom they had talked with on the air, everyone had to meet everyone
else. Bedlam started when a few, who brought whistles, started whistling
code, and soon almost everyone was in the act with code flying right
and left. When it was discovered that noted French amateur 8AB was
among the gang there was a rush for his autograph. Words were powerless
to describe the pleasure of meeting these friends of the air in person
for the first time.

The Second Day,
Things really got started the next day, with the gang whistling amd
humming code. 8ZD and 3UN showed up with auto horns and batteries and
added to the QRM. That afternoon, athletic contest were announced.
Several short races were run, a three-legged race, a wheel-barrow race,
and a skipping race. There was a tug-of-war between the C.W. and Spark
gangs, with the C.W. folks winning. After the contest, everyone split
up to get ready for the banquet which was the big event for that night.

The Banquet
About 500 attended the banquet, and almost everyone had whistles and
was calling everyone else in code. (Ok folks, now I know. Now I know
why normal people think of hams as 'loonies','half nuts'. It all started
right there in Chicago. Can you imagine 500 people running around with
whistles, blowing code at one another? Why someone did not call the
folks at the 'funny farm' to come get these guys, I'll never know.
Next time at HamCom, when I see that guy running around with a
walkie-talkie on each hip and that hard-hat with the rubber ducky
antenna sticking out of the top, I'll think of the early Chicago ARRL
convention and know where it all began. - ed.) Entertainment was
provided by an orchestra made up of hams and songs suitable to the
occasion were sung (probably good old favorites like, 'Your The
Reason Our Children Are So Ugly, Little Darlin' - ed.). The only thing
that calmed things down a bit was the meal. Speakers of the evening

were famous candidate for Congress, Andy Gump, Supervisor of Radio, Mr. Edwards of the Eight District, and famed French amateur Mr. Deloy, 8AB. Deloy entered a special plea for clear sending of callsigns and a general improvement in sending fists. After hearing him, every ham with 5 watts or more was in hopes of working him in France. It was rumored that many were grooming their sets for the next trans-atlantic tests. The night finished with a few more orchestra selections and singing.

The Third Day
Everyone who survived the night before assembled at the Edgewater Beach Hotel for bus rides through Chicago and conducted tours of several broadcast stations. The gang with their whistles and code almost stopped traffic, they attracted so much attention. One of the stations toured was WDAP. The hams were duly impressed. WDAP has a variocoupler wound with 3/4 inch copper tubing. After the tours, they headed back to the Edgewater for a few prize contests. One contest was to eat 10 dry soda crackers and see who could be the first to whistle a note. Next was a radio liars' contest that was stunning in its audacity. K.E. Hassel won and then had the nerve to give a technical talk. That night at 7:30, technical talks were held at the Nicholas Senn High School. Mr Clausing, of the Chicago Radio Laboratory gave a discussion of transmitters and design. After Mr. Clausing, Mr. Vermilya, 1ZE, gave a description of his ether buster that melts the plating off his antenna with 25 amperes of RF. Prof. Jansky then spoke on BCL (BroadCast Listener - ed) interference. His data, proved the amateur to be the least cause of intereference (much applause). Then Deloy, French 8AB, gave some interesting data on the receiver he is using causing much rustling of paper as many notes were taken.

continued in part 2

The Second ARRL National Convention
Radio News for December, 1923
Part 2 of 2

The Fourth Day
The division managers and traffic managers held conference. Some of the gang took a tour of the excellent broadcast station at Elgin, while some stayed at the Edgewater to see some exhibition diving. Once again, at 7:30, everyone assembled at Nicholas Senn HS for more technical talks. One of the best talks was by Mr Miller of Jewell Electric Co. who had a mammoth testboard and special meters, which he used to describe the methods of measuring tube constants. Mr J.C. Warner of the G.E. Laboratories, spoke on the new series of transmitting tubes. He showed the new UV203-A, and UV204-A, 50 and 250 watt tubes. There was much groaning and excitement when he broke one of the 50 watters to show it's inside construction. Next K.E. Hassel of Chicago Radio Laboratory, gave a talk on receiver design, and Ross Gunn spoke on antenna design, then concluding Mr. Olsen, 9CSR, talked about the new Balkite Rectifier and how to use it.

The Fifth Day
The final day of the convention started off with an indoor baseball game between the sparks and C.W. gangs. This time the sparks had their revenge and beat the C.W.'s. The afternoon events started with a group photograph that as the author states, "almost wrecked a good camera. It was sturdily built though and stood the awful strain". Then came the Radio Stunt Party. Everyone got out pencil and paper and attempted to get the signature from one person in every district, Canada, and France. The first to complete the list was to be awarded a prize. The next event (and this must have been really exciting-ed.) was the Wild Acrobatic Headphone contest. Each contestant was given a pair of headphones with the cord carefully wound; the idea was to unwind them, put them on and have them straight before anyone else. This being done with one hand, the other being kept in the pocket. Next came the loop contest (transmitter hunt as we know today-ed.) WDAP loaned receivers and the loops were homemade. There were two hams to each receiver and everyone scattered to hunt for the hidden spark transmitter. (I know why there were two hams per receiver. These things were several times larger than your present day transceiver, heavy, and that isn't counting the A and B batteries necessary to run the thing. Can you imagine all these guys running down the sidewalks of Chicago carrying all this apparatus with a big wire loop on top? Musta been a real sight to see-ed.) The transmitter was finally found after a long and amusing search during which many never heard it. That night all assembled at the Sheridan-Plaza Hotel and were taken, in buses, to the mysterious location of the night's happen-

ings. Things got off to a start with the usual whistling of code, and the announcement of the dreaded initiation into the Royal Order of The Wouff Hong and the revealment of its awful mysteries was made. Since the crowd was so large, 5ZC was elected to represent the crowd and go through the initiation ceremony. It is secret of course so the facts cannot be told here. After the ceremony, everyone ate. Entertainment was, as the author states, " a good and shapely chorus that gave us some real eye and ear entertainment". The big excitement of the night came on the drawing for the Zenith complete set, donated by the Chicago Radio Laboratory. (only a bunch of hams would be more excited over a receiver than a line of pretty chorus girls - ed). Next the representative from Grebe donated one of their new receivers, a CR-13, and the Western Coil Company donated a four tube set for the drawings. So ended the second ARRL National Convention with everyone saying their 73's and and CUL's.

Notice there was no letter prefix before the district number in the callsigns. It was somewhere around 1929 when the letter prefix was added.

Hope you enjoyed it.
73, de K5MIL

2189. Standard C5718 mods wanted

2190. HELP: G3RUH & FT-212 for 9600

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-02 00:00:00 UTC
From: dj1@vax1.mankato.msus.edu
Message-ID: <1995May2.222428@vax1.mankato.msus.edu>
Source record: 247382

Hello,

I am having some difficuty with a PacComm G3RUH modem and a Yease 212
2m radio. The TX is OK, but I am having trouble decoding other stations.
I have tapped off of pin 11 of the receiver chip, however I don't seem to have
enough drive for the modem unless the other station overdeviates. Loopback
works just fine. I used an earphone and listened around and found that the
audio at TP4 is significantly less when compared with what is fed into the
modem board. I would think that at TP4 it should be the same. I see that
there is a chip the audio runs through, however I believe that it is just an
active filter.

Any help you can offer would be greatly appreciated!

Comments Please...
Does anyone have experience with Media Vision quad speed cd-rom kits ??
I visited Comdex last week and previewed the MV2200, a SCSI quad kit
that looked pretty good. Media Vision is also coming out with the
MV3200, a quad IDE kit with an access speed of 150ms. I'm very
interested in adding quad cd-rom to my existing system.
THanks for your time in responding...

Why is that QST's fault? I think that they limit their censorship to not
accepting ads for snake oil or pirate cable TV adaptors.

The company that manufacturers the Zappers were all over Dayton. They also make the Rainbow kits.

The owner said the FCC did get on him for his Zappers even though they emit power levels below the min necessary for transmitter licensing or type acceptance etc...

He advertises it as a 10ghz ham radio xmitter now which btw also tests radar detectors. He added a CW key input (really) and make the big red button on top a little red button on the side. No price change. $39.95 kit and $49.95 built (if memory serves me correctly). He said that satisfied the FCC and they will be marketed as I mentioned.

His sales were brisk and he was looking for dealers.

Michael, if you hold down the [B] and [#] keys together while you
turn the radio on, you will enable out of band tx/rx as well as the
AM detector for aircraft band use. Also, this activates the direct
frequency entry to the 100 MHz digit. Go into setup and find the
PLACE command...set it to 100 and you will be in business.

2208. ICOM 775DSP

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-03 00:00:00 UTC
From: dieven@almaden.ibm.COM
Message-ID: <9505031645.ZM16625@penguin.almaden.ibm.com>
Source record: 247288

Re: K2WK's post of 1 May 95 17:33:05 GMT

I played with the ICOM 775DSP at Visalia and again at Dayton. Neither time was it connected to an antenna.

The DSP is applied at audio frequencies, but having it inside the radio is nice integration. I cannot believe the number of extra little boxes my station has grown over the years!

In the same vein, there is a memory keyer inside the 775, and apparantly it can send incrementing serial numbers.

There's more than an IC-765 + a DSP-9 here. The IC-775 is a 200 watt rig, not 100. There's "dual watch", which allows you to listen concurrently to two different frequencies on the same band, like the IC-781. A balance control determines how much of each frequency goes to the headphones. However this isn't the same as two more-or-less complete receivers like the Yaesu FT-1000. With the FT-1000 you can put one receiver in each ear, select different filters for the main and subreceiver, and (with an accessory) listen to a different band with the sub-receiver.

At one time I had asked for an IC-781 without the "scope" and very high price tag. I think ICOM has largely done that with the IC-775DSP. It has dual watch and dual passband tuning. Its DSP is probably at least on a par with its competition. I find annoying limitations with each of the major manufacturer's implementation of the second receiver, so maybe ICOM hasn't done so badly after all.

But I'm not yet ready to trade in my pair of 761's. Buying a complete (used) 2nd rig and using it as the 2nd receiver was cost-effective, gave me a backup rig, and I can put one ear on the DX station and one ear on the pileup. However I'm using a lot more desk space than a 775 takes. I'm certain that any of the newer rigs has better RX performance than my 761.

There are a lot of good Kenwood 930's in service yet......

Dick Dievendorff, AA6MC

2209. Seattle Hams Need Help

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-03 00:00:00 UTC
From: brucem@eskimo.com
Message-ID: <D80zJK.F9K@eskimo.com>
Source record: 247289

FCC TURNS BACK ON HAMS:
PUGET SOUND (SEATTLE) AREA HAMS NEED YOUR HELP

by Bruce Miller, copyright 1995, kc7iay

Reproduction in non-commercial media encouraged and authorized.

For three to five years, Seattle area 2 meter wide-coverage repeaters have been aggressively jammed by a lone, hostile, unlicensed, identified individual. His jamming goes on for hours with music and non-stop foul language. He's interjected himself during autopatches, telling the State Patrol off during a ham's emergency report, and directing sexually foul language to a ham's young daughter who was on the phone. These are just a drop in the bucket of his entire scope of harassment.

The FCC told the local hams to do the footwork--find out who's doing it and get the evidence together. The local hams did this. In the summer of 1992, the Kirkland, WA office of the FCC recommended a $10,000 fine. FCC's case number is NAL215ST0008.

In April 1995, the jammer threatened to send letter bombs to repeater operators. He has threatened to shoot anyone who comes near him. The jammer knows guns and how to load his own ammunition. Hams who are familiar with this individual believe he is capable of making good on his threats.

In a letter dated April 28, 1995 to about 2,000 Puget Sound hams, one of the repeater licensees afflicted by the jammer said "He has basically told the FCC to 'STUFF IT' and the Washington DC office has complied by rescinding his fine because of his inability to pay. The Washington office of the FCC has declined any further action, as of this date." According to Kris McGowan on May 2, 1995, spokesperson for the Kirkland, WA FCC office, the FCC has decided not to pursue collection.

This repeater licensee says further "I can't tell you how demoralizing it is to see this one person's terror tactics bring the entire Western Washington region of Amateur Radio Repeaters to a stand still and then thumb his nose at us and the local FCC. I must confide in you that I have just about reached the end of my ability to shield my system and those who use it from this abuse. If something isn't done by our Government soon, there won't be a repeater to jam."

The FCC's inaction is a slap in the face to hams. First the FCC tells hams to do all the leg work, then the FCC turns around and essentially tells hams, through its inaction, to "Get lost, you aren't important." The FCC is supporting jammers, not hams! McGowan, however, said on May 2, 1995 that "The FCC does not support jammers of any frequencies,

ham or otherwise." Maybe not direct support, but certainly support by inaction.

When the FCC and the community needs emergency communication, who do they call upon? Last year, in the summer of 1994, the forest fires in Eastern Washington required emergency communication. Hams came to the rescue with personnel and radios and communications vans. Upon the suggestion of hams, the FCC authorized the use of the Mission Ridge repeater on 146.670 for fire communications, because it had the best coverage for the affected areas. When hams are needed, they appear. When the FCC is needed, they disappear.

Will the FCC's self-preservation motivate the FCC? On April 21, 1995, the jammer threatened to bomb the Kirkland, WA FCC office. This threat is on tape. Many hams believe he is capable of this both emotionally and technically.

Even after becoming aware of the bomb threat, McGowan said on April 27, 1995 "There is nothing more we can do." On that date, McGowan also said the US Attorney's office has declined to prosecute the case. On May 2, 1995, McGowan said the case on this jammer had never been referred to the US Attorney. Why the change in story? McGowan said she opened up the file. It would appear that the local FCC office has dropped any interest in the case to the extent it doesn't even know what is going on.

If you care about protecting ham frequencies, the lives of hams--and maybe even the lives of FCC employees--how about giving the hams of Seattle some support, and helping to set an enforcement precedent for the protection of ham frequencies?

Here's what you can do. Write letters urging that the person be arrested and his equipment confiscated. Upon direct questioning if this is possible, she said yes. The FCC would have to get the US Attorney involved, who would need to go before a federal magistrate, who would in turn need to issue the right paper work directing US Marshals to carry out the enforcement.

This is a know weakness in the HTX-202. It is not your plug or power supply but the fact you are supplying 13.8v and using the rubber duck. If you use a remote antenna you should not have this problem.

Message-ID: <3o98j2$sif@newsbf02.news.aol.com>
Source record: 247294

I have an HTX-202-it's about a year old. So far, the only problem I have had relates to the external speaker connector. When using a RS speaker mic or even a simple miniature phone plug for an extension speaker, I have to pull out the connection 1/8" or so in order to hear via the external speaker. This is annoying, but the fix is probably simple. I used the rig mobile for awhile, now its my packet radio and doing a great job. That's the only problem I've had with it.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 03/2330Z MAY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 03 MAY AND FORECAST FOR 04 MAY - 06 MAY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 02 May
Daily Proton Fluence >1 MeV: 1.2E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 5.3E+07
X-ray background: <A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
04 May 05 May 06 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 04 May: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: minor storm

Estimated Indices : A K Observed A Index 02 May
Learmonth 30 5445 5333
Fredericksburg 32 38
Planetary 45 33

Observed Kp for 02 May: 2554 4545
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
04 May 30 Minor storm
05 May 25 Active
06 May 20 Active
COMMENT: IPS Geomagnetic Warning 13 was issued on 1 May and is
current for interval 4-7 May. Coronal hole associated geomagnetic
activity has arrived earlier than expected.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
03 May normal poor-fair poor
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
04 May fair poor poor
05 May fair poor poor
06 May normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
03 May -8 depressed 25% 00-07UT, then near predicted monthly
values.

Predicted Monthly T index for May: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
04 May 5 About 10% below predicted monthly values
05 May 10 Near predicted monthly values
06 May 10 Near predicted monthly values
COMMENT: IPS HF Communications Warning 17 was issued on 1 May and is
current for interval 4-6 May. Disturbed conditions arrived earlier
than expected. MUFs at Townsville were near to 15% below predicted
monthly values during local day. MUFS at Hobart were 25% below
predicted monthly values during local day and near predicted monthly
values during local night.

From: donbonds@aol.com
Message-ID: <3o9ev3$1m7@newsbf02.news.aol.com>
Source record: 247299

Has anyone made a DVR - digital voice recorder - from the Radio Schack Voice/Recorder Playback IC (part #276-1325)? This chip provides a 20 second record and playback capacity.
I'm looking for circuit schematic and/or PCB layout to make a DVR to hook up to HF rig.

E-mail back discription of circuit and features incorporated into design.

DonBonds@AOL.com N9IHW

>Never mind the fact that the publishing deadline is so far out that
>it is impossible for dealers to know what their costs are likely to
>be, especially considering the possiblity (currently being realized)
>of a rapid change in the yen/dollar relationship.

No, it's more likely that the dealer is afraid that someone will undercut his published price. (Which may well mean that he's trying to get a higher than rock-bottom price for his product.)

It's no different from discount stores which expel or arrest any one they catch writing down prices on behalf of a competing store -- or for that matter stores that refuse to quote prices by phone (I'm talking about local retailers here, not mail order).

Another possibility is that the ad is being paid for partly by the manufacturer, on condition that it not mention a price lower than a minimum set by that firm for each product.

2221. Re: Questions about new Icom 775DSP

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-03 00:00:00 UTC
From: Barrie Britton <bbritton@prolit.llu.edu>
Message-ID: <Pine.BSD/.3.91.950503203540.2484B-100000@prolit.llu.edu>
Source record: 247301

The interest in the new Icom 775 DSP seems warranted. The one at Visalia wasn't connected to an antenna, so no chance to try it on the air. The DSP hetrodyne killer seems to act in about a quarter of a second or so. Sounds like a long dash, then nothing at all.

It is intended to compete with the FT-1000. Has dual recieve and lots of tricks. The DSP is audio only. IF DSP (as used in the Rotten Johnson reciever) is reputed not to have absolutely top-notch IMD performance yet. Perhaps some combination analog/digital AGC system will result.

Street price (i.e., discounted by the dealer) is supposed to be around $3,700 so the list price is probably #3,995 plus options. It's a nice feeling and looking unit; I can hardly wait to try one on the air.

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

* Effective - December 20, 1994, prospective licensees and upgraders can call the FCC at 1-800-322-1117 to learn whether or not their pending FCC Form 610 license application has been processed, and if a new license has been granted. If a new license has been granted, the person can begin immediate on-the-air operation (using their FCC-issued call sign) with the privileges of the new license as indicated by the FCC (during the telephone inquiry). The hardcopy (printed) license would follow shortly after the license grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround time will be approximately 7-15 days. This includes 1-5 days for the VE team to complete their processing (the team has up to 10 days before they must mail the results), 3-5 days between the VE team and the VEC; 2 business days at the VEC (in some cases only 1 day); and 1-3 business days at the FCC. Allow 5 business days from the date that the VE team estimates the test session results will reach the VEC.

****

The following test session information is provided by the ARRL/VEC for the upcoming eight to twelve week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending

the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

<<various gripes snipped>>

If you want to work with the FCC files from the network, you need about 200mb of disk space free. The best time to download the files (over FTP) is overnight- I usually start at about 10pm west coast time, and the download completes a couple of hours later- by the time I get to work. I pick up new files once a month- not every week.

While the APPL.DAT file fron the FCC in uncompressed form is around 140mb, you can strip it down to a more manageable size- around 50mb. I've written a set of c programs (for the Mac, but in ANSI c, so they should be somewhat portable) for stripping down the file, merging in license class information, building an index, and searching the file by callsign and zipcode. If you're interested in the programs drop me a note.

The hardcopy (printed) license would follow shortly after the license grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround time will be approximately 7-15 days. This includes 1-5 days for the VE team to complete their processing (the team has up to 10 days before they must mail the results), 3-5 days between the VE team and the VEC; 2 business days at the VEC (in some cases only 1 day); and 1-3 business days at the FCC. Allow 5 business days from the date that the VE team estimates the test session results will reach the VEC.

****

The following test session information is provided by the ARRL/VEC for the upcoming eight to twelve week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending

the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC which is coordinating this examination. This single-character designator denotes the VEC as defined below. An "A" (for example) indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not find any examinations listed for your area, you may contact any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1995 test fee is $5.90.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;
704-596-2168

D = Great Lakes ARC VEC Inc., 3040 Harrison St, Glenview, IL 60025;
708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;
808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;
(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;
414-774-6999.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,
301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;
408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;
919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,
Knoxville, TN 37912-2500; 615-688-7771.
The 1995 test fee is $5.90.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443
The 1995 test fee is $5.90.

steveh@cv.hp.com (Steve Harper) writes:

>Right on!

Right on what? Why resort to slang when it's just as easy to write "You're entirely correct", or "I agree whole-heartedly"?

>If only that were the only example of incorrect grammar,
>spelling, etc...
^^^
Redundant use of `only'. No need for the ellipsis. `Were' or `was'?

>It really does change what others think of you and what
>you say when apparent ignorance and/or sloppiness is so obvious...
^^^
How could it change what one says? No need for the ellipsis.

>Oh, by the way, in the last line of your post...
^^^ No need for the ellipsis.

>"make's" is neither possessive nor an appropriate contraction. It should
>just be "makes"... :)
^^^ No need for the ellipsis.

Now, most of us are at work and thus in a rush to express our opinions on here, so make an attempt to forgive us for the spelling and grammar errors, okay?

73 from Hawaii,
Jeff NH6IL

Listen to the CW portion - the operators are all fine gentlemen (except
for the ladies! The YLs are excellent ops). No fighting or swearing;
CW seems to bring out the best in folks.

Just because you won't find the phrase `ham radio' in Part 97 doesn't stop us from calling it that. The FAA regs say nothing about `sport flying' yet ask any private pilot about his `sport'.

Jeff NH6IL

>they are not good). OOK can approach the same Prob of bit error as non
>coherent Binary FSK. By going to a cohehrent M-ary FSK, the required
>signal to noise ratio is reduced. See Sklar for more details.

Okay Shawn, I've got a challange for you. You construct an n-ary FSK system from scratch and I'll construct a ook communications system from scratch; let's see who will get on the air quicker, and have more QSOs. (My definition of building from scratch is using discrete components. Plugging ICs into sockets is not `building from scratch'.)

> I don't want HF privs. Let's face it, theres only 7MHz od bandwidth
>down there. I just don't like people making CW sound better then it really
>is.

If you want to restrict your communications life to a radius of 5-10 miles (unless you insist on using someone else's radio [i.e. repeater], then that's fine. I just worked someone in Tonga (in the South Pacific) using a homebuilt 5W transmitter (CW of course!). The other fellow also had a homebuilt rig (and you'll never be able to have a QSO with him, for he only has CW capabilities).

>Thanks,
>Marty Baxter, N7UDC

Hi Marty, I am not an expert by any means, just happen to have what you may
be looking for here.
From a packet BBS bulliten, VE7CEI sends the info that the data is 4800 baud,
at either 7n1 or 8n1 on a serial port, to his procomm program.
He states that he has 2 files on FTP sundae.triumf.ca /pub/peter
"nmeaws.txt" and "nmea.type.txt", his E-mail is bennett@erich.triumf.ca

Possibly the program that you could use easiest is the APRS68a.zip which is
the packet mapping program for interfacing with GPS. Version 6.8a is the
latest seen. You may also have to search for a map file for your area or
make one with the APRS data. There are maps made for most of the major
metro areas of the U.S. and parts of Canada, but the maps are user generated.
I have seen APRS file areas on FTP oak.oalkand.edu, and a couple of the other
popular ham sites under their packet file areas.

Hope this helps.

Before I owned my own business I had the same opinion. Now when I am paying for advertising I understand the problem. You need to submit ads 3-4 months before they appear. If I posted prices, I would have problems such as Anli raising prices by 15% with 2 week advance notice. Also, Walnut Creek raised some prices *immediately* and lowered some at the same time. Also, companies like Antennas West and Oak Hills Research sometimes run 1 month specials that I pass on. With the ads *so* expensive, you'd hate to waste the money and find out you are selling stuff at silly prices because you didnt have the advance info.

With the 20% devaluation of the dollar vs. yen in the last few months, I'd imagine they are all scared to try to guess what the prices will be in another few months!

An advantage of advertising on the internet, up-to-the-minute best prices.

>>I am curious as to just what antenna you carry in your pack? <<

I carry a 1/2 wave Hot Rod in the inside breast pocket of my ham jacket when it's not on my HT (like when I am in the car, and hooked up to the roof mag mount). So, a 1/2 wave antenna for the HT is no hassle in the pack.

2239. VHF Packet on FD

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-03 00:00:00 UTC
From: gerheim@sonalysts.com
Message-ID: <3o7oin$7li@hatch.sonalysts.com>
Source record: 247399

I already emailed the arrl on this one, but haven't received a reply
yet:

Is it within the contest rules to use a VHF packet TNC's mailbox
to realize contest exchanges? The station could beacon a 5 or 10
minute intervals, the connect message can contain the contest
data, and the other stations could leave their data in the mailbox.
The station would then be operating unattended.

Any comments?

2240. ARLB048 Rules changes proposed

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-03 00:00:00 UTC
From: w1aw@arrl.org
Message-ID: <$arlb048.1995@ampr.org>
Source record: 247400
Cross-posted to: rec.radio.info,rec.radio.amateur.misc

SB QST @ ARL $ARLB048
ARLB048 Rules changes proposed

ZCZC AG15
QST de W1AW
ARRL Bulletin 48 ARLB048
From ARRL Headquarters
Newington CT May 3, 1995
To all radio amateurs

SB QST ARL ARLB048
ARLB048 Rules changes proposed

The FCC has proposed amateur service rules changes that would affect license examinations, call signs for special event stations, and indicators of portable operation.

The FCC proposes to designate one volunteer examiner of a team as the examination session manager. The Commission also proposes to give examination credit to former licensees, and to ensure that only ''bona fide'' Amateur Radio clubs obtain station licenses by increasing to four persons the minimum number of members required to constitute an organization eligible for a club station license (an ARRL suggestion).

The FCC also has proposed another change suggested by the ARRL: as part of the vanity call sign proceeding, the Commission proposes to make one-by-one call signs available to ''stations operating in conjunction with short-term events of special significance to the amateur service community.''

And the FCC also has proposed to allow portable indicators, such as /KP2, to be included before, after, or both before and after, the assigned call sign.

These proposals in WT Docket 95-57 were announced May 1, 1995. No comment deadline has been announced.

2242. VHF GE MASTR II Repeater Conversion - Desensing

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-03 00:00:00 UTC
From: Dave Johnson <djohnson@gray>
Message-ID: <Pine.SUN.3.91.950502193044.9471B-100000@gray>
Source record: 247402

I have accomplished all of the "mechanical" aspects of converting a VHF GE MASTR II to repeater use. Nothing in particular has been done to shield or separate the TX and RX and the former is speaking to (desensing) the latter. Can anyone recommend a reference that deals with additional shielding that will isolate the TX and RX? Thanks.

2243. Morse Code Alive and Well in the US Armed Forces...NOT!

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-03 00:00:00 UTC
From: kevin.jessup@mail.mei.com
Message-ID: <kevin.jessup.591.0027E80C@mail.mei.com>
Source record: 247403

In article <Pine.OSF.3.91.950502205705.8128B-100000@holmes.sgate.com> Frank Donovan <donovanf@holmes.sgate.com> writes:

>Despite reports of the demise of Morse Code, I'm pleased to report that I
>had the opportunity today to ask the Commander in Chief of the U.S.
>Special Operations Command about the status of Morse Code communications
>by U.S. Special Operations Forces.

For an honest and unbiased look at what is really happening in current-day military communications and a fascinating look at what is planned for the future, I invite anyone interested in the truth to obtain a copy of the January/February 1995 issue of "Wireless" magazine. The cover-story was written by General Gordon R. Sullivan, Chief of Staff of the United States Army.

It details existing and future work being done by the Army Digitization Office in the area of integrated tactical military communications. Many advanced technologies are discussed. Nowhere is Morse Code mentioned.

Wirless Magazine is available free of charge to engineering and telecommnications professionals. Others may obtain the bimonthly magazine for $30.00 anually. Call 1-800-915-0999 for subscription info. I am in now way affiliated with Wireless magazine, but I AM a happy subscriber.

If you're a preservationist, subscribe to the philosophy of the initial post. If you're seriously interested in communications as a whole and more than the limited capabilities of the simplest narrow-band analog RF modes, there is far more info available than that found in the amateur radio newsgroups and the pages of QST.

To borrow someone else's words..."73, and live better digitally!"

FAQ about IOTA - Frequently Asked Questions about Island On The Air award

Edited by IK1TZO (Editor of Island News Bulletin)
Version 1.0
Date may 2, 1995

Questions discussed in this FAQ:

** What is IOTA ?
** How to partecipate to IOTA program ?
** Where to find information ?
** Who is my authorised Checkpoint ?
** DXCC Countries Islands are valid IOTA references ?
** What are the IOTA frequencies ?

What is IOTA ?

IOTA is: Island On The Air.

IOTA award was created 30 years ago by Geoff Watts,(an English SWL).
Since 1985 RSGB manage IOTA program, devoted to Island Chasers (DXers
interested to make contacts with islands worldwide).

In IOTA award, Islands are grouped into "groups" (because they are far too
many!). Sometimes an Island can count as separate.

Every group, is identified by a REFERENCE NUMBER. (i.e. EU-005,
that is Great Britain), and don't matter which Island of the group You
work.

Your goal is to contact major number of IOTA groups.

There are several IOTA awards available, graded in difficulty.

Basic IOTA award can be obtained when you have a confirm from a minimum of
100 different IOTA groups.

IOTA award is a fast growing award, where You can be an Hunter or a IOTA
activator.

You can feel the emotion to be the PileUp master, without going to
a rare DX site. If You live near the sea, surely there is an Island listed
on IOTA Directory, where You could go.

There are many Island Maniacs worldwide, that expect Your DXpedition!

Every day there are many Islands active on the air, and You can partecipate into PileUp to increase your IOTA score.

** How to partecipate to IOTA program ?

To partecipate to IOTA program, you must obtain a IOTA Directory, that is a book with all detailed rules, complete list of world groups with relative reference numbers and checklist.

When you obtain a IOTA Directory, you receive a Directory number, (i.e. I-002 for Italy).
The Directory number is personal and permits You to obtain IOTA awards and endorsements.

After You have obtained the requested numbers of IOTA groups for the basic awards, You must submit QSLs to Your local IOTA Check Point and wait for the award certificate.

** Where to find information ?

You can find information about IOTA Island activity, in magazines, Packet Clusters, BBSes and now in Internet, reading messages, reports and bulletins (like Island News Bulletin, edited by IK1TZO and posted on rec.radio.amateur.misc Usenet Newsgroup.

If You have an Internet access You can receive a copy of Island News Bulletin (INB) via e-mail, sending a message to IK1TZO@inrete.alpcom.it with the word "subscribe" into message.

If You have questions about IOTA not covered in this FAQ file, please refer to Your local Check Point or Country Assistant, or send an e-mail to me: IK1TZO@inrete.alpcom.it

---

** How to obtain IOTA Directory ?

Following points are the only authorised from IOTA Committee to distribute IOTA Directory:

Italy : (Italian paper version, Italian/English software version for EasyLog 4)
Microware Software
c/o Piero Pirrone, IK1TZO
Via V. Veneto 80
I-14019 Villanova d'Asti - Italy
(Cost: L. 15.000 or 10 US $)

North America only:
Dewitt L. Jones, W4BAA
P.O. Box 379, Glen Arbor, MI 49636 - USA
(Cost: 10 US $)

French: Les Nouvelles DX (LNDX)
c/o Jean Michel Duthilleul, F6AJA
515 Rue du Petit Hem,
F-59870 Bouvignies - France
(Cost: 45 FF)

German: Hans Georg Goebel, DK1RV
Postfach, 1114, D-57235 Netphen, Germany
(Cost: 15 DM)

German Braille:
IRF Gelsenkirchen, Postgiroamt Dortmund 203820-462
BLZ 44010046, Germany
(Cost: 25 DM for Braille version/talking cassette -
quote order No.X25)

Polish: Rafal Krawiec, SP6TPM
P.O. Box 22,
PL-48100 Glubczyce - Poland
(Cost: 80.000 Zl)

Portuguese:
Luis Sutil Teixeira, CT4NH
Rua Visconde Moreira de Rey 1,
Carnaxide P-2795 Linda-a Velha - Portugal
(Cost: 1.200 Esc, in Portugal, 12 US $ elsewhere)

Russian:
Victor Russinov, UT8LL
P.O. Box 44, 310052 Kharkov
Ukraine
(Cost: 6 IRCs in Ukraine, 8 IRC Russia & other CIS countries,
12 IRCs elsewhere)

Spanish:
URE-Programa IOTA
Apartado Postal 220
E-28080 Madrid - Spain
(Cost: 1.200 Ptas in Spain, 1.500 Ptas elsewhere)

Remember:
No part of IOTA Directory can be translated, reproduced in any form,
except by written permission of the author (G3KMA - Roger Balister, RSGB
IOTA Director).

It is forbidden:
* distribution for sale or otherwise of the Directory, including the list
of islands, in English or any foreign language,
* copying of any part of the Directory for distribution,
* transmission of data from the Directory over networks
* use of data from the Directory in any computer product, including DX
logging systems, for distribution.

** Who is my authorised Checkpoint ?

Check Point IOTA, are Hams, authorised from IOTA Committee to validate Your QSL cards.

They are:

UK, Ireland, Philip Marsh, G4WFZ, 28 Orcheston Road,
Portugal, Spain Charminster, Bournemouth, Dorset BH8 8SR, England

Benelux, Denmark,
France, Germany Brian Adams, G4RFV, 38 Waterloo Road, Poole,
Dorset BH17 7LF, England

Italy Massimo Balsamo, IK1GPG, Strada Statale 28 Nord 7,
I-12084 Mondovi' (CN), Italy

All other European
countries John Hall, G3TOK, 54 South Eden Park Road,
Beckenham, Kent BR3 3BG, England

USA and all Caribbean and
Pacific island stations
with US Zip codes
Call areas 1, 2 & 3 Tom Webster, WT2O, 72 Thornley Road, Eatontown,
NJ 07724, USA

Call areas 4, 5 & 6 Don Chamberlain, W9DC, 2 Coxswain, Salem,
SC 29676, USA

Call areas 7, 8, 9 & 0
All Canada & Mexico Dewitt L. Jones, W4BAA, P.O. Box 379, Glen Arbor,
MI 49636, USA

Australia, New Zealand
and other Pacific Jim Smith, VK9NS, HIDXA, P.O. Box 90,
Norfolk Island, Australia 2899

Africa, Asia, Central
and South America Ray Small, G3ALI, 13 Rydal Close, Stowmarket,
Suffolk IP14 1QX, England

** DXCC Countries Islands are valid IOTA references ?

The Countries Islands count separately. An island shared by two or more DXCC countries count as a single credit.

Largest islands with a size of more than 25,000 square miles count separately.

** What are the IOTA frequencies ?

The main frequency is 14.260 MHz.

SSB frequencies are:
3.755 MHz 7.055 MHz 18.128 MHz 21.260 MHz
24.950 MHz

CW frequencies are:
3.530 MHz 10.115 MHz 14.040 MHz 18.098 MHz
21.040 MHz 24.920 MHz 28.040 MHz

40m:
It is recommended that operations should include a frequency above 7.025
when the band is open to North America.

14.260 is the frequency used from nets around the world for information
when band is open to North America.

We encourage diffusion of this FAQ on every networks, like Clusters, BBSes,
Internet FTP, and others media.

How to reach us for any questions:

And how about adding a couple of pages to color in with your crayons.
Sorry, don't mean to sound testy, but I appreciate what informational
content QST does contain, and somehow turning it into a showy photo mag
would indeed make it a "rag". Go read some of the postings in
rec.railroad.model about Model Railroader magazine and how all the emphasis
on photos has degraded the quality of the magazine.

Just MHO.

is a sign of a hopeless geek. <<<

>> Perhaps, but there are likely 700,000 amateurs who will
disagree. <<

> 700,000 hopeless geeks are uptight about their image?
What's the problem? I'm not uptight about mine :-) <

I am proud to be a "hopeless geek". That's why I placed my
callsign on my automobile, and my jacket. Yup, that's what I am -
a hopeless geek. But, I know a bit about radio communications,
and I have fun building my own equipment. The unlicensed cell
phone user can't do that - they can only use FCC approved, type-
accepted equipment. I find homebrewing to be fun. But, I guess
that also makes me a geek.

A few more things about Amateur Radio - try and use your cell
phone to contact the MIR space station, or any of the Space
Shuttles. Yup, more geek stuff.

Sounds to me like you you are changing the transmit offset amount (p.29 of my manual). What you want to do is:
1) Store your RX data (including PL)
2) Select your TX freq, then
3) hold the [F] key for more than 1 second, then turn the ENC/SQL control to select the memory channel containing the RX freq, and then press and hold the PTT, and while holding the PTT, press the [MR] button.

These instructions are on Page 22 of my manual.

Yes, it's a big manual, and covers a lot of sophisticated features, but take your time and you will learn more about your radio.

Tell me whether or not this works for you.

Looks like this post didn't go the first time, so trying it again.
My apoligies if it shows up twice.

>You are obviously uninformed about the facts in this situation.
>The rules DO allow for bulletin stations to have one-way
>transmissions. It IS specifically provided for. Before you join
>the little bandwagon of folks bad-mouthing Glenn, read all of
>the rules.

First let me state that I have read the rules and understand
perfectly that the rules allow for one-way transmissions of
bulletins. Secondly, I am not on any bandwagon for or against
K1MAN. Unfortunately the FCC rules do not describe what does
or does not constitute an information bulletin. How would you
describe an information bulletin? Bulletins are usually short
and to the point on a matter. I think that a 3 hour transmission
of recorded talk shows, speeches and call-ins on a scheduled basis is
stretching it a bit to call that an information bulletin.
Now before you get your coax all in a knot, let me say I occasionally
listen to K1MAN's broadcast and often find it interesting, but I
would not consider his transmissions to be strictly information
bulletins, but simply a broadcast on the subject of amateur radio and
often he is pushing his particular view of an issue. I don't call that
an information bulletin.
I think if the FCC really wanted to, they could apply the no
broadcasting rule here, but so far they evidently do not see the
need to do so.
Frankly I really see nothing wrong with this type of broadcast as
long as the subject is contained to amateur radio and is not used as
a launching pad for one's own personal agenda.
Perhaps the rules need to be better clarified to allow this type
of transmission. But then what happens if 100 other stations decide
to have their own broadcast service and we have the bands full of
nothing but broadcasters? This is not the purpose of amateur radio.
Perhaps the rules should place a time limit on each one-way transmission
and limit the number of transmissions in a given time period, say 30
minutes/transmission, 1 or 2 times in a 7 day period and confine the
broadcast to certain bulletin frequencies. Maybe also requiring a special
permit to be a broadcaster, assigning a frequency and time for the broadcast.
Just a thought. This would mean more administration on the part of the FCC
so I think you can scratch that idea. What are your thoughts on this?
W5YI, in his petition to eliminate broadcasting on the HF bands,
claims that these type transmissions cause disharmony on amateur

radio because other stations jam the frequencies and cause bad
international good-will and all that stuff. I had not listened to K1MAN
for some time, so I listened today. I did not hear one station trying
to cause intereference on his frequency. I know W5YI and I am
not convinced that is his real motive.
From what I have read here on the forum, it seems the problems
arise because some folks feel that K1MAN is bullying other stations
around by coming up on frequency with his transmissions without regard
to who may be using that frequency. I don't recall ever hearing W1AW ask
if the frequency was in use before transmitting bulletins. But that
is OK with me, if I am cognizant of those frequencies being used
for those purposes, I simply find another. It's no big deal!

Bill - K5MIL

[deletions]

Warning - I am _not_ a lawyer.

That ain't the way I read section (c). Looks like what's prohibited is
tying the warranty to use of specific goods and services. For example,
"This warranty shall be void unless genuine GM replacement parts are used"

or "Use of any cell phone other than an AT&T cell phone will void this warranty."

Section (c) as quoted above doesn't appear to prevent a manufacturer or dealer from voiding warranty coverage if one of a _class_ of items is used, for example any transmitting device, or any transmitting device which radiates more than 5 watts of rf energy.

Look in your manual. Er2 isn't a power problem, it is a PLL unlock
problem and is common when lots of voltage is powering a unit with a
rubber duck on top. Are you using a duck with 12v?

2259. EOSS Balloons in Colorado Springs Rescheduled

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-03 00:00:00 UTC
From: rickvg@usa.net
Message-ID: <SVxflSEHGEP3075yn@usa.net>
Source record: 247419

Weather Delay

We suffered bad weather at the launch site again on Sunday. The fog was so thick that visibility decreased to around 100 yards at times. As a result it was necessary to scrub the launches of these payloads. We intend to try again next week on Saturday May 6, 1995. All other data remains the same!

FLIGHT PROFILE FOR EOSS 22

LAUNCH DATE: May 6, 1995
LAUNCH SITE: Air Force Academy Parade Grounds
Launch coordinates:

39'00.56 N
104'52.90 W

LAUNCH TIME : 13:00 UTC
EXPECTED TRACK: Between 90 degrees and 145 degrees azimuth
FLIGHT EXPERIMENT: Atmospheric Sampling of Inversion Layer
SECONDARY EXPERIMENT: Ozone sampling throughout the flight.
PROJECT INTEGRATOR: University of Colorado at Colorado Springs, Jack Crabtree AA0P

Shuttle II FREQUENCIES:

Telemetry:
144.290 MHz FM (1 Watt output) - The Packet telemetry stream is in ax.25 format at 1200 baud and is readable in plain english for the most part. Included in each telemetry frame is an APRS position string (APRS users see note below). Every few minutes a CW ID is transmitted on this frequency.

Beacon:
147.520 MHz FM (250 milliWatt output) - Continuous CW ID

ATV:
439.250 MHz AM (1 Watt output) - Color NTSC video

10 Meter Beacon:
28.322 MHz USB (500 milliWatt output) - Continuous CW ID (this payload may or may not fly. It is tentative as of this writing)

Foxhunters:

Pikes Peak FM Association 448.450 MHz

HF Net:

7.235 MHz KA0DPC Sparky will handle the HF net.

PURPOSE OF THE FLIGHT:

Two experiments will be flown.

1.) A gas capture experiment to sample air below and above the thermal inversion that regularly resides above Colorado Springs. These samples will be obtained by using computer controlled, evacuated canisters. These canisters will be recovered and the gasses they capture will be analyzed for their constituents.

Should there be no inversion layer this late in the year, a distinct possibility, then the flight will serve as a test of the gas capture mechanism.

2.) Ozone will constantly be monitored throughout the flight. This information will be transmitted to the ground via telemetry channels in the EOSS "Shuttle II" where they will be captured on computer for later analysis.

FLIGHT PROFILE FOR EOSS-23

Air Force Academy Test Flight

LAUNCH DATE: May 6, 1995
LAUNCH SITE: Air Force Academy Parade Grounds
Launch coordinates:

39'00.56 N
104'52.90 W

LAUNCH TIME : 12:00 UTC
EXPECTED TRACK: Between 90 degrees and 145 degrees azimuth
FLIGHT EXPERIMENT: Satellite Test
PROJECT INTEGRATOR: United States Air Force Academy - Gil Moore

Shuttle I FREQUENCIES:

Telemetry:
144.340 MHz FM (1 Watt output) - The Packet telemetry stream is in ax.25 format at 1200 baud and is readable in plain english for the most part. Included in each telemetry frame is an APRS position string (APRS users see note below). Every few minutes a CW ID is transmitted on this frequency.

Cross Band Repeater:
446.000 MHz FM Input Frequency
147.555 MHz FM (250 milliWatt output) Output Frequency

ATV:
426.250 MHz AM (1 Watt output) - NTSC video

Foxhunters:

Pikes Peak FM Association 448.450 MHz

PURPOSE OF THE FLIGHT:

1.) The Air Force Academy is planning a Space Shuttle Get Away Special Experiment (GAS). GAS experiments are flown inside containers in the orbiter's payload bay and are activated once the Shuttle has reached orbit (or at a predetermined time during the flight).

The Academy's satellite measures approximately 18" on a side. It is equipped with solar panels and is outfitted with an attitude control system. This balloon flight will be a test of that attitude control system's ability to keep the satellite oriented on the sun using a solar sensor.

2.) EOSS will be flying a crossband repeater to assist the tracking and recovery teams. If the frequency is not being used for recovery efforts we may invite remote stations to use the repeater under the direction of net control. However, tracking and recovery operations will take priority on the repeater. Listen for and give priority to WA0GEH, Marty, our logistics coordinator for the fox hunting teams.

notes:

The EOSS-23 balloon will hover at 107,000 feet until the payload is commanded to cut down. The duration of the flight is undetermined at this time. However, it is hoped that the flight will remain within the borders of Colorado as our fox hunting teams will be quite busy recovering two payloads this day.

The Academy flight is entirely their work. They are offering EOSS payload space (we tie onto their support cable) in exchange for our recovery efforts.

Automatic Position Reporting System (APRS):

EOSS Shuttle controllers now beacon on the packet telemetry frequency with an APRS position string. If you are running APRS you should be able to graphically track the progress of the flight on the "CODENVER.MAP" map file. The Shuttle is not a TNC equipped packet station. It only reads data from various sensors and experiments and formats and transmits that data in AX.25. Therefore, beacons from other APRS stations will NOT be retransmitted (digi). So, in order to minimize possible interference with hams in your area, we request you turn off the position beacons in APRS. Thanks!

ATV:

The Amateur Video Signals from the payload may be picked up by a cable ready TV set. However, you need to be very close to the balloon, and have a directional antenna to do this as cable receivers do not have much sensitivity (why should they?).

Who Can Hear It:

Almost all our transmitters are on VHF or above frequencies. Therefore, you need to be line of site to the payload to hear/see it. Since the payload rises to an altitude of over 90,000 feet on most missions, reception is usually possible for folks in most of Kansas, most of Nebraska, most of Wyoming, extreme south eastern Idaho, eastern Utah, north eastern Arizona, most of New Mexico, northern Texas, and western Oklahoma. DO NOT BE DISCOURAGED by the apparent low power of our signals. I usually monitor the Beacon with an HT from the ground station throughout the flight. The signal is strong even at 130 miles and I only lose it when the balloon descends below my horizon.

What's the address at the FCC (or was it the ARRL) where I can send
a SASE to get the 610-V when it comes out?

Thanks in advance.

: Todd Little (little@iamu.chi.dec.com) wrote:

: : |>According to the definition you've kindly provided, CW is far from
: : |>obsolete, since its still in use, and in fashion, with a great number
: : |>of amateurs today.

: : That's a pretty good bending of the definition of fashion. With your
: : definition of fashion, Model T's and flint lock rifles are still in
: : fashion.

: I think you may have bent it too far in the other direction. :-)
: Model Ts and flint-lock rifles are not used by very many people who drive
: cars of who shoot guns. Perhaps a better analogy would be to say that
: although technology has given us better alternatives than walking, walking
: (by choice, not by necessity) is still quite in fashion, being used by many
: people.

Quite right, I would agree that walking continues to be a form
transportation, regardless of the possible alternatives offered by
technology, i.e. trains, planes and automobiles. However, if one wishes
to drive (or pilot, as the case may be) these vehicles, a test is
administered to determine the proficiency of the candidate. However, as
far as I am aware, there is nothing in any of these tests that require
the individual to prove that they can indeed "walk".

: : Given that no other radio service requires the use of Morse Code makes
: : claiming it "in fashion" pretty far fetched. I suppose those other services
: : dropped their use of Morse Code for other less capable means. Yeah, that's it!

: No law requires walking, either, but that has not made it "out of fashion"
: in my book. :-)

Although I can only speak for myself, I am sure others who have similar
views as mine wish to point out that we are not in favour of eliminating
the operation of CW using the Morse code. We believe that it should be
left to individual choice. However, we do not believe that government
testing of the indivdual on their knowledge of an encoding scheme which
is used (or more correctly, will be) by no one else is no longer
justifiable. If Morse code is such an enjoyable mode to operate at an
amateur station, then it should be able to survive on its own merits
without having to depend on the force of government fiat. To paraphrase
with the walking analogy, it would not be justifiable to demand that
someone prove that they can walk if they are presenting themselves for a
driving test.

I also found that the data lines in my home security system
caused a LOT of annoying buzz in the 15-30MHz range of the
shortwave spectrum. Putting a switch on the system in
the basement to cut off the alarm lines cured it.

Just have to remember to flip the switch back when
done SWL-ing!

Mike

curryds@craft.camp.clarkson.edu (David Curry (KB2TJQ)) writes:
: What exactly is a trunked radio system? I have heard this phrase
: and never understood what it meant. I have heard of repeaters being
: "trunked" . Thanks.
:
: David
: KB2TJQ
:

Trunked radio is like standing in one line at a bank, waiting
for the next available teller. The opposite would be several
short lines behind each of the tellers.

It is more efficient to distribute customers between tellers
as soon as a teller becomes available, rather than risking
one teller having a long busy line, and another with no
customers in line.

In a trunked radio system, a pool of frequencies is shared
amonst the users using the system. It is all under very fast,
real-time computer control. When a police car needs to talk, the
cop presses the mike. The central trunking computer tells the
police car's radio which is the next available frequency in
the pool, and uses it. Thus, frequencies tend to bounce around.
When not in use, individual radios are constantly listening to
a control channel, which is used to tell the radio which frequency
to shift to. The same goes for cellular phones. The trunking
system hands you off to the next cell, on another frequency, when
you go from one cell to the next as you travel in your car.

The whole idea is that you have a much more efficient use of
frequencies where there are a large number of radios that need
to use them. It also eases crowding on one specific channel.

When not in use, all cellular phones scan 21 standard control
frequencies for the strongest one. When you make a call,
the trunking system, via the nearest repeater (based on
control channel signal strength) is told of your presence and
begins to communicate with your cell phone to complete the call
and make sure the billing goes to the right number.

Scanning of trunked systems is a pain because a single, whole
conversation rarely remains on one frequency. You have to
hunt around to find the frequency the converstation was
handed off to.

I have left out a lot of detail, but that's the basics.

Mike

and 15m.

IOTA CONTEST 1995

1. General

The aim of the contest is to promote contacts between stations in
qualifying IOTA island groups and the rest of the world and to encourage
expeditions to IOTA islands.
UK entrants must be RSGB members, see the general rules for HF contests
published in January 1995 Radio Communication. Note: mainland G/GM/GW =
EU-005 mainland GI/EI = EU-115.

2. When

1200 UTC Saturday 29th July to 1200 UTC Sunday 30th July 1995.

3. Bands and Modes

3.5, 7, 14, 21 and 28 MHz, CW and SSB. IARU bandplans must be observed, and
CW contacts must be made only in the rocognised CW ends of the bands.
Contest preferred segments must also be observed, i.e. no operation must
take place on 3.56-3.6 MHz, 3.65-3.7 MHz, 14.06-14.125 and 14.3-14.35 MHz.

4. Categories

(a) single operator. CW only, SSB only or mixed mode.
(b) single operator limited. CW only, SSB only or mixed-mode. Operation is
limited to 12 hours, and contacts on THREE bands count for points. Off
periods must be clearly marked and must be a minimum of 60 minutes in
length.
(c) Multi operator single transmitter. Mixed mode. Only one trasmitted

signal. Use of packet cluster or other assistance during the contest places the entrant in the multi operator category.

5. Sections

(a) IOTA Island Stations. Stations on an Island with an IOTA reference, for example AS-007, EU-005. This section includes the British Isles. Entrants intending to operate from a location whose IOTA status is not clear are advised to confirm validity by reference to the IOTA Directory available from RSGB Headquarters. Please indicate on the entry whether the station is permanent or a contest DXpedition, i.e. antennas and equipment installed specifically for the contest.
(b) World (listed by continent) Any station in a location wich does not have an IOTA reference.
(c) Short Wave Listener. See rule 10.
The format of the listings will depend on the number of entries received.

6. Exchange

Send RS(T) and serial number starting from 001, plus IOTA reference number if applicable. Do not use separate numbering systems for CW and SSB. Stations may be contacted on both CW and SSB on each band. Entrants in section (a) must send their IOTA reference as part of each contact.

7. Scoring

(a) QSO points. Each contact with an IOTA Island counts 15 points. Other contacts count 5 point, except contacts with the entrant's own Country or own IOTA reference, wich count 2 points.
(b) Multiplier. The multiplier is the total of different IOTA references contacted on each band on CW, plus the total of different IOTA references contacted on each band on SSB.
(c) Total score. The score is the total of QSO points on all bands, added together, multiplied by the total of multipliers.

8. Logs

K stations must use a Summary Sheet and RSGB-style Log sheets, other entrants may use log sheets in local format, together with a summary and signed declaration that the rules and licence conditions have been complied with. Separate log sheets must be used for each band (but not each mode). Single mode entrants who make contacts on the other mode, should submit these separately as checklogs. Logs must show: time, callsign, RST/serial number/IOTA reference sent, RST/serial number/IOTA reference received, multiplier claimed, and QSO points. Entrants are encouraged to submit cross check ("dupe") sheets and a multiplier list. Logs on computer disk are welcomed, in accordance with RSGB format.
Entries must be postmarked 26 august at the latest, and mailed to the following address:

RSGB IOTA Contest, c/o S.Knowles G3UFY,
77 Bensham Manor Road, Thornton Heath,

Surrey, CR7 7AF, England

IOTA stations must state their location, i.e. Island from where they operated, as well as their IOTA reference number. Checklogs from non-entrants are welcomed.

9. Penalties

Points may deducted, or entrants disqualified, for violation of the rules or the spirit of the contest. This includes refusal by IOTA island stations to make contacts with their own country when requested. Use of third party to make contacts on a list or net is also agains the spirit and may lead to disqualification. Duplicate contacts must be marked as such with no points claimed. Unmarked duplicates will be penalised at ten times the claimed points, and excessive duplicates may cause disqualification.

10. SWL Contest

Scoring is as for the transmitting contest. Logs must be separate for each band, and show: time, callsign of station heard, RST/serial number/IOTA reference sent, callsign of station being worked, multiplier claimed, and QSO points. Under "callsign of station being worked", there must be at least two other QSOs before a callsign is repeated, or else ten minutes must have elapsed. If both sides of a QSO can be heard, they can be logged separately for points if appropriate.

11. Awards

(a) The IOTA trophy (non-returnable) will be presented by the IOTA Committee to the entrant, whether single operator or a multi-operator group in the IOTA Island stations sections (DXpediton sub section), with the overall highest checked score, regardless of mode.
(b) The CDXC Geoff Watts memorial trophy, (non-returnable) will be presented to the entrant, whether single-operator or a multi-operator group in the IOTA Island station section (non-DXpediton subsection) with the overall highest checked score regardless of mode.
(c) The DX News Sheet trophy (retained for one year only), will be presented by the Editor of DX News Sheet to the British entrant operating from a location in the UK (including GD, GJ, and GU) with the highest checked score in the single operator SSB category, (category A - open section).
(d) The David King G3PFS trophy, in memory of Geoff Watts, (retained for one year only) will be presented to the British entrant operating from a location in the UK (including GD, GJ and GU) with the highest checked score in the single operator SSB category, (category B - limited 12 hr section).
(e) Certificates will be awarded to leading stations in each category and section, and in each continent, according to entry.

12. Note from IOTA Director

Amateurs planning to activate an all-time new one for IOTA over the IOTA contest weekend should, if possible, arrange to commence their operation in

the preceding 24 hours to enable the new reference number to be issued before the start of the contest. Once the contest is under way, it will not be possible to issue a new number and, without this, contacts made will not count as island contacts.

FAQ about IOTA - Frequently Asked Questions about Island On The Air award

---

Questions discussed in this FAQ:

** What is IOTA ?
** How to partecipate to IOTA program ?
** Where to find information ?
** Who is my authorised Checkpoint ?
** DXCC Countries Islands are valid IOTA references ?
** What are the IOTA frequencies ?

What is IOTA ?

IOTA is: Island On The Air.

IOTA award was created 30 years ago by Geoff Watts,(an English SWL). Since 1985 RSGB manage IOTA program, devoted to Island Chasers (DXers interested to make contacts with islands worldwide).

In IOTA award, Islands are grouped into "groups" (because they are far too many!). Sometimes an Island can count as separate.

Every group, is identified by a REFERENCE NUMBER. (i.e. EU-005, that is Great Britain), and don't matter which Island of the group You work.

Your goal is to contact major number of IOTA groups.

There are several IOTA awards available, graded in difficulty.

Basic IOTA award can be obtained when you have a confirm from a minimum of 100 different IOTA groups.

IOTA award is a fast growing award, where You can be an Hunter or a IOTA activator.

You can feel the emotion to be the PileUp master, without going to a rare DX site. If You live near the sea, surely there is an Island listed on IOTA Directory, where You could go.

There are many Island Maniacs worldwide, that expect Your DXpedition!

Every day there are many Islands active on the air, and You can partecipate into PileUp to increase your IOTA score.

** How to partecipate to IOTA program ?

To partecipate to IOTA program, you must obtain a IOTA Directory, that is a book with all detailed rules, complete list of world groups with relative reference numbers and checklist.

When you obtain a IOTA Directory, you receive a Directory number, (i.e. I-002 for Italy).
The Directory number is personal and permits You to obtain IOTA awards and endorsements.

After You have obtained the requested numbers of IOTA groups for the basic awards, You must submit QSLs to Your local IOTA Check Point and wait for the award certificate.

** Where to find information ?

You can find information about IOTA Island activity, in magazines, Packet Clusters, BBSes and now in Internet, reading messages, reports and bulletins (like Island News Bulletin, edited by IK1TZO and posted on rec.radio.amateur.misc Usenet Newsgroup.

If You have an Internet access You can receive a copy of Island News Bulletin (INB) via e-mail, sending a message to IK1TZO@inrete.alpcom.it with the word "subscribe" into message.

If You have questions about IOTA not covered in this FAQ file, please refer to Your local Check Point or Country Assistant, or send an e-mail to me: IK1TZO@inrete.alpcom.it

---
** How to obtain IOTA Directory ?

Following points are the only authorised from IOTA Committee to distribute IOTA Directory:

Italy : (Italian paper version, Italian/English software version for EasyLog 4)
Microware Software
c/o Piero Pirrone, IK1TZO
Via V. Veneto 80
I-14019 Villanova d'Asti - Italy
(Cost: L. 15.000 or 10 US $)

North America only:
Dewitt L. Jones, W4BAA
P.O. Box 379, Glen Arbor, MI 49636 - USA
(Cost: 10 US $)

French: Les Nouvelles DX (LNDX)
c/o Jean Michel Duthilleul, F6AJA
515 Rue du Petit Hem,
F-59870 Bouvignies - France
(Cost: 45 FF)

German: Hans Georg Goebel, DK1RV
Postfach, 1114, D-57235 Netphen, Germany
(Cost: 15 DM)

German Braille:
IRF Gelsenkirchen, Postgiroamt Dortmund 203820-462
BLZ 44010046, Germany
(Cost: 25 DM for Braille version/talking cassette -
quote order No.X25)

Polish: Rafal Krawiec, SP6TPM
P.O. Box 22,
PL-48100 Glubczyce - Poland
(Cost: 80.000 Zl)

Portuguese:
Luis Sutil Teixeira, CT4NH
Rua Visconde Moreira de Rey 1,
Carnaxide P-2795 Linda-a Velha - Portugal
(Cost: 1.200 Esc, in Portugal, 12 US $ elsewhere)

Russian:
Victor Russinov, UT8LL
P.O. Box 44, 310052 Kharkov
Ukraine
(Cost: 6 IRCs in Ukraine, 8 IRC Russia & other CIS countries,
12 IRCs elsewhere)

Spanish:
URE-Programa IOTA
Apartado Postal 220
E-28080 Madrid - Spain
(Cost: 1.200 Ptas in Spain, 1.500 Ptas elsewhere)

Remember:
No part of IOTA Directory can be translated, reproduced in any form,
except by written permission of the author (G3KMA - Roger Balister, RSGB
IOTA Director).

It is forbidden:
* distribution for sale or otherwise of the Directory, including the list
of islands, in English or any foreign language,
* copying of any part of the Directory for distribution,
* transmission of data from the Directory over networks
* use of data from the Directory in any computer product, including DX
logging systems, for distribution.

** Who is my authorised Checkpoint ?

Check Point IOTA, are Hams, authorised from IOTA Committee to validate Your
QSL cards.

They are:

UK, Ireland, Philip Marsh, G4WFZ, 28 Orcheston Road,
Portugal, Spain Charminster, Bournemouth, Dorset BH8 8SR, England

Benelux, Denmark,
France, Germany Brian Adams, G4RFV, 38 Waterloo Road, Poole,

Africa, Asia, Central
and South America Ray Small, G3ALI, 13 Rydal Close, Stowmarket,
Suffolk IP14 1QX, England

** DXCC Countries Islands are valid IOTA references ?

The Countries Islands count separately. An island shared by two or more DXCC
countries count as a single credit.

Largest islands with a size of more than 25,000 square miles count
separately.

** What are the IOTA frequencies ?

The main frequency is 14.260 MHz.

SSB frequencies are:
3.755 MHz 7.055 MHz 18.128 MHz 21.260 MHz
24.950 MHz

CW frequencies are:
3.530 MHz 10.115 MHz 14.040 MHz 18.098 MHz
21.040 MHz 24.920 MHz 28.040 MHz

40m:
It is recommended that operations should include a frequency above 7.025
when the band is open to North America.

14.260 is the frequency used from nets around the world for information
when band is open to North America.

We encourage diffusion of this FAQ on every networks, like Clusters, BBSes,
Internet FTP, and others media.

Island News, is edited by IK1TZO (Island Hunter and activator).
This bulletin born in Italian IOTA and islands environment. I'm member of
Diamond DX Club, and distributor and amministrator of Italian IOTA Directory
(on paper and software for EasyLog).

For this reason I'm in contact with Italian IOTA Check Point (IK1GPG),
G3KMA Roger Balister (RSGB IOTA Director), I8IYW Peppino (active DXer and
IOTA hunter), I1HYW Gianni (famous IOTA hunter), EA5KB Pepe, I1JQJ member
of IOTA Committee etc, and with main world DXpeditions.

I've dialy contacts with most active IOTA and DXer fellows, in Italy,
and Europe, if you have some questions about operations please contact us,
we try to help you.

If you have some questions about IOTA, rules, you can send a message to me.
If you have info about new operations, please send a message, I include them
on next bulletin.

Suggestions, comments, informations are welcome.

NOTE:
This bulletin can be freely distributed in BBS, PacketCluster in any
form, I encourage distribution.

-

2268. HAM RADIO CDS

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-03 00:00:00 UTC
From: William=E.=Newkirk%Pubs%GenAv.Mlb@rodes.cca.rockwell.COM
Message-ID: <199505031850.LAA28605@mail.ucsd.edu>
Source record: 247428

From: raiar@vulcan.inlink.com (Gary V. Deutschmann Sr.) who had a real axe to grind...

>Those who use CDs are in the long run cutting their own throat!

only because someone will eventually think of something better.

>In the early days of home computers, you had to load individual programs
>via a cassette tape or evern paper tape. Finally disk drives became
>popular, but you still had to change disks for each program and program
>interaction was at best, a laborsome task.

cost. who could afford a 50 Mb drive when they used 14" platters and needed regular servicing (filters, disk/head cleaning, etc.)

>With the advent of the affordable hard-drive, one could have numerous
>programs, all interactive, at a keypress.

i have programs that exceed the capacity of those early hard drives...(heck there are removeable disks that are 20x+ the size of those drives.)

>Why on earth, would one want to revert back to the old days of constant
>disk swapping and non-interactive programs is beside me.

i dunno -- CD's are generally used for 2 things- program distribution (install to local mass storage) and data distribution (you have a 600 Mb data base and your program reads that data -- since so much fits on a platter, 1 disk holds quite a bunch and the problem can be figuring out what to pull off of it...)

i don't understand how this means disk swapping and non-interactiveness.

>Just because a CD holds more data than Fort Knox, doesn't make it a viable
>alternative to a larger hard-drive.

properly done, we could return to the days when you could install software on the system disk and then write lock it to prevent accidents (like viruses). again this doesn't require "swapping" or loss of multitasking or interactive use of the drive.

>In fact, many old hackers will remember the locked disks, using spiralling
>and other techniques to keep them from being copied. Most of the CDs I
>have seen, baring a few, required that the CD be in the drive the entire
>time you were using it. You could not copy most of the programs to yor
>Hard-Drive because the program accessed a certain place on the CD.

get a disk changer or daisy chain some more drives onto your scsi bus if you've got a bunch of stuff like that (next it'll be that all the drives want

the disk to be "e" or something else "assumed".) We've got a couple of CD jukeboxes here (and i think another box that's a jukebox for MO disks but it's not at this plant site) up and running with dozens of users pounding 'em...

>CDs are nothing more than antoher disk locking scheme and many are falling >far it. Most CDs are not reverse compatable, so when you upgrade your >system, your CDs can hit the trash.

this doesn't make sense. CD's should be being made to standards like ISO 9660. Obviously if you have something specific for a Sun or a Mac or OS/2 HPFS or windows NT or etc., you could have a problem when you change from one operating system to another, but that doesn't happen all that often and even then, it's usually possible to see data on the disk - just not able to do anything with it...my new improved computer sure doesn't have any problem with old cd's and neither does my audio players -- i can play disks from the dawn of CD time when i had a Sony CDP-101.

if you move from something like DOS/windows or OS/2 to Linux or Solaris 86 or PowerMac or whatever, yeah, it might be a bit much to assume that executables will still work. data should be readable tho.

>As far as copyright protection, I personally would not buy any program >that I have not thoroughly tested, or given a return policy on.

(this is really funny...reasons to follow...)

>Yes I have used much pirated software, but, unlike the manufacturers >claim, it was to their benefit. If I liked the program, I purchased a >legal copy, along with all the books and product support that comes with >same. If I didn't like a program, it was erased from my drive and the copy >was tossed in the trash, where it belonged...And I was not out the money >for trying it...

Ha. So your ethical - what's this got to do with anything?

>I got sick and tired of paying for shitty programs that don't work >properly. And companies that know that their products have serious bugs >but don't fix them. I'm not afraid to name companies either, like Intuit, >who don't give a damn that their products have serious buugs. And they >don't even know how to fix them. Otherwise, subsequent issues would have >them removed.....

They want to merge with Microsoft...sounds like maybe they should. Microsoft isn't known for caring much about code size or working with customers to resolve bugs. (BTW - they probably know how to fix them, they don't know how to get you to pay them for a fix). Kinda sounds like Intuit and MS might be a match made in heaven...that way you can get your 1997 tax software in 1999 just in time to be audited.

(you didn't actually let a piece of software tell you how to fill out your tax forms did you?)

>My hats off to AutoDesk, they not only listen, they make the fix and send
>you a FREE update. Good going guys....

Autodesk used to use dongles and still uses them on exported products last i checked. Autodesk used to beat up 3rd parties by just incorporating their features into their products at the next revision (the job has gotten away from having to work with Autocad much - i know we upgraded to R13 but i don't have to use it day to day anymore...). Autodesk windows software at the r11 stage was less than great...

>Gary

maybe you should consider os/2. comes on a CD rom so you don't have to do swapping of a bunch of floppies while installing it. would let you do other things while your rom application is chunking away on the CD.

c/o Wireless Telecommunications Bureau
Mr Dave Furth via FAX to (202) 634-7651
by arrangment with Congressman Smith (R-NJ)

COMMENTS ON FCC RM-8626

I would like to present for the record the following opinions in opposition of the subject proposal, RM-8626.

This rulemaking proposal seeks to effect remedies in the amateur radio operations of informational bulletins by eliminating them in their entirety on the HF bands. This is far in excess of the needed remedies and would create a loss of training methods of morse code practise and information dissemination to third world amatuer stations of modest means that have been in place for the past 40 years.

The major problem in this matter stems from the fact that the FCC Part 97 regulations governing amateur radio are deliberately of a vague nature so as to leave room for flexiblity. This has lead to some attempts to seek as much personal interpretation as can be assumed to foster personal goals.

The FCC needs to better define the meanings og some of its terms rather than seek to change its regulations.

Some specfics leading to the current problems that RM-8626 seeks to correct are.

Informational -vs- opinion as a content of these Bulletin transmissions. Currently there is a tremendous increase in Bulletin broadcasting time for the purpose of opinionated comments by the originators. This fact alone has created the false impression that as long as the subject matter can apply to amateur radio than unlimited use of the amateur spectrum is allowed. The original intention as I unserstand Part 97 is to allow for brief information items of direct

interest to amateur operations that would best be served by immediate notification. Opinion dissemination could and definitely should be held for normal means of dissemination as newsletters or magazines.

Frequency selection by Bulletin broadcasters next becomes the secondary most important factor in this dispute. It has been widely discussed that the filing of this proposal lies in the current argument over the use of 3975 KHZ by K1MAN as a bulletin frequency. It should be obvious to everyone that there has always been a selection of frequencies for regular schedules and nets on 100, 50, 25 and 10 KHZ spaced frequencies ever since amateurs sought to contact a friend for a 2nd conversation. The attempt to acquire one of what is considered a "premium frequency" for sole intent of establishing a broadcast channel which should be reserved for these broadcasts goes against all established amateur radio accepted procedures generated over years of personal agreements between amateurs. Certainly one-way braodcasts should not take any claim over established 2-way use as the 2-way use is the intended use of amateur radio and any use of frequencies for information broadcasting can only be said to be tolerated under the rules for the benefit it may serve the amatuer public. A consideration in the area might be to limit bulletin transmissions to the upper 10 KHZ of each sub-band for the type of transmission.

Length of Broadcast is also of concern. It has always been the expectation of amateurs that these Bulletin would be a brief informational matter. Past experiences with the ARRL Bulletins transmitted by W1AW show them to be 15 minutes in length but that slower CW or multiple digital modes may take slightly longer. The broadcasts of K1MAN have become a troublesome matter because there are times where literally "hours" of continuous broadcasting takes place. Using the voice format of Bulletins, the Newsline Bulletins have been an excellent example of just how much information can be placed into a 15 - 20 minute well laid out format. Should HF bulletin broadcasting be allowed to remain, the FCC will have to determine a maximum length of time for each series of bulletin transmissions and how often they may be placed on the air. A further aid would be for a Bulletin Station to be required to submit for prior FCC approval a schedule of its bulletins before being able to transmit them. Adding a Bulletin class of station similar to repeaters would not be out of the question.

Looking further into the definition of the term "broadcast" leaves me with concerns over the type of presentations on the air presently. In my opinion, the current voice type of bulletins are attempts by amateurs associated with the news

broadcasting industry to bring their talents to our amateur

radio frequencies in an improper manner. I don't believe that the "remote correspondent" technique as a technique of public broadcasting was ever supposed to be a feature of amateur bulletin transmissions. I interpret Part 97 in this matter that these stations are in violation of sending a 3RD Party message without logging or delivery to another station. A report received from and attributed to another individual other than the sender of the bulletin has been made and in the cases where the recorded audio is of an amateur radio opertor who so identifies himself as such is probably to be considered a retransmission of 3RD Party Traffic. It does not have to originated over the radio waves, but merely be the words of a person other than the Control Operator of the bulletin. Most amateur messages are originated in person or writing. The direct voice relay of these messages is merely a use of modern technology.

In review, I believe the FCC has the powers within Part 97 to regulate these station effectively, but has been hampered by the offending amateurs use of legal tactic to stall FCC actions or merely ignore instructions.

While I and most amateurs have long heard the reports that the FCC is underfunded and that policing of our bands is up to us, it does absolutely no good for us to really bother if when problems are brought to the FCC there is no reaction to complaints.

The ARRL has just writen a public message calling the FCC's Field Operations and Enforcement actions "dismal."

I sent complaints to the the New York City E.I.C. never to be answered only to 6 months later complain to President Clinton and only 8 months after that did I get a letter from the E.I.C. that showed he never ready any of the 10 or more letters of complaint sent to his office.

The process of this rule making request in RM-8626 is not because there aren't rules to govern this subject, but that truely there are no teeth in the FCC's bite and now even some aren't scared of its bark either.

Never in all my 33 years as an amateur would I ever tread near the violations being displayed so openly in public by any of the individuals causing this conflict.

Respectfully submitted,

Robert Reed, WB2DIN

I'm interested in exchanging notes with anyone working on (and hopefully solved!) ignition noise problems with the Jeep Cherokee line (the older ones, not the Grand Cherokees), made from about 1984 thru current.

I've been in contact with a number of people driving this vehicle - it's gotta be the noisiest electrical critter ever to run on 4 wheels!

Thanks & 73 de WB5KXH

QST

Greetings,
I am looking for information regarding the TEMPO S1 Ht. I purchased such from another HAM perhaps a year ago. It is a synthised HT on 2M and was re-configured (battery-pack ONLY) with a Gel-Cell 9.6V 2.0MaH battery.

The rig worked Excellently for a while; the Gel-Cell bit the dust. Since no Manual came with the rig and I have no further info as to what is EXACTLY EXPECTED for voltage/MaH requirements, can someone/anyone that has any knowledge SUGGEST what I might need to reconfigure a USEABLE pack to continue the operation of this rig?

Additionally, I would prefer to construct something that would allow me to use it MOBILE...so if I knew SPECIFICALLY the Voltage/Ampherage requirements I COULD construct something that would be useful...

Thank-you to all for your informations! :)

2272. Field Day '95

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-04 00:00:00 UTC
From: walter.schlifer@doghouse.com
Message-ID: <307.25.476@doghouse.com>
Source record: 247032

Out of my own personal curiosity,
How many HAMS in this Net participate in Field Day?

Although I have been a HAM for only 4 years, I still find Field Day to be
one of the BEST times of the year; because of the organizational aspects:
drawing OM and young alike together for ADVENTURE...

The teaching and comradiry (sp?), the inquiry from the public at-large;
the "new" ways of generating power; the contacts with other stations;
camping and struggling to get the towers in the air, the wires tree-to-tree,
the equipment trued to frequency; the food done JUST RIGHT to please the XYL's;

THESE MOMENTS, are the BEST!

HAMS, lend me YOUR Stories! I am compiling a SCRAPBOOK of FIELD DAY experiences
that I want to save for my children/grandchildren.
Even if I am not personally in the stories, I WANT to hear/read of them! Send
me your stories, I am saving them on-file for times (future)!

Please explain in your own words what was done and the persons (fellows,
complete WITH CALLSIGN) of the activities of the EVENT!
THX! 73's

ARLD022 DX news

ZCZC AE97
QST de W1AW
DX Bulletin 22 ARLD022
From ARRL Headquarters
Newington CT May 4, 1995
To all radio amateurs

SB DX ARL ARLD022
ARLD022 DX news

This week's bulletin was made possible with information provided by Bob, WB2CJL, Bob, AA1M, Joe, NJ1Q, Chod, VP2ML, The DX Bulletin, Bob, WB2YQH, and Contest Corral from QST magazine. Thanks to all.

CRETE, SV9. HA0HW, HA0ET and HA0DU will be operating SV9/ from May 9 to 16. Bands to be used are 160 through 10 meters, and modes will be CW, SSB and RTTY. QSL all three via HA0HW.

COMOROS, D6. IK2GNW will be active for one week, including a stint in the International ARI DX Contest May 6 and 7. He should be operating before and after the contest period. Plans call for activity on 160, 80 and 40 meters, and the WARC bands. QSL via home call.

MADEIRA ISLANDS, CT3. DL5MAE and DL6RAI plan to be up and running with a multi-mode DXpedition May 5 to 29. Hopes are to be on 160 through 2 meters and operate CW, SSB, RTTY, satellites, PacTOR EME and meteor scatter. Listen for their CW 33 kHz up from the band edges. They will use a yet to be released special call sign for the CQ WW WPX Contest May 27 and 28.

KERMADEC, ZL8. Barry, G4MFW, will be operating from here May 5 to 15. He plans to transmit on 3798, 7080, 14195, 14260 and 21295 kHz, QSX up. QSL via KA1JC.

RWANDA, 9X. Mark, ON4WW, will be active until the end of June. Check 3513 kHz at 2015z and 1827 kHz at 0030z, listening up. QSL via ON5NT.

QSL NOTES. Bob, AA1M, reports that US5MV is the QSL Manager for JW0E. All direct QSL requests should include one IRC and a SASE. The Radio Club of Venezuela will start processing QSL requests for the July 1994 YW0RCV DXpedition on May 15. The RCV Board of

Directors apologize for the delay and appreciate your patience.

NEW DX NEWSLETTER. Bob, WB2YQH, introduced The 59(9) DX Report at the Dayton Hamvention last weekend.

THIS WEEKEND ON THE RADIO. The Connecticut QSO Party, sponsored by the Candlewood ARA, is a phone and CW event that runs from 2000z May 6 to 2000z May 7, with a rest period from 0400 to 1200z. Exchange report and ARRL section, province or DXCC country. Connecticut stations will send report and county. W1AW will be on the air in the contest from 1400 to 2000z May 6. Work your HQ station for bonus points.

The Massachusetts QSO Party, sponsored by the Framingham ARA, runs from 1800z May 6 to 0400z May 7, and 1100 to 2100z May 7. Exchange signal report and state, province or DXCC country. Massachusetts stations will send signal report and county.

The Danish SSTV Contest, sponsored by the Danish SSTV Group, is from 0000z May 6 to 2400z May 7.

And the MARAC County Hunters CW Contest, sponsored by the Mobile Amateur Radio Awards Club, runs from 0000z May 6 to 2400z May 7. Exchange serial number, station catagory (either home or mobile), signal report, county, state, or province or DXCC country.

For more information on these events, check page 111 in April QST.

> included on this QRZ disk. It was nice to see my program there.
>
>

If you do write the Amiga program, I'll be more than happy to include
it too, on the next disc. I'm looking for all sorts of executables, and
so far we've got MS-DOS, Windows, NeXT, SGI, HP, Linux, OS/2, Sun
and AIX on the way. We still need a Macintosh app really bad.

It'll be worth a free CD for you if you do it, to help offset the price
difference you suffered in Dayton :-)

Whoa Al....

I changed the format of the index header, not the general database,
to make the system heterogeneous between computer systems. That's
why today, QRZ works on more types of systems than any other disc.
The change, which I hid from nobody, was two discs back. I make
a big effort to make sure that compatibility is not broken. Since
that one event, there has not been a format change.

My discs contain a complete technical description of the database
files, the index files and the header layouts. Does Buckmaster
do this? Do they also include sample source code and a documented,
DLL API library of pre-compiled search and formatting routines for
developers to code to?

I'm a programmer by profession, and I know the difference between
an OPEN system versus a closed, much less encrypted system like
Buckmaster.

> SAM on the other hand, has made changes continually to their
> database, but insulated customers and software developers by using a well

> database to logging software. Supposedly Buckmaster is going
> to this API approach also - now if only the others would wake
> up and use this approach.

Have a look at the disc Al, QRZ has had the (documented) API in
the last two versions.

2278. Digital QSL's at QRZ.COM

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-04 00:00:00 UTC
From: Fred Lloyd <flloyd@qrz>
Message-ID: <NEWTNews.799651730.22429.flloyd@pcbq.qrz.com>
Source record: 247038

We've been updating a few things around QRZ.COM lately (but not the database format :-) and I'm happy to announce that we now have a collection of on-line digital QSL cards in .GIF format.

If you have a Netscape browser, you can start looking immediately by connecting to: file://ftp.qrz.com/files/ham_gifs

If you'd like to have your .gif posted as well, just drop it off in the /tmp directory, or send me your card in the mail. We've got plenty of space!

In addition, the FCC database is now very up-to-date and we've also added Austria and Cuba to our collection. Check it out on:

True, but how does this justify requiring one to know code before being permitted to use the HF bands? The fact that one particular method of communicating is better than the rest under marginal conditions does not mean that it is the only method that is usable. In fact, under good conditions, morse is inferior to both voice and packet for message handling!

>
> CW is an elegantly simple mode. One can communicate with the least
> expensive and unsophisticated of equipment.
>

Also true, and also irrelevant. The simplicity and low price of CW equipment makes it a very attractive choice for those on a budget, or those wishing to build their own equipment, but it is no justification for forcing everyone to learn to use a mode that many will never use.

> Also the whole cw argument is largely a red herring foisted by those
> who have entered amateur radio at a time when requirements have been

This I disagree with.

> drastically lowered. Exams that have pre-published answers that smart
> seven years olds can memorize. (see QST seven year old gets her extra)
>

This I think we agree on. The exam I had was pitiful at best. I'd like to see the testing include a lot more questions on operating procedure, rules and regulations, and station troubleshooting. Additional technical material would be nice too, but should only be a requirement for those wanting to build transmitters.

>
> IF you want to get on HF do the time. Learn the code. Stop belly-aching.

Dave,

I just bought a Hot Rod today - the gain over a HTX-202 stock antenna definately exceeded my expectations! I was able to hit a repeater in Tempe from Phoenix on LOW power using this antenna when I was unable to hit the same repeater using HIGH power + stock ant!!!

The $20 at HRO sure beats the heck out of $32-$70 for a higher power battery pack.

I have some questions about the AEA HR-1:

- Can I use this antenna with a IC24AT dual band rig, or is it optimised for 2m only?

- When extending the antenna to a length shorter than the full length, would it be better to extend the top section to its full length first or extend it from the bottom up?

- What kind of performance-related nuggets-o-wisdom can you impart about your experience using the antenna?

Thanks,

- Mark

>features, but take your time and you will learn more about your
>radio.
>

It's a HORRIBLE manual. I have hated it from ther first time I read it and every time I re-read it I hate it more. It is written in good English and tells you what happens when you press each button, BUT IT NEVER TELLS YOU WHY YOU WOULD WANT TO. Just one example. It tells you that you can store page calling codes and then it tells you that you can block them?!? What it doesnn't even hint at is that this is what you need to do if you want to set up a group of of people with individual page codes and maybe a group page code. Without the blocking *everybody* will be paged (as a "group" call) whenever *anybody* is paged. There are many other examples.

What they need to do is write some examples of use; typical configurations and explanations. I am sure Kenwood can do better than this. There are plenty of good and bad examples in the marketplace.

I have found out how to operate my TH22AT (which I think is a great little HT) by trial and experimentation. It should not be necessary to do it this way.

This is not intended to be any kind of attack on Andrew Miller and his good advice. I just needed to get this off my chest.

Source record: 247183

Position: RADIO FREQUENCY (RF) ENGINEER
Location: Eastside, Seattle Suburb
Reports to: VP - Engineering
Company: International Cellular Operator

Responsible for the RF Engineering of a new nation-wide wireless data communication system.

PRIMARY RESPONSIBILITY:
Provide requirements for sites.
Develop and implement frequency plans.
Assist in coordinating the installation of the system.
Work with Strategic Technology Development department through dsing phase and translate RF design to implementation.
Provide guidelines and plans for integration and testing of the system.
Extensive travel, up to 50% required.
Additional funcitons may include project supervision for one way messaging projects.

QUALIFICATIONS:
BS degree in Electrical Engineering or equivalent required. MS degree preferred.
Good understanding of radio wave propagation, antennas, and statistics required.
Knowledge of engineering cost study analysis and project management preferred.
Previous experience in Cellular RF engineering preferred.
Data networking experience helpful.
Excellent computer skills - should be able to work on DOS and UNIX. platforms.
Should be able to present technical issues clearly.
Strong organizational and interpersonal skills.
Receive general, concept level instructions and develop, implement and accomplish goals with minimum supervision.

RECRUITER: Kossuth & Associates is a retained, search firm, which specializes in recruiting for MIS, Networking, Software Development, Telephony, Radio Frequency, Testing, and Product Management professionals for the software and wireless industries. Located in Bellevue, Wash., the firm has clients and active search engagements throughout North America.

All resumes accepted in confidence. We will be pleased to file your resume for future consideration. Please include cover letter. EOE Candidates must have the right to work in the U.S. Should be a permanent resident, have a green card or be a Canadian citizen. If qualified, please contact:

You got a good deal. These were spark gap keys used in the early days of radio; mine had mica insulation underneath. There were many models, some with very large contacts for high level keying. Check out the book "Keys, Keys, Keys"; your key is pictured there.

Source record: 247185

Allright, I just have to add my two cents...
Just give it up, there are many rights of passage (trust me, the training in my field is full of them)...and code is just one of them! Like the rites of passage in many other hobbies, education and professions, there is an element of technical, historical, and contextual importance. We can argue over the validity, but it seems to me that there is way too much belly-aching over the code. JUST DO IT. It may not be easy at first, but there is a tremendously wonderful incentive...advancing one's license class and spectrum privileges! It is a good filter, as well. If one does not care to advance one's knowledge, technical prowess, and responsibility within a specific context (Amateur Radio, in this case) then there should be restriction so chaos does not result. Similarly, with increased knowledge comes an awareness of vernacular...the language communicates more efficiently the ideas and notions as a result. It is even a social utility which helps us identify others with similar knowledge bases...The key is to become a good teacher as well, to help others advance their state...building bridges as one goes, instead of burning them.

If the code requirement was to be lifted or lightened, then the written portion of the examination process could compensate with increased difficulty (better stated as a more thorough test of knowledge base). IMHO, the code should stay and the written exams made more difficult anyway! It is so simple to purchase a good book like Gordon West or the AMECO series, sit down, and MEMORIZE the answers....this is not ideal, a functional understanding of concepts would be better for all...but it can be accomplished in a reasonable amount of time. This is what I suggest to newcomers, oldcomers, and newly-returned oldcomers.

Keep in mind, there should be exceptions or special assistance for those that are physically or perceptually challenged.

All in all, this is part of the "spirit" of good Amateur practice...it fosters technical and inter-personal skills, locally and globally!
Personal study can be fun AND rewarding...there just is not always a quick fix for those not willing to spend the time in their own education.
(Albeit, some might argue my opinions might be screwed...strike that...skewed by the late nights and re-programming of my own cerebral cortex by the educational powers that be that I have encounterd in my lifetime [:-))

73 and best wishes to all,

```
WW> You know, in all that time, I can't remember *ever* pulling a bad
WW> Japanese transistor out of stock. I think there's more to the
WW> problem you experienced than meets the eye.

I took my own VOM to the distributor's store and ran the
back-to-back diode test on them. Two showed diode OK
only for the base-collector and open on the base-emitter.
The third one finally met the test. That last one is
happily running in my Kenwood TS-830 now. (Why did the
original pass transistor fail? I accidentally connected
230 v AC to the 115 v line!!!! Amazingly, the failure
of that pass transistor saved the rest of the radio.
The failure mode was base-emitter open).

Each transistor I tested was packaged in a plastic envelope
and all I did was poke the three leads of the TO-220 pkg.
through the plastic without taking the transistor out of the
package.

These are bipolar high current pass transistors; I don't
think they were affected by electrostatics.

I have a couple good repeater books describing the frequencies, call signs, city, etc. of 2m and 440 repeaters in the south bay, but one thing is lacking: where specifically are they located? San Jose, for example, is HUGE. Just saying that a repeater is in San Jose is not enough. Does anyone know of a source that shows/describes where (specifically) the repeaters are? Example: I know that the 147.390 repeater (W6PIY) is on top of Good Samaritan Hospital in Campbell.

[Late - I've been busy. Also, no President's report due to Fed AGM]

Stolen equipment

Repeater stolen

We were advised in last week's callbacks that the Mt. Ginini VK1RGI 2 metre repeater, along with packet systems, a CB repeater and other commercial systems were stolen from the Mt. Ginini site on Easter Saturday.

The 70 cm Mt. Ginini repeater was not at the site at the time of the robbery, having been removed previously for workshop repairs.

Any information about this crime should be conveyed to the VK1 Division or your local police.

The only thing left in the repeater hut was apparently the light globe.

Nominations for Council

Divisional news

Nomination forms for the 1995 Council are included as an insert in the May Amateur Radio magazine issue.

Country candidates are advised that the "rumour" currently circulating that travelling expenses of successful candidates will be fully paid by the NSW Division is completely false.

ATUG

Telecommunications exhibition

This week, the 12th ATUG telecommunications and data networking exhibition is to be held - Tuesday 2nd to Thursday 4th May - at Darling Harbour.

An opportunity for amateurs to see where the industry is at in relation to their own level of experiments, perhaps?

RF technician wanted

RF technician wanted

The Wireless Institute requires an RF technician to repair RF amplifiers, transmitters, and RF loads in the range of 1 MHz to 1.5 GHz. Must be handy with soldering iron.

Peter Kloppenburg
WIA head office in Parramatta
phone 689-2417

[This is NOT for the Dural station - DH]

Dural report

Dural Report

The VK2 Divisional broadcast station, VK2WI Dural, now sports a 10m FM outlet, on 29.120 MHz. This band and mode is expected to be made available to Limited licencees "real soon now", and as usual the VK2 Division has taken the lead in providing an incentive to use this important but under-utilised mode; as the old saying goes: "Use it or lose it" -- somebody has to help keep those foreign taxi drivers at bay. We thank Peter VK2EMU for providing the equipment to make this possible. In the meantime, we have heard reports that our 10m FM signal is not the best, which is undoubtedly due to the temporary antenna and the mere 10 watts output; if our listeners would like to have the signal improved then a "real" 10m vertical antenna would not go astray, along with a 10m amplifier. Remember, Dural is YOUR station.

With the completion of the afore-mentioned 10m FM service in hand, the old 2m SSB outlet will soon be resurrected. If members want the old 6m SSB transmission to return to air, then a suitable transceiver, crystal-locked and capable of at least 10 watts is required; does anyone have such a beast?

Finally, the "on again and off again" 6m repeater at Dural has been given a boost with the generous donation of equipment from Mike VK2PFQ; hopefully this long-awaited repeater will soon see the light of day.

VK2 WICEN news

WICEN News

Those members who have not yet renewed must do so by 30th June, if they wish to remain a member. For just $10 (plus a joining fee where necessary) you can be a member of the only Amateur Radio organisation accredited to take part in disaster situations.

Next Sunday is the Hawkesbury Bridge to Bridge Speedboat Race, for which David VK2KLX is looking for volunteers. Packet radio as well as voice will be used for this event, and it is an interesting exercise in operating a packet radio station from a boat anchored in the middle of a river; as the boat swings around with the tide, it tends to move in and out of null spots... All operators are required to be in position by 0800, and stand-down time iS approximately 1300. Some people have volunteered, but more are required, so if you are interested in seeing some very

fast and very LOUD speed-boats going full-bore then please contact the Event Commander, David Ramsay VK2KLX, after hours on (02) 476-1048, or via fax on (02) 477-7393 any time, or on packet radio as VK2KLX at VK2AAB.

The annual Goulburn Training Seminar is on the weekend of 13-14th May (for which applications have now closed), along with the Rathmines Fun Run co-ordinated by Steve VK2KBL; the Wyong Car Rally is on the weekend of 20th-21st May, co-ordinated by David VK2UDT and Andy VK2XRX, and there will be further details in next week's broadcast; and the Variety Club of Australia Newcastle Bash is on 23rd-26th May, with Maurie VK2CD in charge. Finally, the closing date for the Annual Reports is 31st May. WICEN Members who are also members of the WIA (and if not, you ought to be) may be interested to know that following a hearing by the Federal Court, their Annual General Meeting will be at Doonside on 1st July.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

News briefs

NEWS BRIEFS

A few weeks ago, we reported that telephone exchange numbers in the UK were changing to allow for an increase in the total number of phone subscribers. Closer to home, Australian telephone numbers are changing as well. Already, subscribers in the Sydney suburb of Mona Vale have had their numbers prefixed by "9"; other Sydney numbers beginning with "9" will get an extra "9" from July this year, with other Sydney numbers changing in July 1996. Melbourne numbers change from May, with those on the Gold Coast changing in June, and Brisbane in July.

The increase in the telephone number "address space" should allow us to take advantage of a number of new services such as personal paging, and having two numbers with different ringing tones on the same line.

****

ATUG 95, the Australian Telecommunications Users Group Conference and Exhibition is taking place at Darling Harbour from Monday through Thursday this week. More than 120 speakers will present

papers on all aspects of telecommunications. For information about the conference, phone (02) 906-1088, or 1-800-269-979 toll free.

****

News Briefs gathers communications and technology news from Australian media and other sources worldwide. Thanks this week go to The Sydney Morning Herald. If you have an interesting news item, please send it to the Divisional Office.

FCC approves auto digital stations

FCC APPROVES AUTO DIGITAL STATIONS

The FCC will amend its rules to permit limited automatic control of digital stations on the amateur HF bands. The automatically controlled station must either be connected to another station under manual control, or must transmit within a subband designated for this purpose. Those subbands, however, have not yet been announced.

The Commission said it believes these rule changes will allow amateurs to "contribute to communication technology" and to advance amateurs' communication and technical skills.

More information can be found on page 71 of the August 1994 issue of QST.

-- from ARRL Bulletin no. 45, sent to us by Peter Vernon VK2JPJ

PGP and packet radio

PGP and Packet Radio

Do you use packet radio? Are you concerned about the forgeries that seem to abound on that medium? A recent relaxation in the regulations permits Amateurs to use encryption for authentication purpose (as long as the message itself is not obscured).

Are you interested in knowing more? Well-known Amateur and crypto-freak Dave Horsfall VK2KFU has been using PGP (standing for "Pretty Good Privacy") on packet radio for about a year now, following several cowardly attempts to forge messages in his name. Dave notes that since he has started using PGP to authenticate his messages, forgeries involving him have dropped from about one a week to about one a year.

Are you interested in knowing more? Dave has had articles published in several journals, explaining this "new fangled" PGP thing, and is always interested in spreading the word further afield. He is available for Club lectures, and will also supply the software, free of charge, including source code, for most operating systems (Unix, Macintosh, Amiga, and Atari) and also for MS-DOS, upon receipt of a floppy disk. Several introductory

articles have also been posted to the packet radio network, but Dave understands that at least one "Sysop" (no names) will block anything with the naughty word "PGP" in it (no, he doesn't live in NSW, but let's just say that the "P-word" has been added to the "naughty word filter" in the Land of the Long White Sheep).

Do you care about message authentication? You should. Do you care about message secrecy (hopefully not on the bands)? You should. Do you want to hear more? You should...

-- Dave VK2KFU, resident crypto-freak

GEOMAGNETIC: ACTIVE 28-30 APRIL DUE TO A CORONAL HOLE. THEN QUIET TO UNSETTLED UNTIL 3 MAY. ACTIVE-MINOR STORM LEVELS EXPECTED ON 4 MAY.

IONOSPHERIC: NEAR PREDICTED MONTHLY VALUES. HOWEVER, THE QUALITY OF HF COMMS IS EXPECTED TO BE DEGRADED DURING THE INTERVALS 28-30 APRIL AND 4-7 MAY.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Manly-Warringah

CLUB NEWS

Members of the MANLY-WARRINGAH RADIO SOCIETY, please note that the Society will soon conduct a communications exercise in conjunction with the North Side Riding Club.

The event will take place at St Ives Showground on Sunday, 14 May, starting about 12 noon. The Society will set up a radio net to provide safety communications and competitor times for the event organisers.

About a dozen operators will be required for this exercise so would members please contact the club if they are available on that day.

The Manly-Warringah Radio Society meets every Wednesday evening at the Warringah Volunteer Services Centre, Kamber Road,Terrey Hills, with a business meeting on the second Wednesday, and a lecture on the third Wednesday of the month. Doors open about 7:30pm, and visitors are always welcome.

If you need instructions how to get there, just call in on the Terrey Hills repeater, 146.875 MHz, or phone the club on 450-1746 for more information.

--Richard VK2SKY, Publicity Officer

Urunga convention report

Urunga Convention report

This is a brief report on the Urunga Radio Convention held on the Easter weekend, from the convention committee.

The convention began on time. The weather was overcast with a shower or two on Saturday, and clear and sunny on Sunday.

There was great interest in the trading tables and a large quantity of goods changed hands.

The WIA book collection was popular, again, thanks to Tim, VK2ZTM, and the WIA.

Peter Corkeron and the WICEN personnel captured the interest of the convention on Saturday evening with an informative lecture. They left country amateurs with some new ideas.

The results of the activities are as follows:-
The Urunga Scramble was won convincingly by Graeme, VK2ZI.
The Jack Gerard Memorial Trophy was won by that invincible fox hunter, Ken, VK2DGT.

The Technical Quiz and the General Quiz were won by Andy VK2AAK. The overall point score was taken out by Jeff, VK2BYY, who had a successful weekend.
Individual fox hunts were won by Jeff, VK2BYY, Ken, VK2DGT and Allan, VK2EFM. Chris, VK2YMW, was second in three events.

The XYLs in charge of refreshments, catering and hospitality were June, Marie and Robyn, who were awarded the gratitude of the convention and who scored well in the General Quiz.

The invincible foxes were Brian, VK2ZCQ, Merv, VK2DMS, and Ken, VK2DGT, with much appreciated assistance from Tim, VK2ZTM and Peter, VK2AGB.

The meticulous recording of the results of convention events and everything else was done by Arnold, VK2ADA, who indeed, had the most demanding task.

The convention committee cordially invites all radio amateurs to the next Urunga Radio Convention at easter, 1996, which will be held reagrdless of the weather or any other impediment.

Many thanks 73
Merv, VK2DMS

Club news: Mid Sth Coast

Mid South Coast Amateur Radio Club

Greetings from the members of the Mid South Coast Club! Our next quarterly social gathering and meeting is to be held at Hancock's "H Ranch", Little Forest Road Milton, on Saturday 6th May. To reach the ranch, turn off the Princes Highway 3km north of the historic village of Milton and follow the signs.

We look forward to a good attendance. The site is a spectacular one. Our southern hospitality is famous and we welcome visitors.

Arrivals are from 10.30 onward. Bring your family and your lunch. The club provides the tea, coffee, etc. and there will be a particularly interesting speaker.

From David VK2CX, Club Secretary

Club news: AATC

Australian Amateur television Club

The next meeting of the A.A.T.C. Inc be on the 3rd Sunday of this month - May 21st - and it is to be held at 10 Manus Place - Glenfield promptly at 1.00 pm. Note this is the week after Mothers Day.

Technical items prior to the meeting will be an mini talk of the new club power supply by VK2XOF and the video to TTL monitor -

that is using an old IBM mono monitor as a PAL/VHS video monitor - also the latest boards for the twisted pair television transmission over a twisted pair up to 1000'.

Anyone interested in ATV is welcome to attend for general information and the general technical information.

For more information about ATV - contact Bob the Publicity Officer on (02) 587-3491 between 4.00 pm and 10.00 pm Monday to Fridays.

Notice to all members: AGM countdown, weeks away, nominations please.

An IBM PCB CAD drawing day will be held soon - learn how to design a printed circuit board - you will need to bring an IBM and a portable colour tv. This will be open to any-one - location and time to be announced. For more information contact RCS Radio for invite.

AATC Inc. Publicity Officer Bob Barnes

Club news: Castle Hill

Castle Hill Amateur Radio Club

The next meeting of the Castle Hill Amateur Radio Club will be held on this coming Wednesday, the 3rd of May.

Our lecturers for the evening will be Harry Tyreman and Bob Johnson. Their topic will be "QRP" or low power transmission.

The discussion will include design and construction aspects, with examples of home built gear on display.

Learn about the world of 500 milliwatt linears and transmitters smaller than QSL cards.

The meeting commences at 8 pm and will be held at Castle Hill Miltary Radio Collection.

Visitors are welcome to attend.

For further details, contact Ian O'Toole, VK2ZIO on (02) 680 2112.

From Ian O'Toole, Publicity Officer

Club news: St George

From the St George Amateur Radio Society

The Annual General Meeting of the Society will be held at the usual venue, that is in the 1st Allawah Scout Hall, corner of Bellevue Pde, and Blakesley Rd., South Hurstville at 7.30 pm on Wednesday evening the 3rd of May, 1995.

All club members are earnestly requested to attend this very important function, where they will have the opportunity to thank the outgoing officers for their service to the Society during the year and also to show their confidence and high regard for the incoming office bearers by participating in their nomination and selection for the ensuing twelve months.

For those members unable to attend for whatever reason, the Executive Committee has authorised that they may cast their votes by proxy if so desired. These proxy votes must be in writing and in the hands of the person exercising the proxy at the time of the meeting and be available for inspection by the meeting chairman if required.

Visitors are always welcome to club meetings, coffee, tea and biscuits are provided and the members look forward to meeting those interested in attending.

from - Allan VK2XF Publicity Officer

Club news: Fisher's Ghost

Fisher's Ghost Amateur Radio Club

As seen at Wyong, Fisher's Ghost Amateur Radio CDlub have produced their own 4800 bit per second packet modem. What makes this modem different from others is that it works even running it Baycom style with NO TNC required.

The modem uses a single sided board and uses no exotic parts making it ideal for the home brew constructor. Many of these modems have been successfully built around the country.

Should you wish to see the 4800 modem or just visit the Fisher's Ghost Amateur Radio Club visit the club rooms at Campbelltown High School at 7.30 on the 2nd, 3rd or 4th Tuesdays of the month. At the high school look for the HF Yagi.

Further information can be obtained from Dave VK2GDM on 046 28 7540.

brought to you by Darryl VK2TDS, Packet Coordinator

Club news: Blue Mts

The Blue Mountains Amateur Radio Club is holding its Annual General Meeting on Friday the 5th of May 1995. We have no guest speaker as the most of the night will be taken up by the election of office bearers.

As always, visitors are welcome but only financial members can vote. The usual refreshments will be served.

The meeting commences at 8pm, at Springwood High School corner of Grose Road and Chapman Parade Faulconbridge.

Alex VK2ICL
Publicity Officer

Geepers, how long would it take to repair the damage caused by some
journalist convincing the public of that?

How long will it take Arab-American families to get over the verbal
and/or physical abuse they had to endure because of the frenzy of getting
the news out fast no matter how correct it may be?

Not to bring the OKC thread into this newsgroup but look at how many
times the stories changed shortly after the bombing.

I don't like Connie Chung anymore, I'm disgusted with Heraldo. When will
it end?

Jim, WK1V (listener to the Ham Radio & More Show)

I hope that this was just a post that was not stated as meant. If not,
it is completely preposterous. Any information concerning every aspect
of amateur radio is available to anyone bar none. I would not have to
have an amateur license, code or no code, to learn about HF propagation.
While having a codeless license might eliminate a good source of first
hand information, you can not honestly equate that being a no code
licensee would make the information unavailable.

Source record: 247206

Seems to me there's a crying need for low speed CW nets operating in the VHF and UHF bands, so that no-coders, or anyone who needs code practice, can learn in a "live fire" environment. There are a lot of fine CW operators out there, and a lot more people who'd love nothing better than to become good CW operators, but who need some place to develop their skills before jumping into the somewhat less than forgiving environment down in HF.

The simple fact of the matter is that you can listen to practice tapes till you're dead, but until you get on the air and actually use the durn stuff, you're never going to grasp CW operation. It's like trying to learn to swim without ever getting in the water - it doesn't work. And just as you don't fling new swimmers into the deep end of the pool all of a sudden, but start 'em out in shallow water, so people learning to work CW should be given "shallow water" where they can learn properly.

Y'all bounce it around your local clubs. I think it's an idea that would benefit everyone in the amateur service in the long run.

73,

Dan, KC4ZNW

>> So for $420 my wife and I had a cell phone for JUST
EMERGENCIES !! <<

This is not neccesary. Just for information: I took my old cell phone and gave it to my wife to keep in her car for emergencies (after I got my 2M HT). We do not have an account or phone number - yet she can turn it on and dial 911 - and she will be connected to emergency service.

It seems that 911 access from a cell phone does not need an active account to work - at least in California - due to an interesting law.

Well ya know, that's sort of like asking "Why operate CW?" I do because I
can. I joined because I could.

Don't get me wrong, I enjoy digital communications, but just try to send
and receive digital info. via moonbounce!... clearly as I see it, there is
no comparison to what CW can do in the weakest of weak conditions that are
normally associated with EME type of communications.
I'm sure digital comms via the moon would work with the much larger antenna
arrays, but for the most part, no comparison....73 de Todd KB6IGC sk

2316. GB2RS News 7th May 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-04 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>

Source record: 247212
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 7th of May and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

This Bank Holiday weekend, well over fifty British special event stations will be commemorating VE Day by using GR or GB prefixes. A list of these stations, as well as a number of stations in Europe commemorating the end of the Second World War, can be found on page 11 of the May edition of Radio Communication. In addition to those listed in RadCom, we are now aware of a number of other stations commemorating VE Day:

The Waterside Amateur Radio Society is operating a 'special event station with a difference' - from on board the restored steamship 'Shieldhall', cruising in the Solent. The station is using the callsign GX4JYN/MM on HF and 2 metres FM.

The Bromsgrove and District Amateur Radio Club is operating GR0VGG on all bands and modes from the Avoncroft Building Museum from 10.00 am to 6.00 pm until Monday the 8th of May. There is also a display of Second World War radio equipment at the museum.

GB2LL is operating from Langford Lodge, the Second World War US Air Force Base in Northern Ireland.

And the Chad Radio Club of Lichfield will be operating GR2FAF and GR8FAF on HF and VHF. They would like to contact any members of units who served at Fradley Air Field near Lichfield.

The RSGB is participating in the massive Hyde Park VE Day celebrations this weekend. The Society is sharing a stand with the Air Training Corps, and representatives of the RSGB will be available to answer questions about amateur radio from the general public. Over one million people are expected to attend the event over the course of the three days.

There will be a special event station and an exhibition of wartime equipment from all three services at the Puckpool Park Wireless Museum, Seaview, Ryde, on the Isle of Wight, on Monday the 8th of May. Further details may be obtained from Douglas Byrne, G3KPO, on 01983 567665.

And all Belgian stations may substitute the prefix OS in place of the usual ON for the whole of May, in celebration of the 50th anniversary of the end of the Second World War.

And now other news:

The 1995 AMSAT-UK Colloquium will take place between the 27th and 30th of July at the University of Surrey in Guildford. If you plan to attend, please send an SASE as soon as possible to AMSAT-UK, London, E12 5EQ, in order to request an application form.

Three specialised events take place next weekend:

The Midlands QRP Meeting will take place on Friday the 12th of May at 7.15 pm. It will include a lecture by well-known QRP enthusiast the Reverend George Dobbs, G3RJV. Tickets are available from G4AHK, whose address is correct in the current RSGB Call Book, or by telephoning 0121 445 3807, or from other members of the Bromsgrove club.

The York Cluster Support Group DX Convention will take place on Saturday the 13th of May at the Post House Hotel, Tadcaster Road, York. Speakers at the convention will include Alan Jubb, G3PMR; Roger Western, G3SXW; Ron Stone, GW3YDX; and Bob Harrison, G4UJS. For other members of the family, York Minster, the Jorvik {pronounced "Your-vick"} Viking Centre and the Railway Museum are a short distance away. For further information, contact Colin Thomas, G3PSM, 36 Chelwood Crescent, Leeds LS8 2AQ.

And the Martlesham Radio Society VHF Roundtable will take place on Sunday the 14th of May at the BT Laboratories, Martlesham Heath, Ipswich, from 10.00 am. Please note that due to BT Labs' security requirements, all admission will be by advance booking only - please give the names of people wishing to attend and send an SASE for tickets to G0RRC, whose address is correct in the latest RSGB Call Book.

The annual G5RP Award is designed to encourage newcomers to HF DXing. Unlike most DX awards, this one is given for making rapid progress in the recent past, which only relative newcomers have the scope to do. Nominations for 1994 to 1995 are needed now, so if you have someone in mind, contact Martin Atherton, G3ZAY, 41 Enniskillen Road, Cambridge CB4 1SQ or call him on 01223 424 714.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

Barry Fletcher, G4MFW, has secured permission to operate from the Kermadec Islands and should be active from Raoul Island as G4MFW/ZL8 from now until Monday the 15th of May. He will be using a beam and linear and plans to operate around 3798, 7080, 14195, 14260 and 21295 kHz, SSB only, mostly split and listening up. QSLs will be handled by Phyllis, KA1JC. The Kermadec Islands are one of the rarest DXCC countries as they are a highly protected environmental area, and landing and operating permission have been refused to many previous would-be operations.

From Malawi, well-known DXer Peter Casier, ON6TT, will again be signing 7Q7XT for about one month from Thursday the 11th of May.

And from Crete, three Hungarians will sign SV9 stroke HA0DU, HA0HW and HA0RT from Tuesday the 9th until the 16th of May on all bands and modes.

During the CQ Mir {pronounced "Meer"} contest next weekend they will sign "SV9/HG0D Portable". QSL all contacts to HA0HW.

Next the Rally News:

The Amateur Radio Caravan and Camping Club is holding a rally at Weston, Northamptonshire, over this Bank Holiday weekend of the 6th to 8th of May.

And please note that the Mid Cheshire Amateur Radio Society rally, which was due to have been held on Monday the 8th of May, has been cancelled.

Next Sunday, the 14th of May, the Dunstable Downs Radio Club will hold the national amateur radio car boot sale at Stockwood Country Park, Luton, near junction 10 of the M1. The event will take place from 10.00 am until 5.00 pm and there will be talk-in provided on 2 metres. Plots can be purchased on the day, or can be pre-booked until Thursday the 11th of May by phoning 01 582 451 057. For other members of the family, there is a craft museum, collection of horse-drawn vehicles, environmental exhibits, train and carriage rides and much more.

The Drayton Manor Radio and Computer Rally will take place at Drayton Manor near Tamworth in Staffordshire on Sunday the 14th of May. The usual traders will be there, there will be a bring and buy stand and the doors open at 10.00 am. For further details contact Norman, G8BHE, on 0121 422 9787 in the evening.

Now information about a change of venue for Plymouth Radio Club's annual radio and electronics fair, which will be held on Sunday the 28th of May. It will take place at Coombe Dean School in Plymstock, and not at the address shown in the May RadCom. For further information contact Frank Russell, G7LUL, on 01 752 563 222.

Now for the HF contest news:

The Italian 'ARI International DX Contest' is taking place this weekend, from 2000 UTC on Saturday until 2000 UTC on Sunday the 7th of May.

Next weekend, the 13th and 14th of May, the Russian CQ Mir contest will take place. This is a mixed mode - CW and SSB - event.

Next some VHF contest news:

The IARU 432MHz to 24GHz contest is taking place this weekend, on Saturday the 6th and Sunday the 7th of May. The rules are in the March RadCom.

And now the solar factual data:

The period from the 24th to the 30th of April saw solar flux levels decline and the geomagnetic field return to quiet levels. No sunspots at all were reported on any day. Solar activity was very low. Solar flux levels declined from 73 units on the 24th to 67 units by the 30th, a level which is only slightly higher than that expected at sunspot

minimum. The average for the period was 69 units. The electron fluence was high on most days. The X-Ray flux levels declined from A6.9 units on the 24th to A1.0 units by the 26th and remained at that level for the rest of the period. A1.0 is the absolute minimum reading and is indicative of a very quiet, spotless, visible solar disc. The 90-day solar flux average on the 30th was 83 units, down one unit from last week. Geomagnetic activity declined from "unsettled" conditions with an Ap index of 25 on the 24th, to "quiet" levels on the 30th with an Ap index of 5 units. The average was Ap 16 units. The aa indices, as supplied by the British Geological Survey for the 18th to the 24th of April, started at quiet levels and declined to only 5.5 nanoTeslas by the 21st. Levels started to increase from the 22nd and finished up at "sub storm" levels on the 24th with 40.8 nanoTeslas recorded. The average for the period was 20.1 nanoTeslas, just K3.

I'll repeat the figures:- spots - 0, flux - 69, Ap index - 16, X-Ray flux - A2.5.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 21st to the 27th of April, averaged 6.3MHz. The best day was the 22nd at 7MHz. The darkness hour lows declined from 3.5MHz on the 22nd to 2.2MHz on the 27th, with an average of 2.9MHz. The daytime highs took place mainly between 17.00 and 20.00 hours, but were as early as 13.00 hours on the 21st and the 23rd, with the darkness hour lows taking place between 03.00 and 04.00 hours.

I'll repeat the figures: highs - 6.3MHz, lows - 2.9MHz.

And lastly the solar forecast.

This week the more active side of the sun will be coming into view. Solar flux levels are expected to increase up to the high 80s. Geomagnetic activity is expected to be at "unsettled to active" levels for the first half of this week and then decline to "quiet" levels for the rest of the week. Ionospheric MUFs during daylight hours are expected to be about 19MHz for the south and 16MHz for the north, particularly later in the week. The darkness hour lows are expected to be at about 11MHz. Sporadic E can now be expected occasionally, increasing towards a maximum in June.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Zulu and G7 Uniform Quebec series, and Novice calls in the 2 0 Alfa Lima and 2 1 Delta Yankee series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

> I have been thinking about buying one. Does anyone have any comments
> good or bad. Thanks.,

I've owned a 580 for several years now and really like the radio, recently my wife became a ham and we got a 582 because we like the 580 and thought it might be better. The only thing I like about it better is that it scans a little bit (not a lot) faster. It does have bigger buttons and knobs but that isn't much of an improvement.

The things I don't like about it is that it doesn't cover 800 mHz at all and when you turn the radio off it defaults back to the non-scanning mode. I leave my 580 in the scan mode with the FL (Frequency lock) and PL (Push to talk lock) on all the time and when I turn the radio on it continues to scan in this mode but with the 582 you must unlock the FL/PL put both bands back into the scan mode and then turn the FL and PL back on.

This to me is an annoyance to have to do every time you turn the radio on. My wife on the other hand usually only listens to one repeater so she gets the 582 and I keep the old 580. :)

Most of the newsline issues are archived at the following site:

ftp://oak.oakland.edu/pub/hamradio/docs/newsline

I say most because when I arranged to have them archived, the archiving
started somewhere with issue 700-something.

: doing just this same thing by using HT's and code practice oscillators
: on a little used local repeater. I believe that there are a lot of
: good reasons to do it this way:

{excellent rationale deleted...}

: As I envision it, a group of interested people could congregate on
: that frequency at whatever time they agree to meet and beep to one
: another with or without an elmer. I haven't been very successful
: yet but I'm still working on it. I suppose the best thing would
: be to set aside half an hour per night and just start calling CQ
: at a suitably slow rate. After a week or two I'm pretty sure I'd
: have a large enough group to continue by themselves but I just don't
: have that kind of time right now. Please let us know what you try
: and how it goes.

This is exactly what is happening with our local club. Each Thursday, there is code practice sent through one of the local 2M repeaters, from 7 PM to 8 PM. Tonight will be the first time that I listen in, so I'll put a report up here tomorrow morning.

Not sure at this point what speeds are sent. The club also teaches code each Wednesday night, as well as theory classes, but they stop short of Extra, my next rung on the ladder.

Your point about 2M is well taken. While I hold an Advanced Class license, I have no HF gear set up at this time, so listening to W1AW isn't feasible.

Forward (and backward) slashes are "forbidden" characters in newsgroup names. The reason is that all news server software sooner or later has to access files and directories, and since the usual convention is to map the dot-delimited components of a newsgroup name into subdirectory names, the slashes could possibly be misinterpreted by the operating system as directory-name separators.

The Catalina machine at 147.090 (600+), I don't remember any PL
being required.

You could also try 147.435, input is 146.400, PL is 103.5, ;-}

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 04/2330Z MAY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 04 MAY AND FORECAST FOR 05 MAY - 07 MAY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 71/6

GOES satellite data for 03 May
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA (normal)
X-ray background: NA
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
05 May 06 May 07 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 05 May: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active

Estimated Indices : A K Observed A Index 03 May
Learmonth 22 4443 4433
Fredericksburg 21 35
Planetary 30 43

Observed Kp for 03 May: 5666 4334
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
05 May 20 Active
06 May 20 Active
07 May 16 Active
COMMENT: IPS Geomagnetic Warning 13 was issued on 1 May and is
current for interval 4-7 May.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
04 May normal normal poor-fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
05 May normal fair poor
06 May normal fair poor
07 May normal fair poor

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
04 May 8 near predicted monthly values

Predicted Monthly T index for May: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
05 May 10 Near predicted monthly values
06 May 15 Near predicted monthly values
07 May 15 Near predicted monthly values
COMMENT: IPS HF Communications Warning 17 was issued on 1 May and is
current for interval 4-6 May. MUFs at Townsville were near predicted
monthly values. MUFS at Hobart were about 15% below predicted
monthly values.

2328. Re: Transceivers and New Car Warranties

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-04 00:00:00 UTC
From: Ed Ellers <edellers@delphi.com>
Message-ID: <h24cKtN.edellers@delphi.com>
Source record: 247224

John E. Taylor III <mah48d@rohmhaas.com> writes:

>That ain't the way I read section (c). Looks like what's prohibited is
>tying the warranty to use of specific goods and services. For example,
>"This warranty shall be void unless genuine GM replacement parts are used"
>or "Use of any cell phone other than an AT&T cell phone will void this
>warranty."

I'd have to agree there. Note that a manufacturer *can* demand that its own replacement parts be used *if* it provides those parts under the warranty as needed.

Now there could be antitrust considerations if a manufacturer bans a category of aftermarket accessories, if it's a category that the same manufacturer happens to sell (i.e. a car maker banning aftermarket broadcast radios), but AFAIK none of the automakers are offering ham gear yet :-).

In any case I wouldn't go by what the dealer says at all -- the *manufacturer* warrants the product and sets forth the terms in writing, and usually will not allow the dealer to modify those terms, so be sure to read the warranty before you buy. Under the law copies of the warranty must be made available for any product costing over a certain amount (something like $10-25). If one is looking at a GM or Chrysler vehicle, it should be noted that those manufacturers circulate fliers telling how to properly install medium-power transmitters in their vehicles, and others may be doing this as well.

>From what I have read here on the forum, it seems the problems
>arise because some folks feel that K1MAN is bullying other stations
>around by coming up on frequency with his transmissions without regard
>to who may be using that frequency. I don't recall ever hearing W1AW ask
>if the frequency was in use before transmitting bulletins. But that
>is OK with me, if I am cognizant of those frequencies being used
>for those purposes, I simply find another. It's no big deal!

>Bill - K5MIL

It's a big deal to the people who get bullied off the frequency by the
ever increasing agenda of Glenn Baxter and his broadcasts. It is
going to get worse now that he thinks he has a blank check to cash against
amateur radio. I am certain there are going to be a few more like him climb
up out of their cracks here soon as well....

I hope everyone that was so agressive in slamming the door on the
opportunity for some relief remember where they stood. I know I will.

73 Bill..

Special Forces units indeed do use Morse for some of their operations.

What was mentioned by GEN Sullivan was about for the 'normal' ground
troop. Special operations are just that, and require different
arrangements for the capabilities.

Youthnet NEWS 014 5/4/95
Jennie Finch N9SAK
Alexis Leynes N9KYJ

Topic: W5YI wants to regulate one way HF bulletins.

Instead of sending out Youthnet NEWS 014 on the Dayton Hamvention, I have this important bulletin that may affect how others use the HF bands. If you haven't known, Fred Maia W5YI of the W5YI group (another informational service and FCC study material provider), has send in a petition to consider ending the one way bulletins sent by amateurs on the low bands (below 30 MHZ). This is what he had to say in a personal interview, "The proposal I made was targeted against long winded voice bulletins that take place on a several bands at the same time also that the people who run the long winded bands at the same time also that the people who rum the long winded bulletins seem to think that they own the frequency and the come on several HF bands simultaneously regardless who is on frequency... The bulletins are causing a lot of problems on the HF frequency. I included CW because they operate on the same system...The rules state that you have to cooperate in using frequency. I do not think that it is right for a station to come on at a certain time on a given frequency." When I brought up the question on a situation of people in another country who depend on these bulletins for code practice, he said this, "Perhaps what we need to do is to have certain frequencies designated for bulletin stations. So we do not have bulletin stations coming on top of other stations and angering people. Possibly we could limit the amount of time a bulletin station take so, that may work. But we have to remember that there are a lot of other stations other than W1AW. We got people who read the Bible, and people doing endless voice bulletins on 160 meters forever and ever...I wouldn't mind if it was being accepted by the amateur radio community. The problem, it is not being accepted by the amateur community." When asked if the existing rules in part 97 can regulate existing "bulletin stations", he replied that the part 97 on broadcasting amateur radio bulletins are so vague.

In a nut shell, he doesn't believe that this petition (if it ever goes into a proposal for rule making), will be in its current form. Comments to this petition was due today to the FCC May 4, 1995. The Rule number was RM-8626.
Thank's to Fred W5YI for taking time for the interview.

I have for sale a TH6DXX tri-band beam (10-15-20) for which I'm asking $325 and 5 sections and a top section of Rohn 25G. The top section has a plate for a thrust bearing. I also have the guy wires (three sets), turnbuckles, and various mounting hardware for the guys. I am asking $225 for the tower and accessories. If you are interested please email or call me at 214-233-2386. I am located in Dallas, TX, and it is not practical to ship these items. I also have a CDE CD-44 rotator without the control box for which I'm asking $35 plus shipping. Thank you much for reading this...Fred W5HTR

In article <Bk2-SrC.armond@delphi.com> , armond@delphi.com writes:
>I'll put my money on the Special Forces.

This is a silly statement in the context of "military" use of morse code or not. The special forces are a small, special purpose organization that does not represent either the needs or the directions of the general U.S. Army. The U.S. Army is moving in a big way (albeit slowly) to digitized
communications with heavy use of satellite communications and moving a great deal of the signal responsibility from the division level to the corps/army
level. Morse code plays no role in the overall army strategy either for tactical or strategic communications.

Special Forces may or may not continue to use morse. As long as some other countries use morse for communications the signal corps will continue to train morse code intercept operators. However, neither of these reflect the communications strategy of the U.S. Army as a whole.

I won't put your money on the Special Forces just because they use morse code. SF provide valuable auxillary services for the U.S. Army and that is why one should put ones money on them.

Erich

|> Extra class amateurs who don't meet your ideal.

Around were, we have dozens of "2 month extras". People who go from having
no license to having an "Extra" license in two months, usually by memorizing
the question pools and guessing correctly on 7-out-of-10 multiple-guess
code tests. They then get on 2 meters and tell everyone how much they know.

Seems to me there's a crying need for low speed CW nets operating in
the VHF and UHF bands, so that no-coders, or anyone who needs code
practice, can learn in a "live fire" environment.

<good stuff deleted>

I agree with Dan and have been trying to get some folks interested in
doing just this same thing by using HT's and code practice oscillators
on a little used local repeater. I believe that there are a lot of
good reasons to do it this way:

The new operator often has only a 2m HT

A code practice oscillator is a simple construction project

Voice communications is available for clarification
("Ed, did you send a '6' or a 'B'?")

The learning process is speeded up by involving more senses
(Learning by hearing AND sending is faster than by hearing alone.)

It can be done in the comfort of the persons' kitchen with no drive time.

The mode is MCW (F2A) and is perfectly legit on the repeater frequencies.

As I envision it, a group of interested people could congregate on
that frequency at whatever time they agree to meet and beep to one
another with or without an elmer. I haven't been very successful
yet but I'm still working on it. I suppose the best thing would
be to set aside half an hour per night and just start calling CQ
at a suitably slow rate. After a week or two I'm pretty sure I'd
have a large enough group to continue by themselves but I just don't
have that kind of time right now. Please let us know what you try
and how it goes.

It's not. And thanks for illustrating my point. Most radio amateurs won't look beyond their own tiny world of RF except in that RARE case outside of the hobby where their own view of the RF world is "supported". That was exemplified by the post to which I responded.

The thought that there really might be something new to learn beyond that taught in the theory portions of the exams seldom occurs to them. Besides, they've probably got another high-tech contest to occupy their time.

>To use my words ... 73, and see you on AM --- golly, I even have to turn the

[924]

The following is a QST

Hamvention '95 is on, the Special Olympics are coming and call sign relief is here. All this and more on Newsline report number

924 coming your way right now!

(*****
HamVention '95

It's Hamvention time in Dayton, Ohio. The time of year when well over 35,000 radio amateurs from around the world destined on this small midwest city for what has become known as the show of shows in amateur radio. And what's happening at hamVention '95?

The 1995 edition of the Dayton HamVention is bigger and better this year. The 44th edition of the greatest spectacle in amateur radio opened to bigger crowds, bigger exhibits and a bigger flea market.
This years flea market consists over 2600 spaces, including 138 spaces in the tent area. Encompassing over 10 acres all on pavement. They say that if you can't find what you want at the flea market at Dayton, it can't be found.
Indoor exhibits consisting of over 500 spaces adorned with all the new and innovative amateur gear is available throughout Hara Arena. Other areas of interest at this years HamVention, forums, alternate activities, drawings for hourly prizes, the Gala Banquet and the major prize drawing on Sunday.
I was given a tour of the special events station W8BI/8 by trustee, Charlie Cotterman, KA8OQF. This special events station is again this year located in the flea market area. This station is fully equipped this year by S.G.C. and is operating on 80 through 10 meters, including the novice bands. Utilizing both phone and cw.
Directions and assistance to the ham are again provided by the very capable talk in committee on the 146.94, 223.94 & 442.1 Dayton Amateur Radio Association repeaters.
MIDCARS again monitoring 72.58 Mhz and will provide travel assistance.

HamVention '95 appears to be off to a good start. We will bring you a complete wrap up next week.

(*****
DAYTON SCHOLARSHIPS

An in a related item, the Dayton Amateur Radio Association is inviting hams who are high school seniors to apply for their scholarships. Those interested should send a self addressed stamped envelope to the Dayton Scholarship Program at 45 Cinnamon Court, Springboro, Ohio 45066.

(*****
SPECIAL OLYMPICS SUMMER GAMES

Brian Battles, WS1O reports that the Personnel Manager for Amateur Radio volunteers at the 1995 Special Olympics World Summer Games, Lance Seelbach, N1TAN, now has an on-line address. You can

send messages to Lance at N1TAN@MAGIC.COM. Lance lives in West Hartford, Connecticut, and his telephone number is (203) 231-7244. Brian Battles adds that ham radio volunteers for the games are still needed. Anyone who wants to volunteer to assist with communications should get in touch with Lance. He can direct you to the Project Manager for the area you want to help with, and he's keeping a data base of ham volunteers.

(*****
CALL SIGN RELIEF

Call sign relief is here. That's what the FCC says in a new fact sheet dealing with an ARRL request for additional call sign availability to amateurs in Hawaii, Alaska, and Puerto Rico has been honored. The new fact sheet incorporates changes that the League asked for in November 1993. It expands the opportunities for amateurs in Alaska, Hawaii, and Puerto Rico to obtain call signs that reflect their geographic location.
According to the FCC, all systematically assigned call signs in

Groups A, which is the Amateur Extra Class, and C the General, Technician, and Technician Plus class for Alaska, Hawaii, and Puerto Rico using the traditional numerals 7, 6, and 4, respectively have been exhausted. Because of this, call signs in Region 11 which is Alaska, all AL, KL, NL, and WL are no longer limited to the numeral 7. In fact, any numeral, 0 through 9, is now available. There is one exception. The KL9AA through KL9KHZ are being held in reserved for assignment to US personnel stationed in Korea.
In the Caribbean which is Region 12, all KP3, NP3, and WP3 or 4 prefix call signs will indicate the Commonwealth of Puerto Rico except for Desecheo Island. Out to the west, in Hawaii and the Pacific known as Region 13, there AH7, KH7, NH7, and WH7 or 6 prefix call signs will indicate Hawaii. The exception here is that the letter K following the numeral 7 will indicate Kure Island.
The new fact sheet also designates Group D call signs for club and military recreation stations, applications for which have been accepted by the Commission since March 24, 1995.
It is not known if the FCC has yet issued any call signs under these new guidelines. The Amateur Station Sequential Call Sign System Fact Sheet dated February 1995 replaces one dated June 1991 that is referenced in the FCC's recent vanity call sign report and order.
And if it sounds confusing, don't worry. The FCC's new computer is programed to take care of it all.

(*****
PHONE COMPANY FINED

The Federal Communications Commission says that it plans to fine Oncor Communications Inc. 1.4 million dollars for allegedly

violating rules that prohibit the unauthorized switching of consumer long distance carriers. The FCC says that a probe found that Oncor allegedly substituted itself as the long distance carrier for over ninety pay telephones maintained by the New York State Metropolitan Transit Authority. The agency alleges that Oncor substituted itself twice as the long distance carrier on certain MTA phone lines, converting some of the pay-phone lines after the MTA had already canceled unauthorized service once before. The FCC says it has notified Oncor that it may be liable for fines of $15,000 for each violation.

(*****
WHOSE RUNNING ARRL

As you are all aware, ARRL President George Wilson, W4OYI is still in recovery from a stroke he suffered on February 11th. This while in Washington, DC on League business.
Now that the critical period has passed and George is in the rehabilitation phase of his recovery we thought we would take a look at how the ARRL functions when one of its leaders is taken ill and temporarily out of the scene. That's the question we posed to the Leagues Executive Vice President David Sumner, K1ZZ:

"When something like this happens, you defiantly miss the input and participation of whoever it happens to. Particularly when it is the president. On the other hand the league is an organization and it doesn't rely on any one individual to function. In this particular case, Rod Stafford, KB6ZV, who lives in San Jose, CA is the First Vice President of the League. And Rod stepped into the breech and essentially everything is functioning normally." Dave Sumner, K1ZZ.

Dave Sumner adds that League members will not notice any difference in the functioning of the ARRL in the absence of President Wilson. He says that the credit for this goes to W4OYI:

"That is because Georges own style as president, which was to involve a lot of people in the process." K1ZZ

The bottom line is that for the ARRL its business as usual, but as David Sumner, K1ZZ says, they are all hoping that W4OYI will recover quickly and will be permitted by his doctors to come back.

(*****

UK CALL LETTER PLATES DENIED

From overseas comes word that hams in England are still trying to get call sign vehicle license plates or "marks," as the British call them. And they are not meeting with very much success.
The Radio Society of Great Britain reports that after four

meetings with government officials a method still has not been worked out. This is because the government says that opening up the "G" prefix exclusively for amateur radio call sign plates would require an Act of Parliament. In addition, the opening of new license plate prefixes is supposed to generate the maximum possible revenue. The British government contends opening "G" to hams would not generate enough income to make it worthwhile.

(*****
DX

In DX, Ethopia as ET3KV has been heard on 18.117 MHz around 19:30 UTC and ET3BT is also working free style on 14.226 MHz around 19:15 UTC Another Ethiopian signing ET2AA has been heard on 15 meters near 21.240 MHz around 13:45 UTC as well.
Over to Uganda where Frank, 5X4D, is on the air almost daily starting at 18:00 UTC on 21.295 MHz and then on 14.245 MHz at 19:00 UTC. QSL via IN3DYG.

(*****
YOUNGEST CALIFORNIA HAM

And finally, Jeff Levine, N6CUR says that he is a very proud father. This is because his seven year old son Jason has is now the youngest ham radio operator in the state of California. At least according to the latest computerized records.
According to the elder Levine, Jason passed both his Novice and Technician class examinations on his first attempt after only three months of study. Shortly thereafter the FCC issued Jason the call letters KE6RPN.
Jason is currently a second grader in the Horace Mann Elementary School in Beverly Hills, California where he has been singing the praises of ham radio to his fellow students. And even at age seven Jason is a convincing salesman. Word is that other kids in Jason's class, and their teacher, have expressed a desire to get their ham licenses and join KE6RPN on the air.
And before you ask if Jason Levine is the youngest person ever to be licensed in California, that honor is still held by Veronica Harrington, KC6TQR of Long Beach. Veronica, who appeared on the David Letterman program and made live contacts from the studio received her Tech class ticket in 1991 at age 6.

: experiences with it. I've never gotten beyond the "thinking about it"
: stage myself. I do think that a ferrite loop, such as the ones found in
: old AM pocket radios might have a good chance of working. However, that
: would only probably work at frequencies of several MHz, and the
: transmitter would have to have a big antenna to get the signal out.
: Anyway, I'd appreciate any comments.
: Jim

Anyone can make a DF unit with a few thou. Just put a small GPS unit in a
box, along with a transmitter. The transmitter continuously gives out its
location, and even elevation. Any small calculator sized box can hold a
receiver that will pick it up. So I lied, it's actually an absolute
position transmitter. GPS units are under a thou, but I don't know if
those will have the interface to put out the info.

Drop a note to: QCWA
159 East 16th Ave
Eugene OR 97401-4017

or call: (503) 683-4181

and request an info packet. Dues are $15/year - a one-time $3 initiation
fee is also required, making your first-year dues $18.

Also, check to see if there's an active QCWA chapter near you, and visit
with them. You miss a lot if there's no active chapter that you can get
involved with.

I would tend to believe the statements of the Commander, USSOCOM.
My personal observations as a Signal Corps officer in an Army Reserve
Special Operations unit would also support the Commander's statement.

Just because the Army CoS didn't mention the use of Morse code,
doesn't mean that it is not being used. Granted, it's not used
in the "Big Army" anymore, just primarily in Spec. Forces. I imagine
the CoS didn't say anything about Basic Training, M-16 rifles,
MRE's (meal, ready to eat), or the Abrahms tank -- so, I guess the
Army has gotten rid of these things too! :-)

I must admit that I haven't read the article from "Wireless" magazine.
However, I imagine the focus of the article was on the use of
advanced technology to meet the current and future communication
requirements of the Army. If the emphasis was on development, I
don't think it would have really been appropriate for the CoS (or
the author) to describe something like Morse code -- It just
wouldn't have fit the article.

You may ask, "With the availability of man-portable, digitally
encrypted satellite communication terminals, why would the SF still
rely on Morse code?" Well, here's my take on it:

The SF relies on small, self reliant teams for the accomplishment of there mission. As a result, they are often "on there own" with very little logistical support during the execution of there mission. Morse code would provide an alternate means of communication if something happened to the primary means. This concept of back-up/ alternate/redundant resources is a central theme in SF. That's why personnel are cross trained in a second skill: medics that are weapons specialists, communicator's that are medics, etc..

> For an honest and unbiased look at what is really happening in current-day
> military communications.....

> future, I invite anyone interested in the truth to obtain a copy....

Perception is a matter of perspective. Analyze the source, content, audience, and media before _you_ formulate _your_ _own_ opinion as to the credibility.

Scott

: >
: > So for $420 my wife and I had a cell phone for JUST EMERGENCIES !!
: >
: > So yes, for a year's worth of service, you can buy a new rig a year...
:
: That was exacltly my point, thanks for pointing it out so graphically.

: The thing with me is that I almost always go over the minimum fee so
: it was costing me close to double the minimum service charge. I think
: too many people are convinced by the advertising that cell phones are
: cheap to operate, just wait until you use one for a while.

I get my cellular service (including the phone) for
$29.95/month, include free evenings and weekends, no yearly
fee, no license, no activation, no committment. From the same
cellular company I see that the "emergency" package that cost $0.95/min
is $12.95/month or (it looks like) $48.95/year if you pay in advance.
This is subject to the activation ($60) and yearly license ($48 I think)
though. It sounds like your cell companies are taking you for a real
ride if the cheapest you can get service for is $420 a year. I logged
something like 30 hours in two months for $60 last summer (busy time).
I don't use it nearly so much now but a portable cell is SO handy to
have and only rings when it's for you...

2350. Can I use my PC as a CW keyer?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-04 00:00:00 UTC
From: ys@isr.harvard.edu
Message-ID: <3oaq29$56k@decaxp.harvard.edu>
Source record: 247328

Can I use my IBM PC as an iambic CW keyer? I would like to connect an iambic paddle to a PC serial port, and also to connect the serial port to a CW key jack of an HF transceiver. It might not have any major advantage over the keyers already available, but I just want to try it for fun.

If anybody has done it already, I would certainly like to have a PC program for such a configuration. Otherwise, I would like to write a PC program for myself. Unfortunately, I do not have much technical background, and need some help. The first thing I need to know is how I can connect the serial port to the CW key jack. As I understand it, in RS-232, on state is represented by voltage between +3V and +20V or so, and off state is represented by voltage between -3V and -20V or so. How can I use this voltage to drive the HF rig for CW? I took a look at ICOM's manuals, but could not find any specifications.
I would be very grateful if anybody can tell me what document I should check. Thanks!

Just for old time sakes, I bought a Kenwood TS-820S (like the one I had years ago) at the Dayton hamvention with the intent to play around and refurbish it. I'm starting with the front-end and working backwards, but can't seem to find any specs on the front-end transistors around my shack. Does anyone have or know of a ready source for specs on the following FETs: 3SK35 and 3SK41? Also, if anyone knows of any worthwhile mods to the '820S that I should consider, please let me know. (I already know of the existence of the IRCI mods, but don't know how well they work.)

From: cole@netcom.com
Message-ID: <coleD83402.7F4@netcom.com>
Source record: 247046

Actually, although Signal Electric did make quite a few spark keys, most SE keys were made for landline telegraphy. If the contacts on your key are 1/4" diameter or greater, it is indeed a spark key, or at least could have been used on a modest spark transmitter.

$25 would indeed be a good deal for a spark-type SE key, but is fairly typical for a landline SE key.

There seem to be more and more people who overprice keys either out of ignorance or greed. For complete units in good shape, an ordinary straight key should be $40 or under, and an ordinary bug should be $100 or under, regardless of what some Dayton pirates might try to pull.

The SE key pictured on Page 46 of Keys, Keys, Keys is definitely a spark key. The book has lots of nice pictures but some of the information should be taken with a grain of salt. For example, "railroad detective" key on Page 66 is really from a relay test set. If all the miniature "spy keys" around were really used by spys, then each spy musta been issued about 100 keys :-).

Greetings-

In a previous article, geo@nando.net (George McCrary) says:

> I recently received a card from Moldava direct, and the DX had
>included cards for contacts he had with KP4, HZ1, PJ8 and C91. He had
>a note asking me to send them to the outgoing bureau with my next
>batch of cards.
>

First off, congrats on geting a card direct from Moldava! Wanna help me get one direct from CIS Georgia? Hi.

> This doesn't bother me too much, except for the question of what the
>ARRL outgoing guys will say if I stick them with my cards! Of course
>it's the other guys, not the ER3 who will miss out if I toss the
>cards!

I can't comment on what the buro would do.. might try one ofthose "Pay-per-use" QSL services. However..

If this were to happen to me (it has, but not for DX stations), I'd dip into my wallet and send 'em direct. I'm even next to broke, but I'd like to think that somebody would go to the same kind of trouble for me.

I see a similar (but not identical) situation with the RK2FWA QSL's...I sent mine off to a DL manager, with my $2 for return postage. I got my cards back with a US stamp and a note saying that my $$$ for postage went to help keep the club up and running (new feedlines, electricity bills, rent for the building/land, etc). The bottom line question is: I sent money to pay for a return QSL; did I get my card, yes or no? I'm not particular about the WAY it gets to me, just as long as it gets to me. But then I'm a fairly relaxed person. I could understand how this could be a big deal to somebody.

73,

Sean

1995 14* 13* 13* 12* 12* 12* 12* 11* 11* 10* 9* 9*
1996 8* 8* 8* 7* 7* 8* 9* 10* 10* 12* 13* 15*
1997 16* 18* 21* 23* 26* 29* 33* 38* 43* 48* 54* 60*

Asterisk indicates predicted value. No predicted values have changed
relative to the set of T-indices contained in last month's Summary.
For information concerning ASAPS for an IBM PC (or compatible) contact IPS.

The IPS Monthly T-index is derived from the observed monthly median values
of foF2 for each hour at up to 40 ionospheric stations worldwide.
These records become available from IPS stations in Australia very soon after
each month, but the majority are received up to one year later.
This means that the exact observed value of the monthly T-index is not
available until some months later.

The predicted smoothed monthly T-indices are computed by using a statistical
analysis of the observed monthly T-indices for all solar cycles since 1938.
The IPS T-indices may not be updated each month but only when sufficient new
data becomes available.
==========
2. FLARES AND SHORT-WAVE FADEOUTS
MAX DURATION
22 Apr 95 M7.1/2F 1151UT 1128-1159UT
22 Apr 95 M1.2 1742UT

2.1 Comments on Solar Activity.

High activity was observed on 22 April. Solar activity was at
very low to low levels on other days during the month.

The monthly averaged sunspot number of 14.6 was the lowest thus far
in the decline of the current solar cycle. Despite this low value,
the yearly-smoothed value for October - the last month which we can at
present define a 12 month smoothed value - decreased only slightly
from the September value and the general decline of the solar cycle
appears to have stalled.

At the IPS Solar Observatory at Culgoora, there were 11 days during
the month on which the sun was without spots. This is more than any
other month in the decline of the cycle, although there was a longer
sequence of days split between May and June in 1994.

==========

3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)
DATE COMMENTS
7 Apr 95: 44 unsettled to active until 12UT and storm levels theeafter.
8 Apr 95: 27 unsettled to minor storm levels.
10 Apr 95: 16 quiet to active levels.
11 Apr 95: 18 unsettled to active
23 Apr 95: 17 unsettled to active
24 Apr 95: 19 unsettled to active
27 Apr 95: 18 active-minor storm periods observed during local night hours.

Two main recurrent patterns influenced geomagnetic activity during
the month. The first period of activity was during the interval 7-11 April,
and the second during the interval 23-27 April. The highest Ap index
recorded for the month was 78 on 7 April. The last time the Ap neared this
value was 3 October 1994, when the Ap reached 62.

==========

IONOSPHERIC DISTURBANCES (for Sydney)
DATE T MUFs
8 Apr 95: -31 40% depressed during the local day and 15-30% depressed
at night. Regular Spread F during local night.
9 Apr 95: -16 30% depressed during the local day and 10-30% depressed
at night.
11 Apr 95: -4 10-20% depressed during the local day and near predicted
monthly values at night.
12 Apr 95: -9 15-30% depressed during the local day and near predicted
monthly values at night.

The above depressions were observed in association with recurrent
geomagnetic activity. The most significant depression occured on
8 April with a T-index of -30.

2357. Re: Map Program that works with a GPS

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-05 00:00:00 UTC
From: Bob Winingham <kc5ejk@onramp.net>
Message-ID: <3oca12$9mj@news.onramp.net>
Source record: 247049

Are you up on the Mac and PC versions of APRS
You can make your own maps from the USGS CD-rom
or use pre-made maps other have produced.

Check out the aprssig on FTP.tapr.org

Bob KC5EJK Dallas

2358. Tell me about your mobile dual purchase...I'm looking

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-05 00:00:00 UTC
From: johns022@acpub.duke.edu
Message-ID: <johns022-0505950044130001@dsj.pdial.interpath.net>
Source record: 247050

I'm interested in hearing about dual band mobiles, as I've finally convinced my wife to get her license, and we'll need to get two new rigs (she probably will do more talking with me than ragchewing, so we'll want encoding/decoding).

I recently looked at offerings by Icom, Kenwood, Yaesu and Alinco, but would like to hear from people who are actually using them. I've also heard that Alinco's coming out with a new one within the month that'll have a band usage graph which sounds interesting...

Please tell me why you bought yours, what you like and dislike about it, and what you'd get if you had to do it again now.

Thanks in advance. If asked, I'll summarize.

Email please!

73's,
David -- KA0KIR/4

To the point that the new operator usu. only has a 2m HT:

Can you connect a CW key to a HT? I have an ICOM IC-Z1A and would like to send code through it, but I doubt that it can handle this. True?

I think you press both MHZ buttons while turning it on. I did this but
can't remeber for sure. I do know it is holding a set of keys while
turning it on.

2363. Research on Wireless

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-05 00:00:00 UTC
From: kinwai@laukw.pl.my
Message-ID: <799668050.9snx@laukw.pl.my>
Source record: 247055

I'm a student who is currently doing a research project on wireless.
I would appreciate help from anyone concerning my project. I welcome any
articles, opinions, comments and ... from any individual, especially radio
HAM operators.

My research project is consisted of a few parts. i.e. :

A. Wireless Technology
- various types of radios e.g. shortwave, mediumwave...
- theory applied in wireless
- ways to resolve shortcomings
- problems in transmission

B. Pros & Cons of wireless
- advantages; how wireless help in daily life
- disadvantages; how criminal abuse it for crime
- Conflicts in wireless; no privacy, easily being monitored.

C. Impact on society
- how it changes lifestyle
- how governments, private sector, NGO utilize wireless
- how can the application be improved

D. Comparison
- Comparing wireless technology in various country
- How common is Radio HAM in various country

E. Research
- research currently done by institution to enhance wireless
- future prospect of wireless
- Can it be as common as phone & fax in future.

Thank you very much for helping !!!

Can anyone post me some printed materials concerning my research too ?
My snail mail address is as below.

2364. WANTED: CGA Geo/sunClock Software?

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-05 00:00:00 UTC
From: swood@saturn.acs.oakland.edu
Message-ID: <3od5m0$a8h@oak.oakland.edu>
Source record: 247056

Was there ever a version of GeoClock that supported CGA graphics?
I pulled down the VGA/EGA version the other day, but I can't help but
think that a nice small CGA version of a sun clock would make for
a great addition to my palmtop PC for doing remote work on DXpeditions.

Anyone have a copy of something that might help me out? I don't really
need the 3d views. Just a flat old (small?) sunclock program will do.

swood

: Life's Golden Rule: "Whoever's got the gold makes the rules."

I downloaded it and played briefly. Did it on a Mac. There are three or so
software packages out there = all can be found with a web search. Sorry,
the URLs for these are at work - I am at home now.

Essentially, each package has a proprietary software compressor
operating at about 1300 bytes/sec. I tuned into a college radio
station = sound is OK except during busy net times (east coast peak
business hours) and when complex music is sent. Curious. If it
catches on, the net could be flooded with phone calls.

Uses only some simple audio digitizer and a simple audio D to A.
I used the cheap-o stuff which comes standard in the Mac DUO 230.

2366. Re: 2-meter HAM vs. Cellular

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-05 00:00:00 UTC
From: wcoyle@dccc.edu
Message-ID: <6760EHLQRLRAQEYFXH@dccc.edu>
Source record: 247058

Two things to think of with those sattelite phones are;

1: Those birds can only have so many channels. Even if you have
1 million cell phones in the hands of the public can one sattelite
handle all that traffic?

2: The sattelite phones are much more expensive than the regular
surface to surface phones. Not only is the hardware expensive, but I
believe airtime is supposed to start a $3.00/min.

One final note I forgot to add is that if you want to contact
someone in an emergency via a cell phone you need to know there phone
number. Let's face it, you can't set up a communications net when you
have to dial every stations phone number every time you need them. Cell
phones may be ok for smaller problems like plane crashes, ect. But for
a grand scale earthquake, I don't think you could beat a 2 meter net..

Tnx & 73

2367. Re: QST is becoming a rag (CALL FOR PRICE)

Newsgroup: rec.radio.amateur.misc
Date: 1995-05-05 00:00:00 UTC
From: phillips@eso.mc.xerox.COM
Message-ID: <9505051152.AA24120@zombi.eso.mc.xerox.com>
Source record: 247059

DT>You know what really burns my butt about ads in QST? The vast majority
DT>have '$CALL$' as the price for darned near everything they sell. I hate
DT>that - I'd rather see a price that may be lower when I call than have to
DT>call in advance to choose my dealer. I've had one guy say one price and
DT>another a different price from the same place on the same day, both claiming
DT>to be the lowest price!

BC>I DELIBERATELY turn the page as soon as I see that "Price: CALL"
BC>nonsense!

Then you aren't really serious about buying right now. If you're just
curious about the price..... check your AES catalog.

BC>I will not do business with any dealer who pulls that stupid stunt!

Then you will miss out on the best deals. It's a very competitive market
and dealers are constantly trying to win your sale by having a better price.
The ones with the -CALL- for a price are saying "Call us, we'll make a deal".
They always bargain. The accessory stuff has a set price because they
have a tight profit margin, but the rigs are always negotiable.

I call the ones with the 1-800 number first, but of course you gotta
realize the cost of operating that 1-800 number adds to their overhead and
eventual price of their equipment.

Before buying, you need to shop around for price, service, and support.
You can -always- beat the deal of someone who states a flat price in a
national magazine. BTW, this subject has nothing to do with the editors
or contributers of QST. It's far from a "rag".

Bob,

I drive a '91 Cherokee Laredo. I've owned it for two and a half years. I have never had a problem with ignition or electrical noise of any kind. I run a two meter mobile and a scanner. In addition, I also have my cellular phone tied in to the same circuit. Never had a problem, both transmitting and receiving.

Hi Luis:

There is a software package available for $49 that allows you to talk
over the Internet by using a microphone plugged into your Sound Blaster board.

If you don't have a Sound Blaster board, the company offers a board
along with software for $199.

I think that I saw an ad for this stuff in Internet World. Then again,
it may have been in BoardWatch.

Call me silly, but isn't it illegal to transmit on a commercial band with a
radio that is not FCC type accepted for that band? While I am sure that the
FT-11R can transmit outside of the ham bands, I think you should consider
something that is Type Accepted for the Commercial band, and then you can use
it in the ham bands. Most motorola radios will do this, but they cannot be
field programmed. But with a 99 chan. radio I thnk you could get almost
everything you need programmed into it.

Good Luck

seen this information?

Information on other electronics museums is also of interest.
Thanks, and 73,
doug

Doug,

I don't have the pamphlet here anymore, but the museum is run by a
not-for-profit group that includes many of the hams from the
Westinghouse facility nearby. A check with information for Westinghouse
and a few cold calls should het you to the info you need. When I was
there a couple of years ago, I had to work when the museum was open,
:-(, but it sounded real interesting. Lots of old RADAR stuff and
military comms. I recall a big military shelter trailer outside, makes a
good landmark. I think they close the doors at 5:00 though.

Fellow hams: I'm looking for anyone out there who has experience, good or bad, owning and using the Azden brand of radios.

Whilst looking for a non "bank breaking" 6 meter rig, I stumbled across the Azden PCS-7500H, which goes for about $389 currently. There were actually several others around, but momma, the prices be outrageous! Especially the "Yaecomwood" group. :-)

I have heard a few folks express some satisfaction with the 2-meter stuff that Azden makes, but thought I'd ask here and see about getting perhaps a broader concensus.

To head off possible deluges of one question, YES, I *do* realize that this radio will NOT do CW or SSB but only FM.

I have NOT been able to locate, so far, what I consider to be a decent, affordable 6-meter sideband radio.

Post here is you must, but email would be preferred.

I hope I do not get flamed to much for this but I believe to be a problem the amateur radio community needs to address.

The other night I heard a local ham working a CT1 station on 20 meters. No problem with that except he was going through a local 440 machine. I listened on 440 and heard the same qso. The ham was operating within his license and I have no problem with that. Here is my question. Does contacts made through a remote link count for awards? Also could a remote be used in a contest? I do not feel that remote links should be used for either since you are not operating your station on the band that you will receive the award for. I am sure the qsl will not make an indication that the contact was a remote one. If this is allowed then you are really taking away from the guys who work hard on their own station to achieve awards.

I guess you could say I would like to ask what is the purpose of these links anyway. I do see a purpose for linking repeaters together for emergency traffic but all that should be done on VHF and UHF. I think the bands should be kept separate. Plus you are really using two freqs to make one contact. The bands are crowded enough without doing that. Plus it always offers a chance for ham to operate outside his license.

Again these are my opinions only but I would like to keep HF for low band and the operation of my station.

If the Special Forces' continuing use of Morse code makes Hams feel
better about their hobby, then who should we be to ridicule them?

Morse code is a religion. As such, there is no gain in arguing about it
either way.

But think what good you could be doing for the hobby, both in operating
skills and technical fronts, if you were to expend even one tenth the
amount of effort on those goals instead of arguing for or against the
Morse code test requirement.

_ .. _ _ _ _ . .
D O N E
"The last rail is laid, the last spike is driven, the Pacific Railroad is Complete."
This famous telegraph message will, again, be broadcast to the nation, this time via ham radio. On May 10, 1995, at approximately 12:00 Noon Mountain Daylight Time, the Golden Spike Ceremony will be re-enacted at Promotory Summit, UT, starring, of course, locomotives CPRR "Jupiter" and UPRR 119, under steam. This year, we have added the actual transmission of the events as they were originally sent to the nation by WN Shilling via Western Union using morse code. (This time, we'll be using international code, so most ham operators can understand the messages). The Utah Box Elder Thiokol Amateur Radio Club will provide the telegrapher (Boyd Young, N7WFM) to send the signals from the beginning of the re-enactment to the completion message sent to President Grant at approximately 12:47 PM MDT. Norm Lucas, of Sacramento WB6RVR) will do the honors of officially receiving and intrepeting the messages for tourists in the lobby of the California Railroad Museum, Old Sacramento, CA.
Any ham operator or who would like to participate in this live transmission may listen in at the appropriate time, and communicate with the UBET Special Event station N7WFM, at Promontory after the program. A souvenier QSO confirmation postcard will be available to those who wish to participate in the event. We encourage operators to invite non-hams to listen in with them, so many may be able to join in the historic re-enactment live.
Signals will be set up to maximize effective communication to Sacramento, and may be listened to on one of the following frequencies, depending upon prevailing conditions that day: Primary 7.155 MCs plus or minus for QRM. Secondary 14.155 MCs plus or minus for QRM.
Please spread the word, so as many as are interested may be able to participate.

73, de Hans, K0HB

ARLP020 Propagation de KT7H

ZCZC AP88
QST de W1AW
Propagation Forecast Bulletin 20 ARLP020
From Tad Cook, KT7H
Seattle, WA May 5, 1995
To all radio amateurs

SB PROP ARL ARLP020
ARLP020 Propagation de KT7H

Conditions are pretty rotten right now, with no visible sunspots and geomagnetic conditions active. There were sunspots visible only two days last week, and the solar flux has been down near the minimum.

Solar flux should rise slowly, peaking for the short term near 95 around May 23 and 24. It should then drop quickly back toward the current level. Unsettled to active geomagnetic conditions are expected for the next few days, and again around May 21, although probably not as severe.

Sunspot Numbers for April 27 through May 3 were 0, 0, 12, 0, 12, 0 and 0, with a mean of 3.4. 10.7 cm flux was 68.2, 67.7, 68, 67.2, 68.6, 68.8 and 69, with a mean of 68.2.

This week's path projection is to Argentina from the middle of the continental United States.

80 meters should be open from 0130 to 1030z, and 40 meters from 0030 to 1100. Check 30 meters from 2330 to 0800, and 20 meters from 1100 to 1400 and again from 2100 to 0700. 17 meters should be open around 1330 to 1600 most days, and again from 1830 to 0500. On most days 15 meters should be open from 1800 to 0230.

>Two things to think of with those sattelite phones are;
>
> 1: Those birds can only have so many channels. Even if you have
>1 million cell phones in the hands of the public can one sattelite
>handle all that traffic?

The Irridium system will use 66 low earth orbiting sattelites (LEOs). I don't remember how many calls will go via each bird but it's a large number. The footprint of each bird is sectored into many areas that almost look like cells that increase capacity. And it's a digital multiple access system. And it will be WORLDWIDE coverage.

>
> 2: The sattelite phones are much more expensive than the regular
>surface to surface phones. Not only is the hardware expensive, but I
>believe airtime is supposed to start a $3.00/min.

The cost of a low end sattelite phone will likely be double the price of a high end cell phone. Service and airtime charges will be higher. But the market these carriers will go after is not the same. They don't see themselves putting a phone on the hip of everyone in the world. They will sell the service to international business people that need worldwide communications in their pocket.

As mentioned before, cellular and 2M is an apples and oranges comparison. Adding the new sattelite systems (that aren't depoyed yet) is like adding bananas to the basket.

>
> One final note I forgot to add is that if you want to contact
>someone in an emergency via a cell phone you need to know there phone
>number. Let's face it, you can't set up a communications net when you
>have to dial every stations phone number every time you need them. Cell
>phones may be ok for smaller problems like plane crashes, ect. But for
>a grand scale earthquake, I don't think you could beat a 2 meter net..
>

Keep in mind that if you want to contact someone via ham radio they have to be a ham (or via a ham). Autopatches don't count in this comparison because they rely on telephones (which hams seem to think they can't rely on) and are operated by hams. And most hams don't have autopatch access beyond their home area without advanced arrangements.

The 'net' concept is a good point. But it relies HEAVILY on people that know what they are doing - and being there. Face it, the technology of

2M FM is not what makes it, or any other ham band, a valuable resource. It's the people that know how to communicate via radio - passing traffic and getting things done.

From a technology standpoint, cellular is superior to 2M FM. It's automatic and can handle a lot more traffic in a given area. Users can get messages through without much, if any, radio knowledge. The problem with cellular is it's lack of remote area coverage. But 2M is only useful in remote areas, away from home if you know what you are doing. All of this, "I can get into the so and so repeater from the far reaches of the galaxy" stuff tells me you know how to use your radio and find repeaters with their offsets and PLs. The idea of handing my wife an HT before she ventures off into the wilderness "just in case" is laughable. But I would also acknowledge that a cell phone wouldn't likely be any better.

The point is, use the means of communication that suits your requirements. If you need communications in the backcountry, ham radio will only work if you know something about it. Maybe you need an Inmarsat terminal? Maybe just a signal mirror and flares? Don't let hams tell you that amateur radio is the only "reliable means" of saving your butt when a cell phone won't work. If you are not interested in being a ham, it's not as useful as you might think.

Try this one:

http://www.ualr.edu/doc/hamualr/callsign.html

The following is an Ascii clip from that page:

U.S. Amateur Radio Club Callsign Lookup Page

This callsign database is updated DAILY and is fed directly from the FCC.
The database is at WORSE two days old. We feel it is an excellent resource
for new hams waiting for their licence and even old hams waiting for an
upgrade. Under the new rules, as soon as you know your call, you can begin
using it and its privilages.

To locate a person, fill in either:

Callsign: __________ (exact match only)

or some combination of:

Name: __________ (last name first)
City: __________ (partial allowed)
State: __________
Zip Code: __________ (partial allowed)

Maximum records to return __________

Enjoy, and 73.

: advantage over the keyers already available, but I just want to try
: it for fun.

: If anybody has done it already, I would certainly like to have a PC
: program for such a configuration. Otherwise, I would like to write a
: PC program for myself. Unfortunately, I do not have much technical
: background, and need some help. The first thing I need to know is
: how I can connect the serial port to the CW key jack. As I understand
: it, in RS-232, on state is represented by voltage between +3V and +20V
: or so, and off state is represented by voltage between -3V and -20V or
: so. How can I use this voltage to drive the HF rig for CW? I took a
: look at ICOM's manuals, but could not find any specifications.
: I would be very grateful if anybody can tell me what document I should
: check. Thanks!

: 73, Yuzuru Suzuki, AA1JA (e-mail: ys@isr.harvard.edu)

The program Supermorse can be used to key your HF rig. I did that
using the serial port with a buffer transistor installed in the
DB25 connector. Connect to the key jack. Type at the keyboard.
Great for those with lousy fists.

This is not a bad idea. Based on this, if people sent me their
stories, reports, etc (text-only, no pictures), I'd be happy to put
together a Field-Day scrapbook on the Web.

More details to come...

Following is a copy of packet bulletin which appeared on the VK packet network yesterday. Not only is our SMA content to impose big increases in license fees on us, but they also wish to stifle experimentation.

I spoke on the phone to a Councillor of the VK6 Division of the WIA last night, & according to him, the new draft regulations (which are currently going through Federal parliament) is full of gobbledegook which makes for tough reading. Makes me wonder how those poor sods trying to get a license are going to fare. I know it's tough for them having to study for the thoery let alone having to do a law degree to understand the regs!

From: VK6UU@VK6BBS.#PER.#WA.AUS.OC
To : REGS@VKNET

NEW LICENCE CONDITIONS
MAY 1995

Having read a DRAFT copy of the new licence (new regs) conditions minus any direct reference to repeater regulations, I was disappointed to read the following....

RESTRICTIONS ON CONNECTION TO A PUBLIC TELECOMMUNICATIONS NETWORK

A Licensee must not connect an amateur station to a public telecommunications network when the licensee operates the station in:

(a) Automatic mode (including, for example, packet mode and radioteletype mode) or
(b) Computer controlled mode (including, for example, packet mode and radioteletype mode).

I take this to mean that any packet system working through a worm hole will be illegal when the new licence conditions become law. My understanding of public telecommunications network is Telecom. Private companies that operate their own ties go via Telecom in one way or another. Is my understanding correct...?

From: Jack Mott <jackm@pmafire.inel.gov>
Message-ID: <Pine.HPP.3.91.950505163454.16164A-100000@pmafire.inel.gov>
Source record: 247088

In response to Mr. Humphries posting (too long to reproduce here), he is correct that prices can change between the time an ad is placed and a magazine is printed. However, this is no reason not to publish a price. Many readers would like to track the market over time, and it would be nice to do this without having to call a dealer. Once a person gets the resolve to make a purchase, he should call several dealers to see what market prices are.

In general, commerce in this country requires the skill of a carpet merchant. We used to only have to negotiate for cars and houses. Now we must do so when we check into a hotel or purchase items of only moderate value. I don't have the energy for this, but that is good -- I make fewer purchases and spend less money owing to lack of confidence in the retailers I deal with.
